From: Moylan, James (J.J.)
Sent: Wednesday, September 18, 2013 11:25 AM
To: Bushman, Thomas (T.S.); Rinkevich, Daniel (D.J.)
Subject: EGT EOL repairs at KTP

See the 'combined' for this pie chart.

Comments:

- I complied these VINs by pulling from ECATS
- There is also a file compare on the combined tab of the returned sensors to Stoneridge versus the list of EOL failures. There were no matches.
- Note that when I bin a claim, I check ECATS and if there is an EOL failure, I pull the repair in QLS. These are then bin to Plant Process as a bad repair.

To: Rinkevich, Daniel (D.J.)
Subject: EGT Sensor Claims Count

Dan, latest pivot table pull showing claims counts for ETG sensor. The cutoff in mid Dec is looking less compelling. At least two of the sensors from Jan production were confirmed failed at Stoneridge. Will need to understand more about the failure mode of the other Jan/Feb sensors.

Subject: FW: egt TIS chart
Attachments: EGT_3_6MIS.JPG

Dan, attached is the EGT R/1000 chart I will plan to annotate with corrective actions per Monday's EGT discussion with the plant. Could you help with the dates for the key calibration (monitor) changes – this would help to provide clarity on the impact of monitor changes on warranty (I suspect will be little impact).

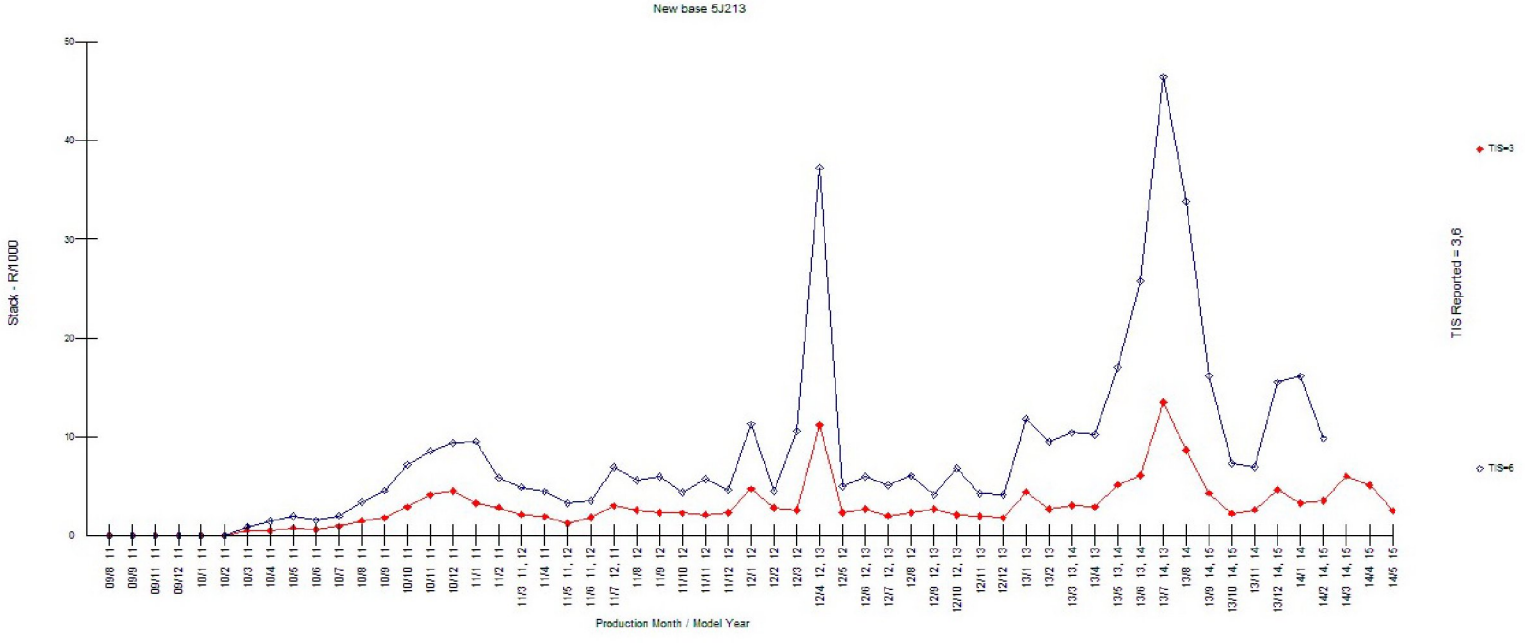

Scot, do you have effective dates for the EGT RTD fixes Stonebridge has implemented?

I think the EGT changes since the 6.7L launch will be in three areas:

- Monitor Changes
- RTD Weld Improvements
- Harness Crimp Improvements

Subject: RE: SuperDuty EGT Replaced

Hello James,

Please see the below graphs summarizing the current return part analysis. These are the latest values that I have. Today I have a meeting with the supplier, If there is an update I will share it with you.

For the TNI resolution, weekly meeting is being done by the lead of Daniel Rinkevich.

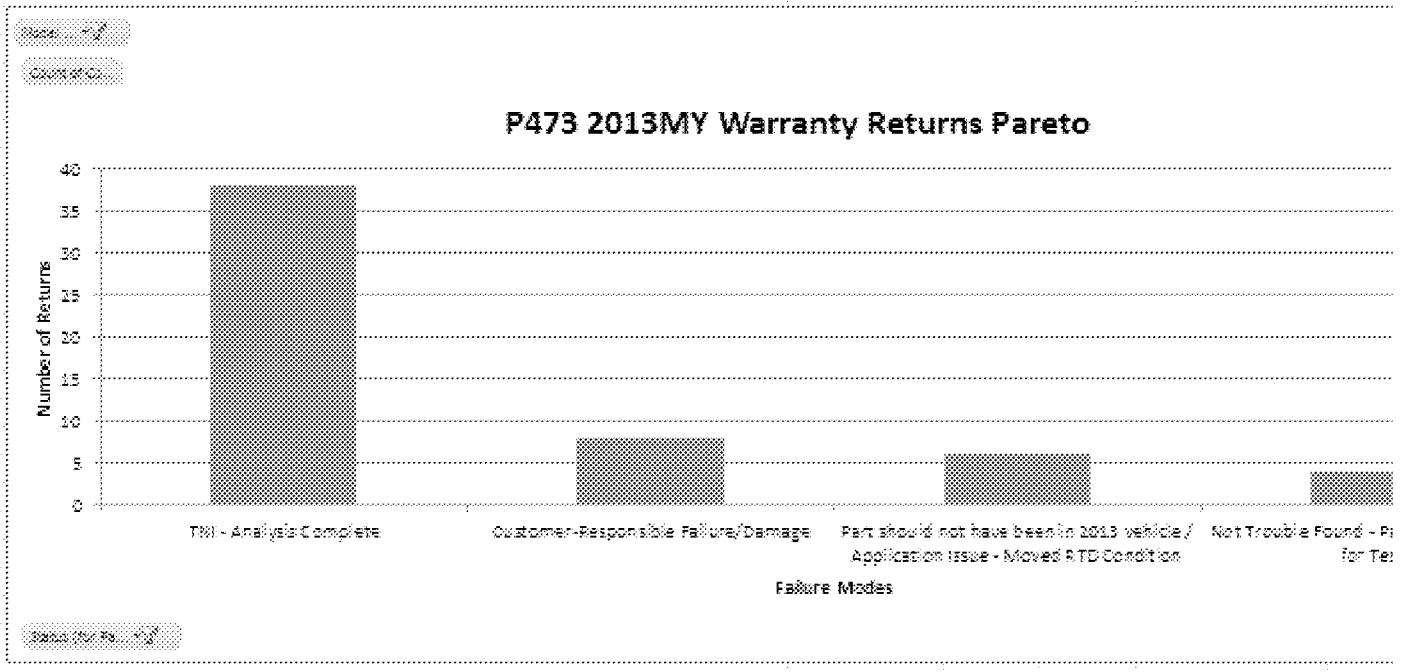

The TNI resolution issue is traced by SAQ2013257933. James Moylan added me to that project today. I will do an update to the project about the issued second FAV for the EGTs as Thomas Bushman's request.

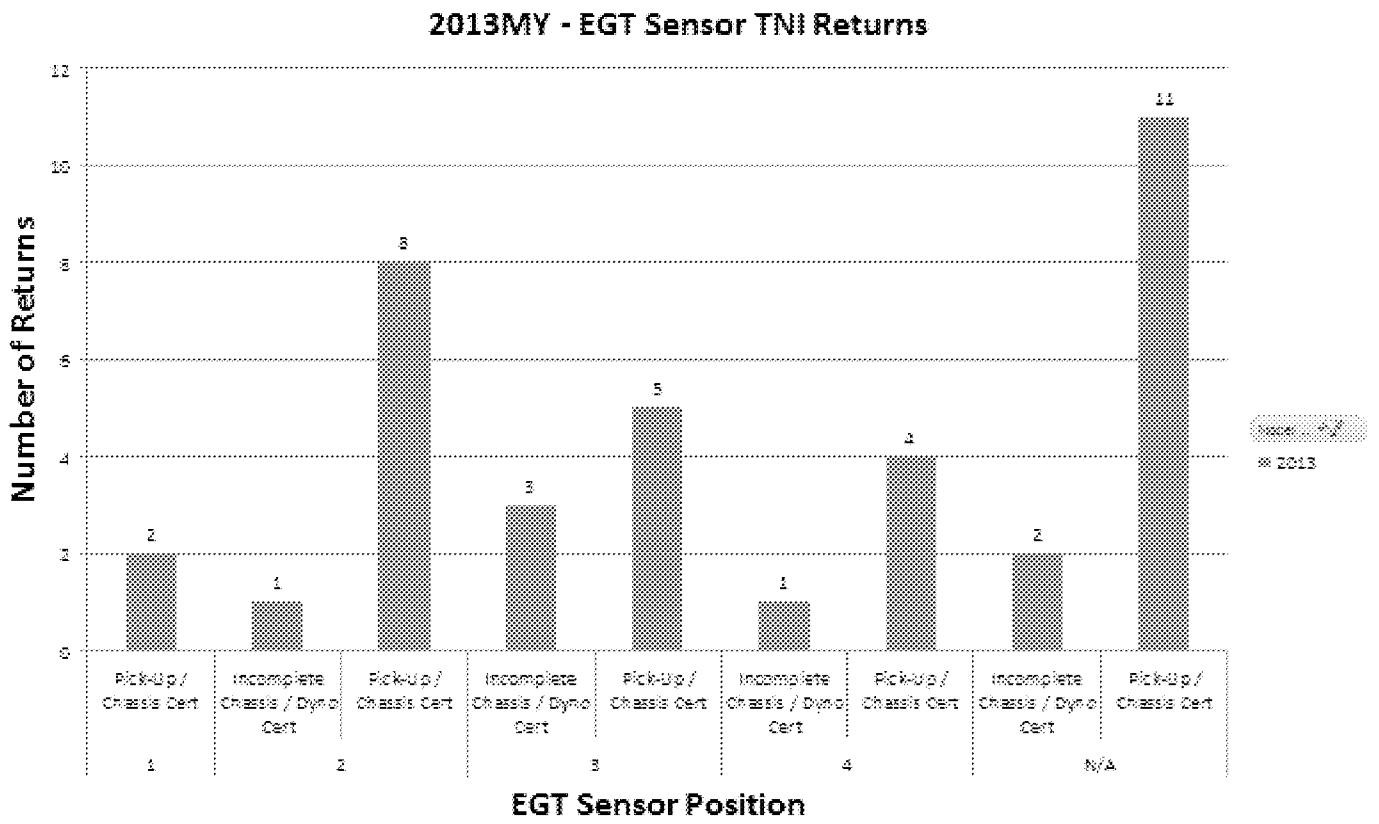

Thanks,

Best regards.

Subject: SuperDuty EGT Replaced

- 28 parts replaced since Oct 2012 cutoff
- Per BSAQ241700, 11 have been TNI, what was root cause on the 17 remaining?
- Have these been returned and analyzed?
- Do we need to turn on Prior approval or FAV to aide in the containment root cause understanding of this issue?
- Is there a specific vehicle config that is most prominent in this population?
- Or a specific sensor location that is more problematic?
- What are the next steps for driving this to closure?
- What help is needed?

Subject: RE: 2013 MY Diesel EGTs

I'll get a new request set up today 2013MY 5J213 shipped to Stoneridge.

Below is against 6.7 Super Duty

Subject: RE: 2013 MY Diesel EGTs

I believe we do NOT have in a request for older MY sensors. Want us to put one in ASAP? 13MY for a few weeks/months until we understand if the latest claims are broken or TNI.

Rob, can you submit request and let Jeff know that we'll have a few extras for analysis?

Ibrahim, do you still manage EGT sensors? Any higher TIS issues that you are aware of?

Thanks!!

Subject: 2013 MY Diesel EGTs

2013 MY EGT claims counts getting very high – over 2100. Most of the 2013 claims are higher TIS (average 12K miles but many out to near end of 60K warranty). About half of these claims have come in over the past 5 months.

Looks like about a 10% repeat repair rate, but some of these repeats are for different EGT locations.

Dan, are we getting these higher TIS EGTs back for inspection? Not clear whether our "99%" TNI rate was based on lower mileage sensors from earlier in the MY.

Subject: RE: EGT R/1000 by East / West

Rob, thanks.

R/1000 looks 2X higher in wetter east Texas. Would be interesting to see the R/1000 by month of repair – this is not a simple analysis though.

Subject: RE: EGT spend trends

Looks like the "peak to peak" values not much different between east and west. Absolute spend value much less in the west. Any way to get a normalized r/1000 at say 6 or 9 MIS comparing east and west?

<< File: Texas Spend breakdown.xlsx >>
I cut this using an area code map of Texas, splitting east and west… Both appear pretty wavy… only the East end seems more flat for the 14MY (more months with higher spend, as compared to West

Subject: RE: EGT spend trends

Looking just at Texas is a great idea.

If you believe water quenching is the source for thermal shock, you could compare east and west Texas. Much wetter in east Texas (although when is does rain in more arid West Texas, may get equal or more "pudding" due to slower run off).

We did this before looking at CAC misfire – much higher rate in more humid/wet east Texas.

Subject: EGT spend trends

I made a note a while ago (and then forgot) that I wanted to review the spend trend/ Oct peak of EGTs more closely. It's even more dramatic in 14CY than previous years but always there.

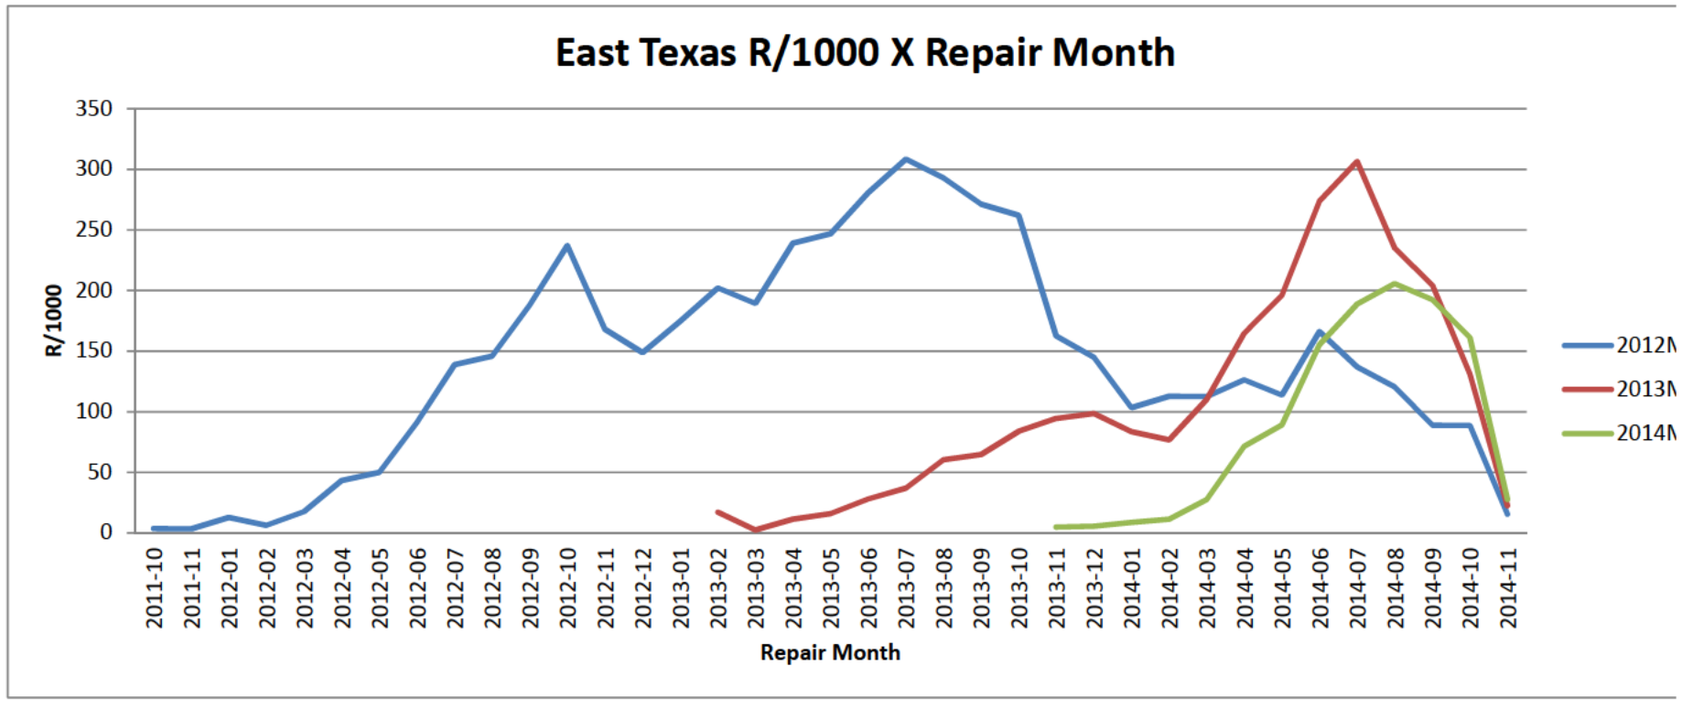

We've kicked around the idea that it's related to ambient temp but I asked Rob to pull spend by load month for only TX claims where the ambient temps are significantly more stable at least in winter. The trend is still present. Thoughts?

<< File: 5J213 Spend by Load Month in TX.xlsx >>
Perhaps it's related to hot temps and not cold. Would CAN claims be a similar comparator to see if less hot in summer equates to fewer EGT claims?

In a few months these should tell us if the harness crimping has been effective.

If we don't see some improvements from the harness crimping late in the year, then we need to move forward with doing something to improve the sensor crimps.

Importance: High

Per Bill's request, Rob created a fireworks chart for 5J213, R/1000 by TIS. There's an overall chart and then a separate one for dyno and chassis cert (1FT/1FD) for last 4 MYs.

I know the point was to see how things are going in 11&12MY, but I don't see much improvement for 13&14MY…especially given that we resolved a major HW issue. Thoughts?

Rob, thanks!

If I'm reading the parts coverage correctly, it's 5/50 federal coverage, 5/100 for CA. Probably hitting mileage limit by 4 yrs.

Subject: EGT Sensor Claim After Dec Connector Crimp Contatinment

Looks like we have an new EGT sensor claimr with a January build date. Vin is 1FT7W2BT3EE[redacted]

The other sensor with a Jan vehicle build date was confirmed sensor weld issue per earlier discussion.

Cynthia, can you pull FF and other DTCs for this VIN.

Jeff, I assume you don't yet have this sensor back from the dealer?

Tim,
Interesting. There are more P246E and P2080 have become more popular. Are the DTCs changing over time? Or by regional location? Do the repair types change due to hot weather vs. cold weather or location?

Sue I am analyzing the most recent pivot table data to assist with determining the diesel EGT sensor root cause. Below this email is a pareto chart displaying the top EGT sensor DTCs. I looked into the technician comments and found that the majority of them are faulty sensor claims and not that the exhaust is overheating.

Dan,

We have received the 1FT7W2BT6EE[redacted]part. What is strange that this was from a 2014 truck but the part returned is from July of 2012. So it is before many of the fixes but don't know how it was still around at KTP to be put in this truck. We have just begun analysis of this part.

Looking just at Texas is a great idea.

If you believe water quenching is the source for thermal shock, you could compare east and west Texas. Much wetter in east Texas (although when is does rain in more arid West Texas, may get equal or more "pudding" due to slower run off).

We did this before looking at CAC misfire – much higher rate in more humid/wet east Texas.

Subject: EGT spend trends

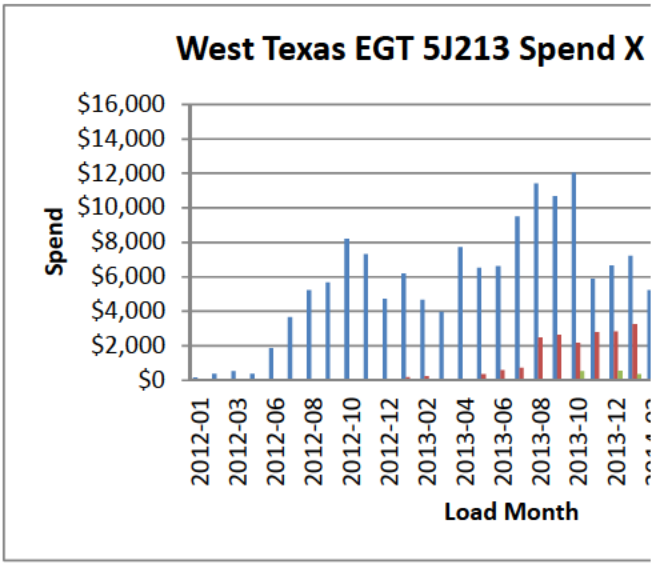

I made a note a while ago (and then forgot) that I wanted to review the spend trend/ Oct peak of EGTs more closely. It's even more dramatic in 14CY than previous years but always there.

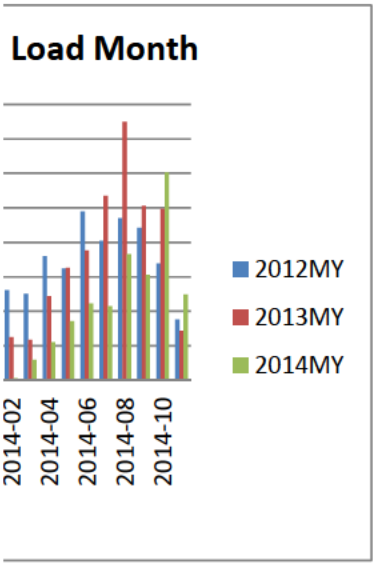

We've kicked around the idea that it's related to ambient temp but I asked Rob to pull spend by load month for only TX claims where the ambient temps are significantly more stable at least in winter. The trend is still present. Thoughts?

<< File: 5J213 Spend by Load Month in TX.xlsx >>
Perhaps it's related to hot temps and not cold. Would CAN claims be a similar comparator to see if less hot in summer equates to fewer EGT claims?

Looks like the "peak to peak" values not much different between east and west. Absolute spend value much less in the west. Any way to get a normalized r/1000 at say 6 or 9 MIS comparing east and west?

Mark / Cynthia –

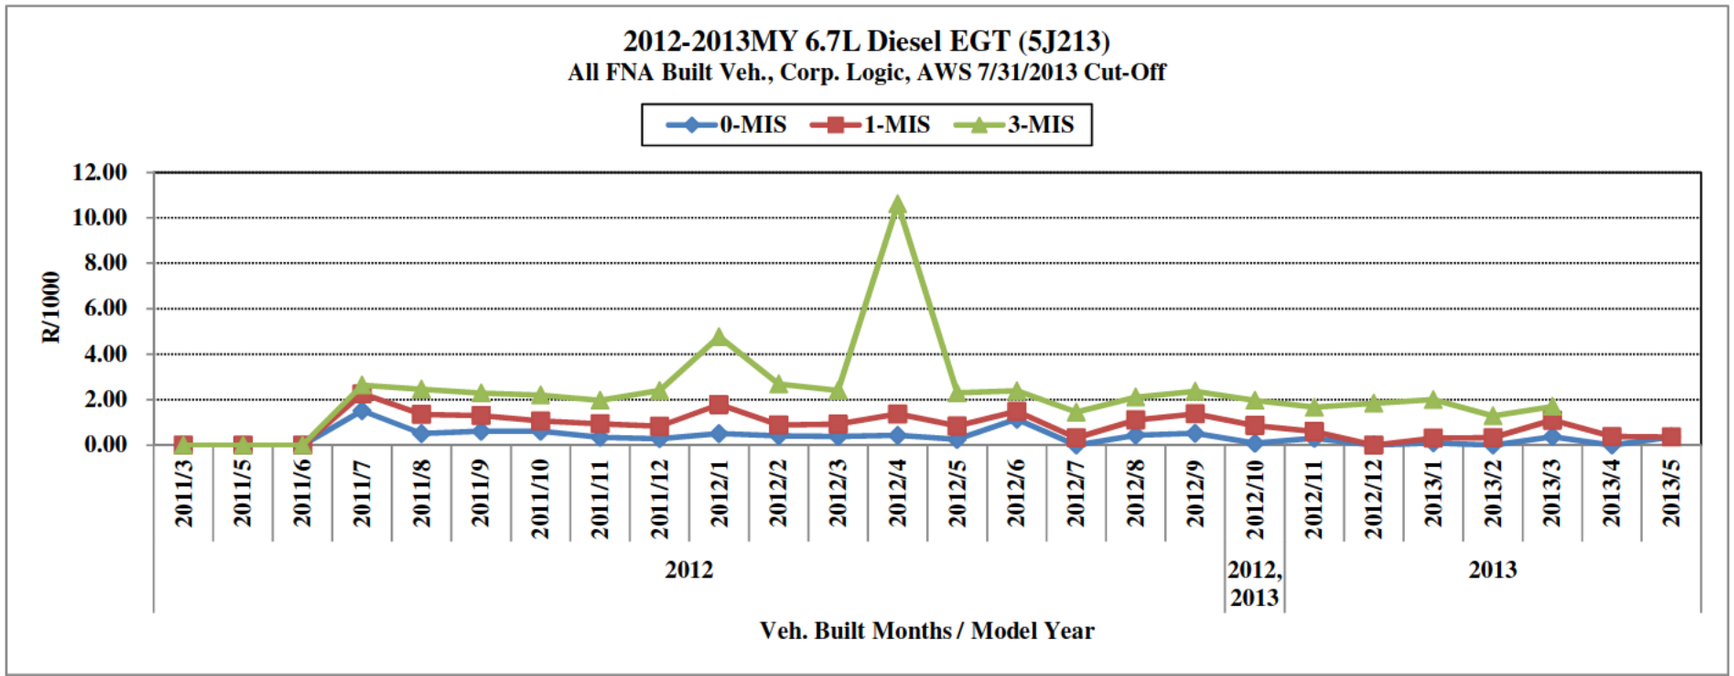

We have the P473 VQR coming up this week and we need your help for an updated version of this warranty report for the EGT and NOx Sensor.

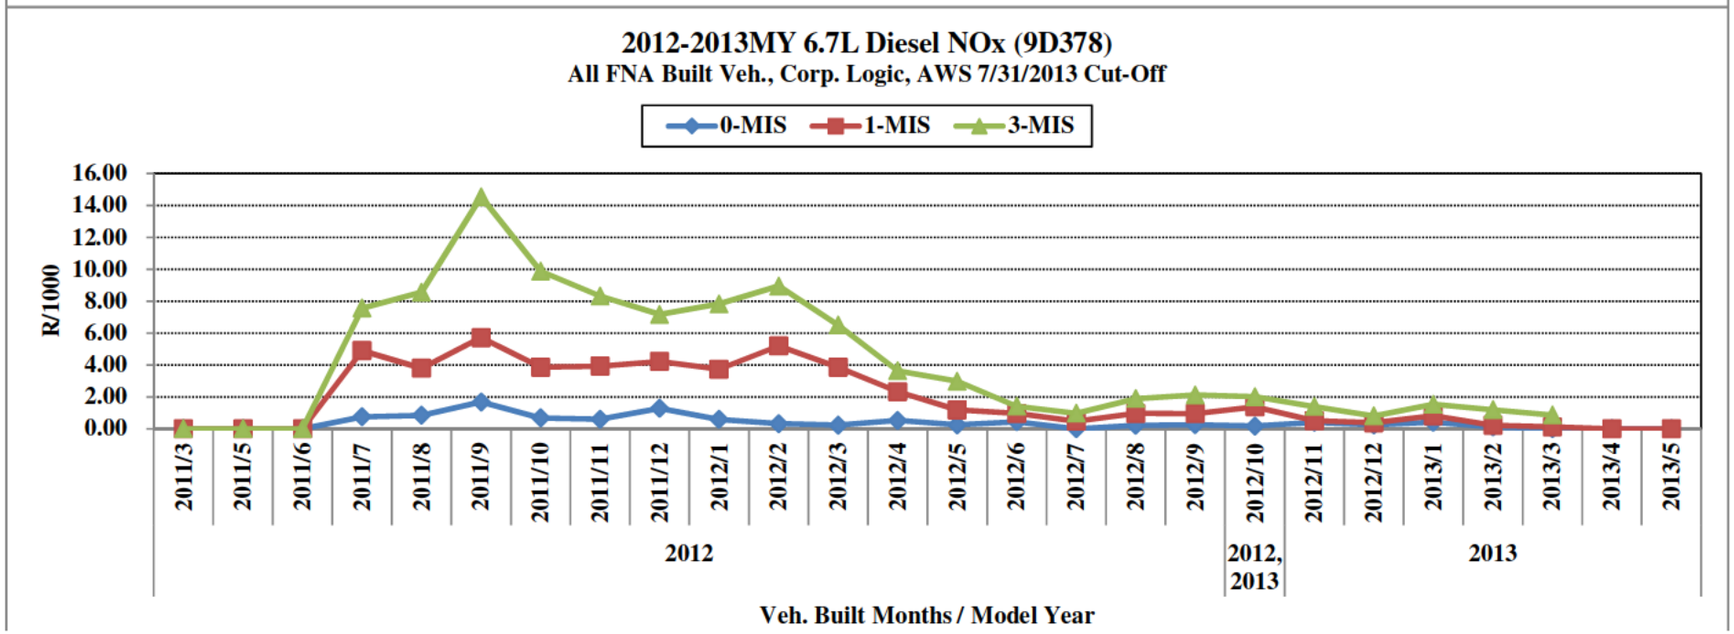

Do you remember who ran this for us? Could you please have this re-run again with the same parameters? Sorry for the short fuse – thanks.

Sent: Wednesday, April 09, 2014 4:18 PM
To: Dixon, Mark (M.R.)
Subject: UNTITLED.pptx

Mark,
A couple of powerpoint slides to help with the wiring presentation.

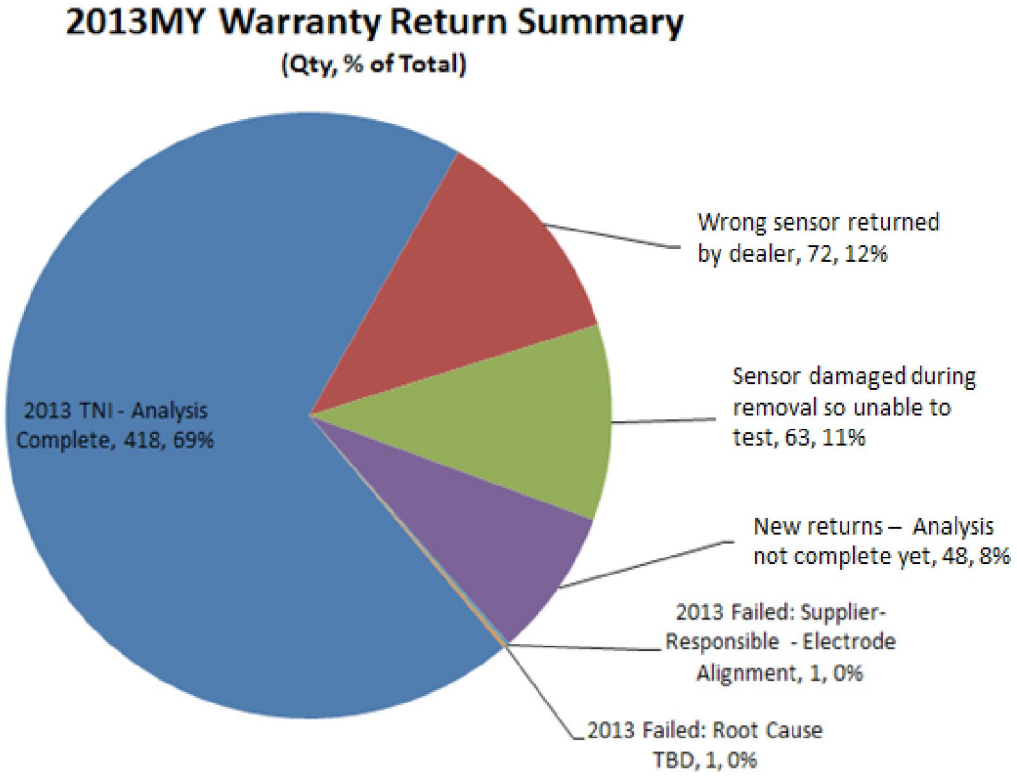

1. EGT sensor failure rate
2. How to identify latest sensor by part number.

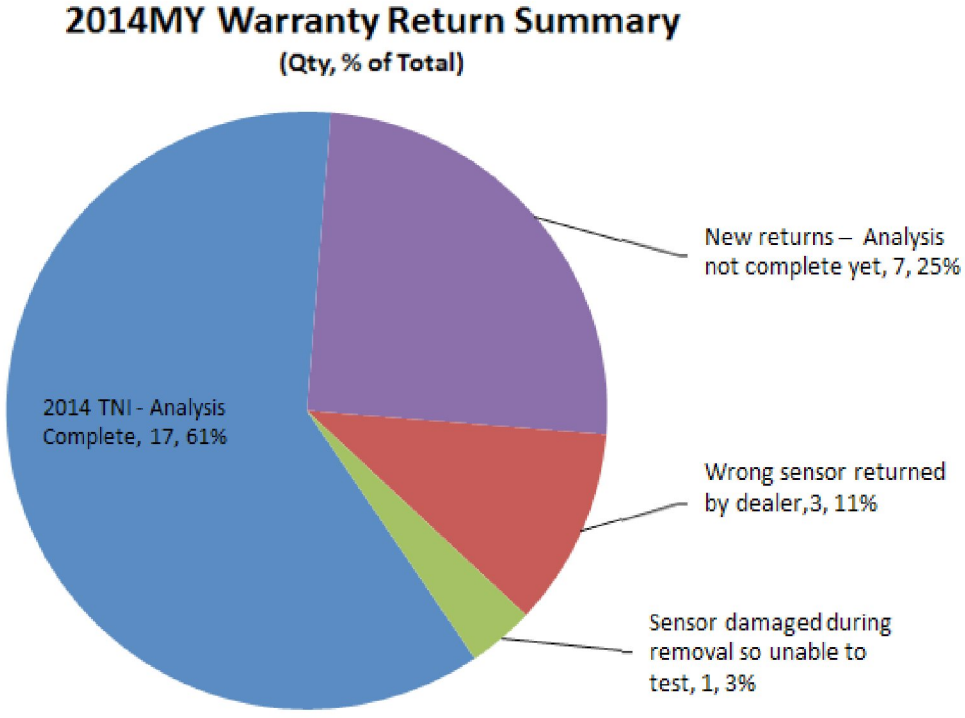

UNTITLED.pptx

Since 2013MY EGT Sensors Have Shown To Be Very Robust

- Despite a battery of tests less than 0.5% of 2013MY to 2014MY returned EGT sensors have had any issue.

How to Identify EGT Sensors

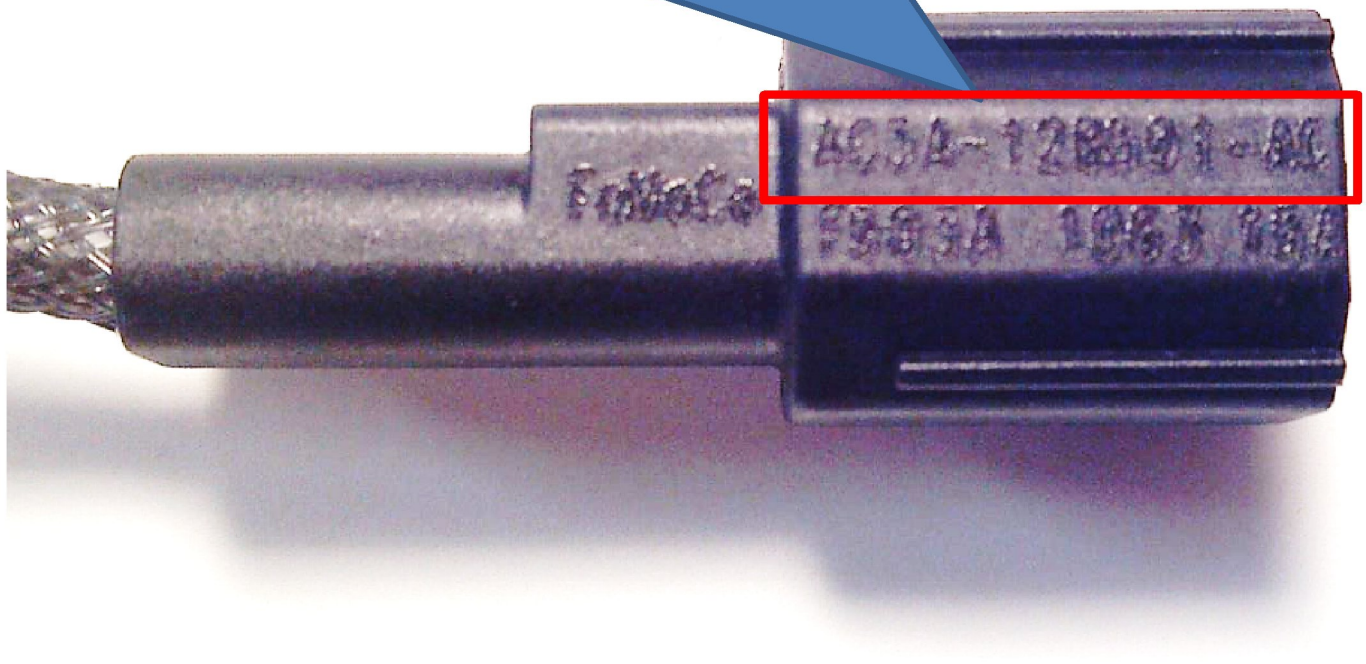

Part Number etched on Connector as shown

2013MY – “Clean” Sensors:

- AC3A-12B591-AC
- AC3A-12B591-BC

Previous Revisions:

AWS cut-off 2/29/2012

From: Hutchinson, Rob (R.)
Sent: Friday, August 30, 2013 9:56 AM
To: Bushman, Thomas (T.S.); Rinkevich, Daniel (D.J.)
Cc: Wagers, Sue (S.K.)
Subject: 2013 EGT wire repair claims

Highlighted in yellow. This is a fresh AWS run today. There were no 2013 where a sensor was hung and then had a wire repair. Several wire repairs…

There were some questions yesterday in the GGRG…

- What sensor malfunction will cause shut down (11, 12, 13, or 14)?
- Is there a difference in strategy between chassis and dyno cert to cause shut down?

Rob Hutchinson

Subject: 6.7L Warranty

Hello Norm,

Below is the warranty trend of **EGT sensor** of supplier Hi-Stat. Can you please let me know if there have been any major calibration change at those times we see peek? (Jan 2011, Nov 2010 [both 11&12MY])

Regards,
Bora Erginer

From: Rinkevich, Daniel (D.J.)
Sent: Thursday, January 22, 2015 5:38 PM
To: Goodwin, William (W.R.)
Subject: Calculation of R/1000 for "AND" strategy

Bill,
I went through the freeze frame data for 2011MY and 2012MY vehicles. 99% is for only one sensor. 1% is for multiple sensors.

Number of Failed Sensors	Quantity	Percent
1	16794	98.89%
2	30	0.18%
3	19	0.11%
4	140	0.82%
Total	16983	100.00%

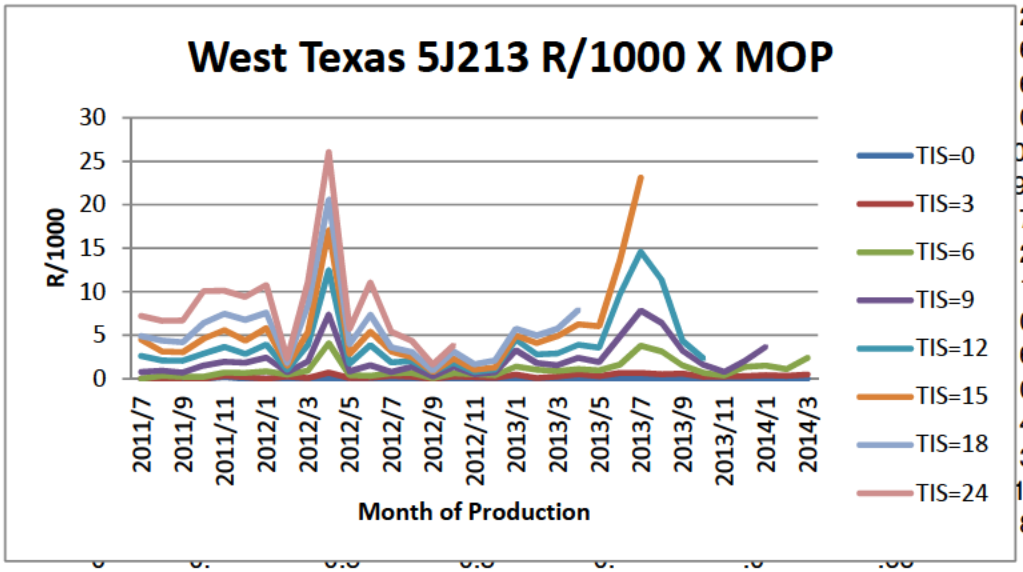

Dan Rinkevich
Powertrain Quality
(313) 32-23653 (Desk)
(313) 676-9572 (Cellular)

Subject: Diesel 6.7L V29 Top 25 DTC (Diesel Quality Review)

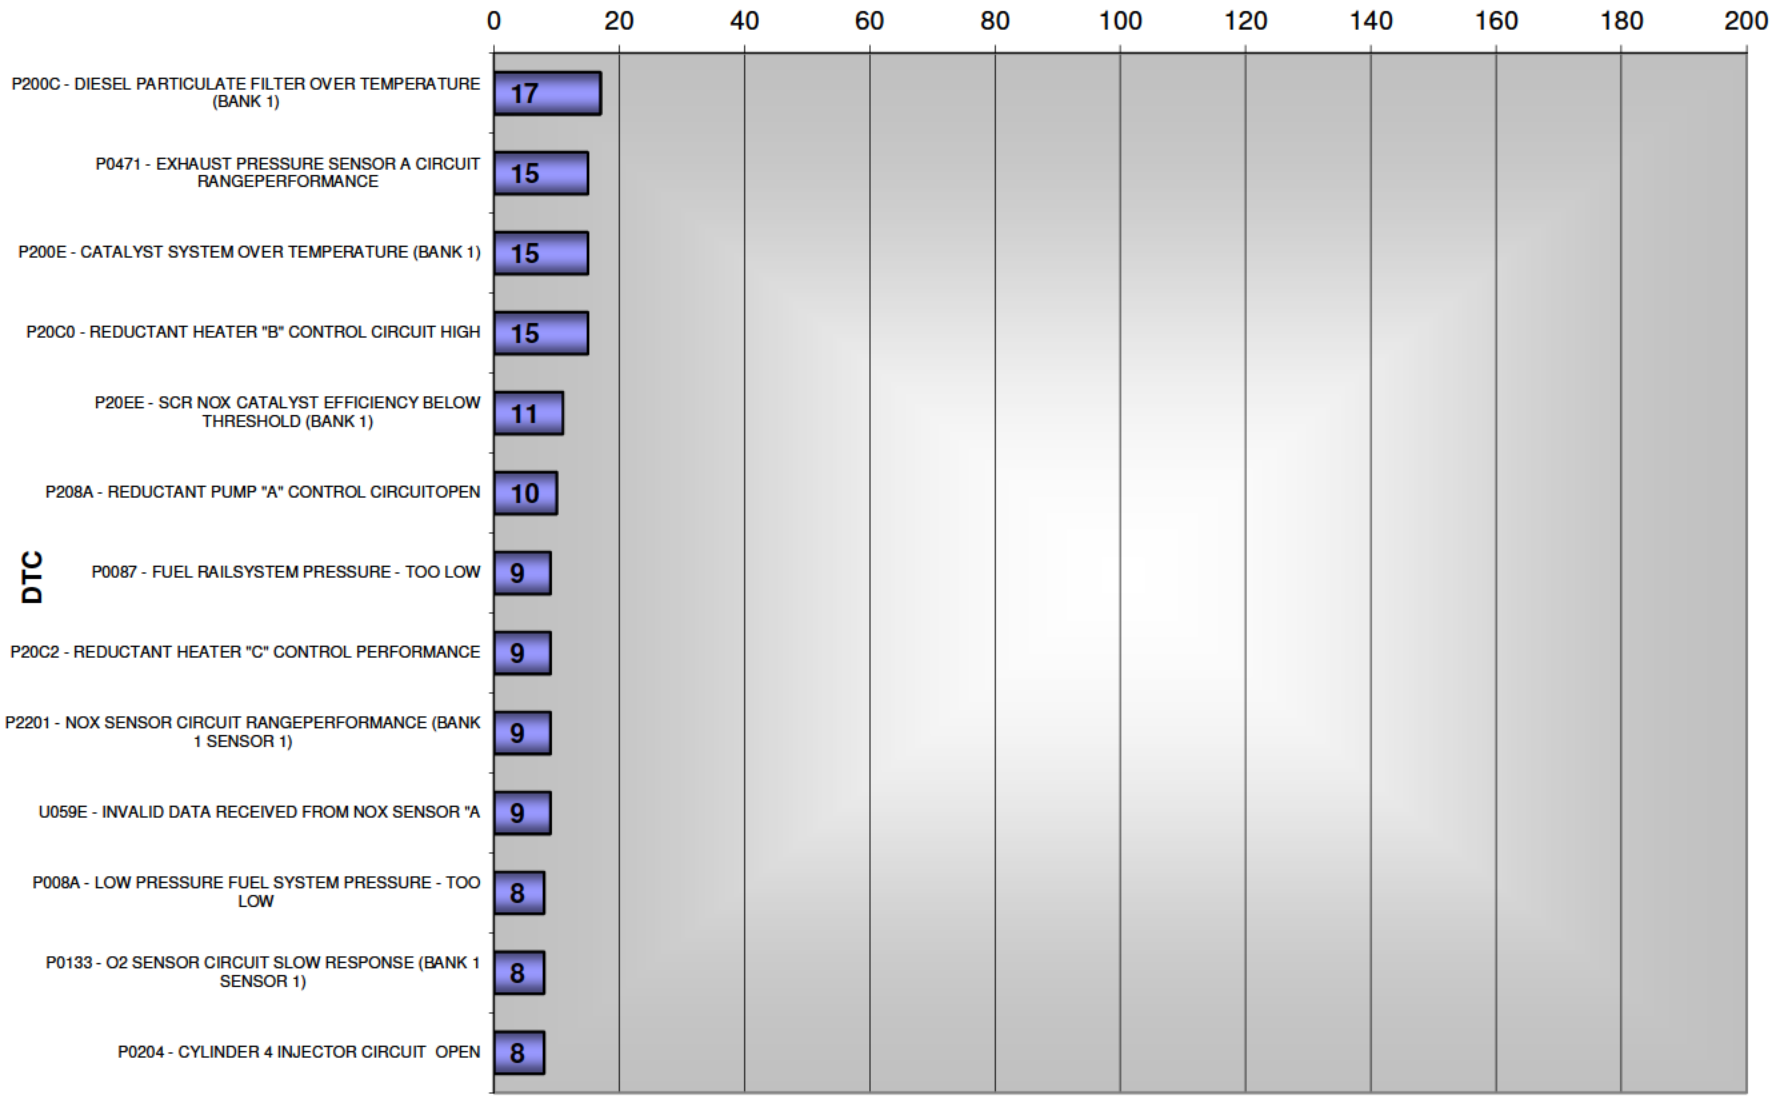

Here is the V29 Top 25 DTC's for March (AWS cut-off 2/29/12) for this Fridays Diesel Quality Review.

2012MY P473 6.7L Top 25 (13-25) V29 DTC Claims

AWS cut-off 2/29/2012

P204F - REDUCTANT SYSTEM PERFORMANCE (BANK 1)	194
P164A - O2 SENSOR POSITIVE CURRENT TRIM CIRCUIT PERFORMANCE (BANK 1 SENSOR 1)	178
P2200 - NOX SENSOR CIRCUIT (BANK 1 SENSOR 1)	103
P0181 - FUEL TEMPERATURE SENSOR A CIRCUIT RANGEPERFORMANCE	65
P207F - REDUCTANT QUALITY PERFORMANCE	60
P2A00 - O2 SENSOR CIRCUIT RANGEPERFORMANCE (BANK 1 SENSOR 1)	56
P2209 - NOX SENSOR HEATER SENSE CIRCUIT RANGEPERFORMANCE (BANK 1 SENSOR 1)	28
P220E - NOX SENSOR HEATER CONTROL CIRCUIT RANGEPERFORMANCE (BANK 1 SENSOR 1)	26
P208E - REDUCTANT INJECTION VALVE STUCK CLOSED (BANK 1 UNIT 1)	20
P20BC - REDUCTANT HEATER "A" CONTROL CIRCUIT HIGH	20
P20BD - REDUCTANT HEATER "B" CONTROL CIRCUITOPEN	19
P20E8 - REDUCTANT PRESSURE TOO LOW	19
P200C - DIESEL PARTICULATE FILTER OVER TEMPERATURE (BANK 1)	17
P0471 - EXHAUST PRESSURE SENSOR A CIRCUIT RANGEPERFORMANCE	15
P200E - CATALYST SYSTEM OVER TEMPERATURE (BANK 1)	15
P20C0 - REDUCTANT HEATER "B" CONTROL CIRCUIT HIGH	15
P20EE - SCR NOX CATALYST EFFICIENCY BELOW THRESHOLD (BANK 1)	11
P208A - REDUCTANT PUMP "A" CONTROL CIRCUITOPEN	10
P0087 - FUEL RAILSYSTEM PRESSURE - TOO LOW	9
P20C2 - REDUCTANT HEATER "C" CONTROL PERFORMANCE	9
P2201 - NOX SENSOR CIRCUIT RANGEPERFORMANCE (BANK 1 SENSOR 1)	9
U059E - INVALID DATA RECEIVED FROM NOX SENSOR "A	9
P008A - LOW PRESSURE FUEL SYSTEM PRESSURE - TOO LOW	8
P0133 - O2 SENSOR CIRCUIT SLOW RESPONSE (BANK 1 SENSOR 1)	8
P0204 - CYLINDER 4 INJECTOR CIRCUIT OPEN	8

Subject: Diesel Quality Review Top DTC's

All, for 2012CY the Diesel Quality Reviews on Friday will include Monthly Warranty Reviews based on Top DTC's/Parts. At last Fridays Diesel Quality Meeting the Top 2012MY DTC Claims were presented and names were assigned to who owns the DTC's (Chart attached below). If you are responsible for a DTC below we will need you to review and respond with what is driving the issue (calibration, sensor, wiring, etc…). Zip file contains all warranty claims by Tab/DTC. The goal will be to annotate the slide in PowerPoint for each issue. Thanks

Bars show how much more frequently seen in summer than in winter

Highlighted monitors run only at start-up after a 6 hour soak

NOx monitors do a temp compare with EGT14

Bold monitors run continuously

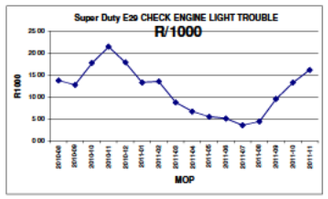

Conclusions:

1. Start-up monitors are largely responsible for seasonal effects
2. Start-up monitors are responsible for most of warrantee

Production Corrective Actions Planned/Implemented:

- Improved weld processes: 3/16/11
- Lead alignment improvements: 4/27/11 and 9/8/11
- Change in powder fill to reduce RTD movement during rapid cooling: 13MY Job1- 10/22/12
- P2210/P229E Change Compatibility test to Non-MIL: 11/6/13
- Rolled MI Cable wire lead- 12/5/13
- Lear 14406 EGT Body Side Harness crimp improvements: 12/15/13
- P06EA-P06EB Calibration content: 2014MY Job1- 7/15/13
- Ultrasonic Weld RT, RTD Weld, MI Cable & MI Terminal Circuits- 12/16/14

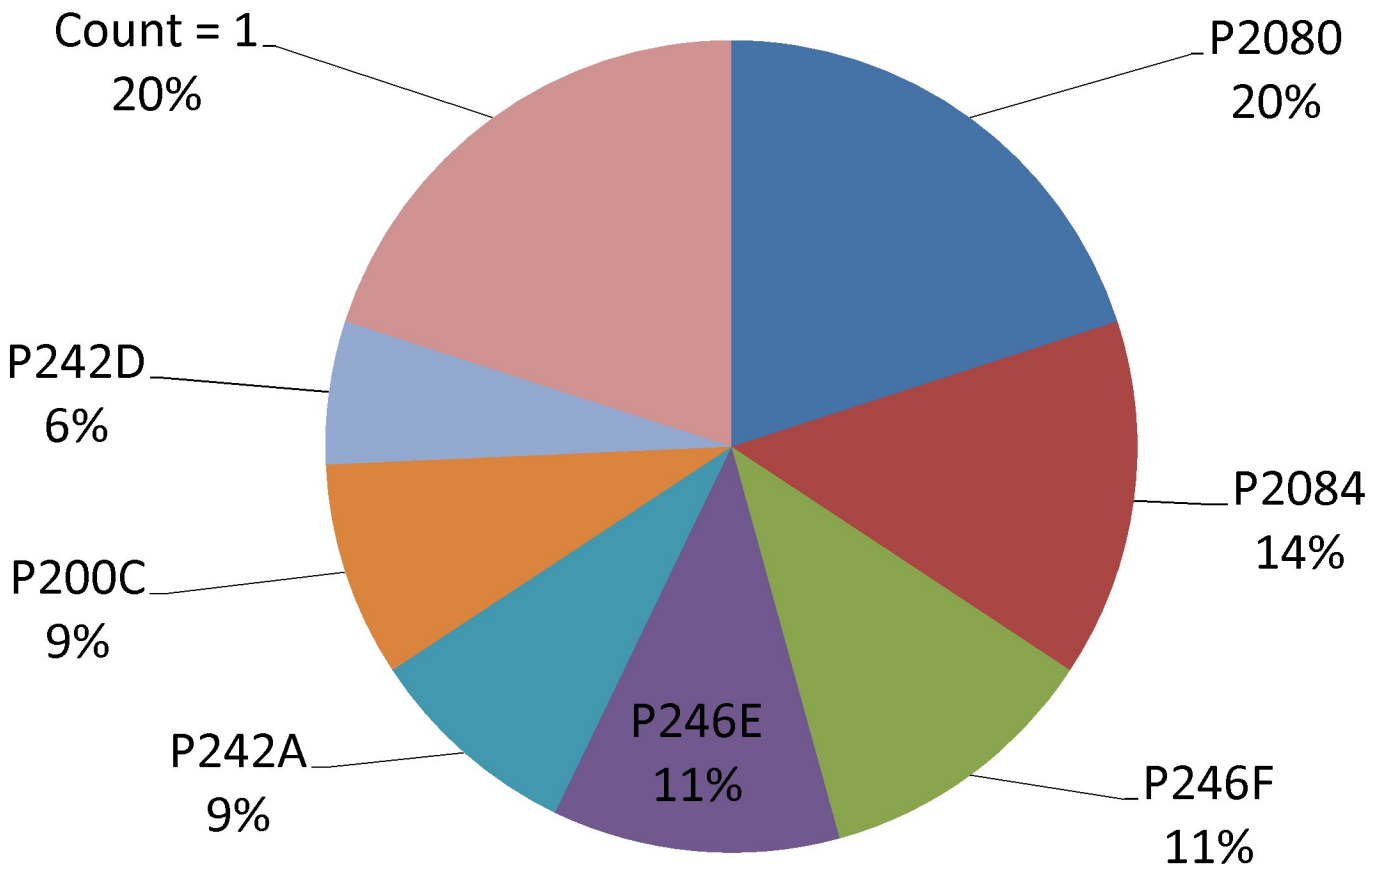

EGT Claims by Location

Subject: EGT Claims

As more data comes in (chart below from pivot table pulled Friday), it looks like significant EGT improvement in Sept/October, and another improvement in Mid Dec (most Dec claims before Dec 15).

Still a significant lingering number of EGT claims – I believe most of these sensors are testing open circuit? Has Jeff Philbin provided the lasts return part analysis on the post Dec build dates?

Subject: EGT Production and Service Actions 21 Jan 15.xlsm
Attachments: EGT Production and Service Actions 21 Jan 15.xlsm

Here is the updated chart. I did correct some errors in the table, but the most important information is our improvement numbers are based on actual field data analysis and our projection is final state for all improvement actions to be 1.5R/1000. Some key items to note:

1. Baseline R/1000 is a current state (FUL might be a 3x multiplier)
2. The vehicles without the 2 sensor rationality are projected as 40R but this would need further evaluation

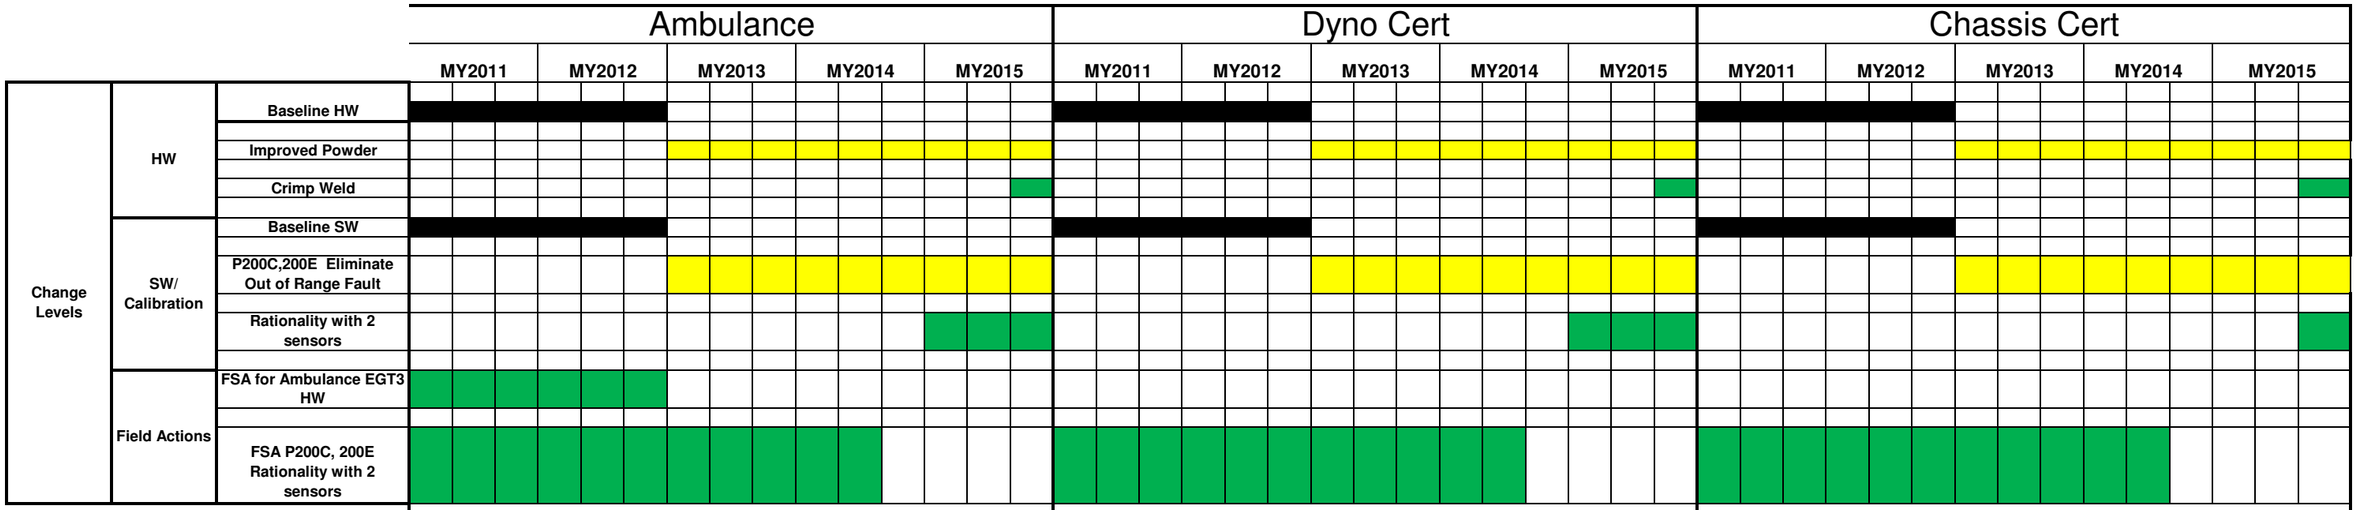

Next steps are to determine if we want to engage Vasilly prior to the meeting with Phil on Friday or after.

Dan R. ---could you possibly split the data for current R/1000 into Chassis, Dyno and Ambulance so we can have actual numbers in this field rather than the total composite?

Subject: EGT Repeat Repair Rates

Dan, below are the EGT repeat repair rates from studies we have done. These are repeats in the same EGT location.

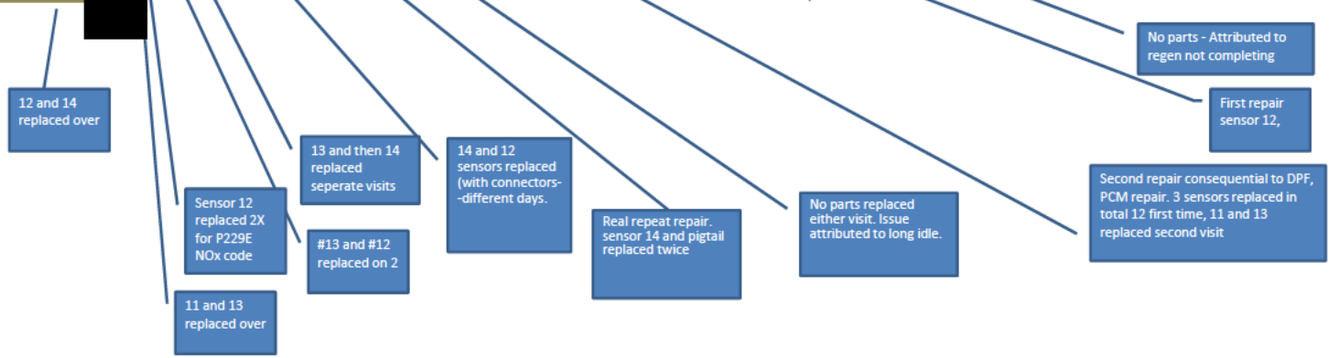

- 2013/14 MY where Harness Connector was first repair (this was a "short term" RR analysis – would expect this number to mature up): **18%**

- 2011/12 MY where EGT was first repair (longer term RR analysis with mature metric): **0.4%**

- 2013 MY where EGT was first repair (also fairly mature metric): **0.9%**

Subject: EGT Sensor Spend

Attached is the EGT sensor spend summary we reviewed this morning. I highlighted in yellow the claims that have DTCs already covered by the two TSBs.

Need help identifying additional DTCs that need to be added to the "go directly to sensor replacement" TSB. With a quick scan, looks like we should addd P242A, P242C, and P249F. I did not look these DTCs up to determine whether they are all related to the EGT circuit.

Please scan attached to see if there are additional DTCs that should be added.

Thanks.

From: Love, Keith (K.A.)
Sent: Thursday, August 29, 2013 4:16 PM
To: Wickenheiser, Francis (F.J.); Oswalt, Greg (G.G.); Schultz, Matthew (M.J.)
Subject: F Super Duty EGT

Here is the completed R/1000 chart for ambulance and stripped chassis. Truck is TBD, but per our meeting today, it is likely to be similar.

Matt, the file is at W:Gasc/common/fudge/CDR Search/6.7L F Super Duty EGT/ Stripped Chassis Only 2.xls

Call me on cell if you care to discuss.

Subject: Feb AWS Top 25 6.7L DTC Pareto (AWS cut-off 1/29/2012)

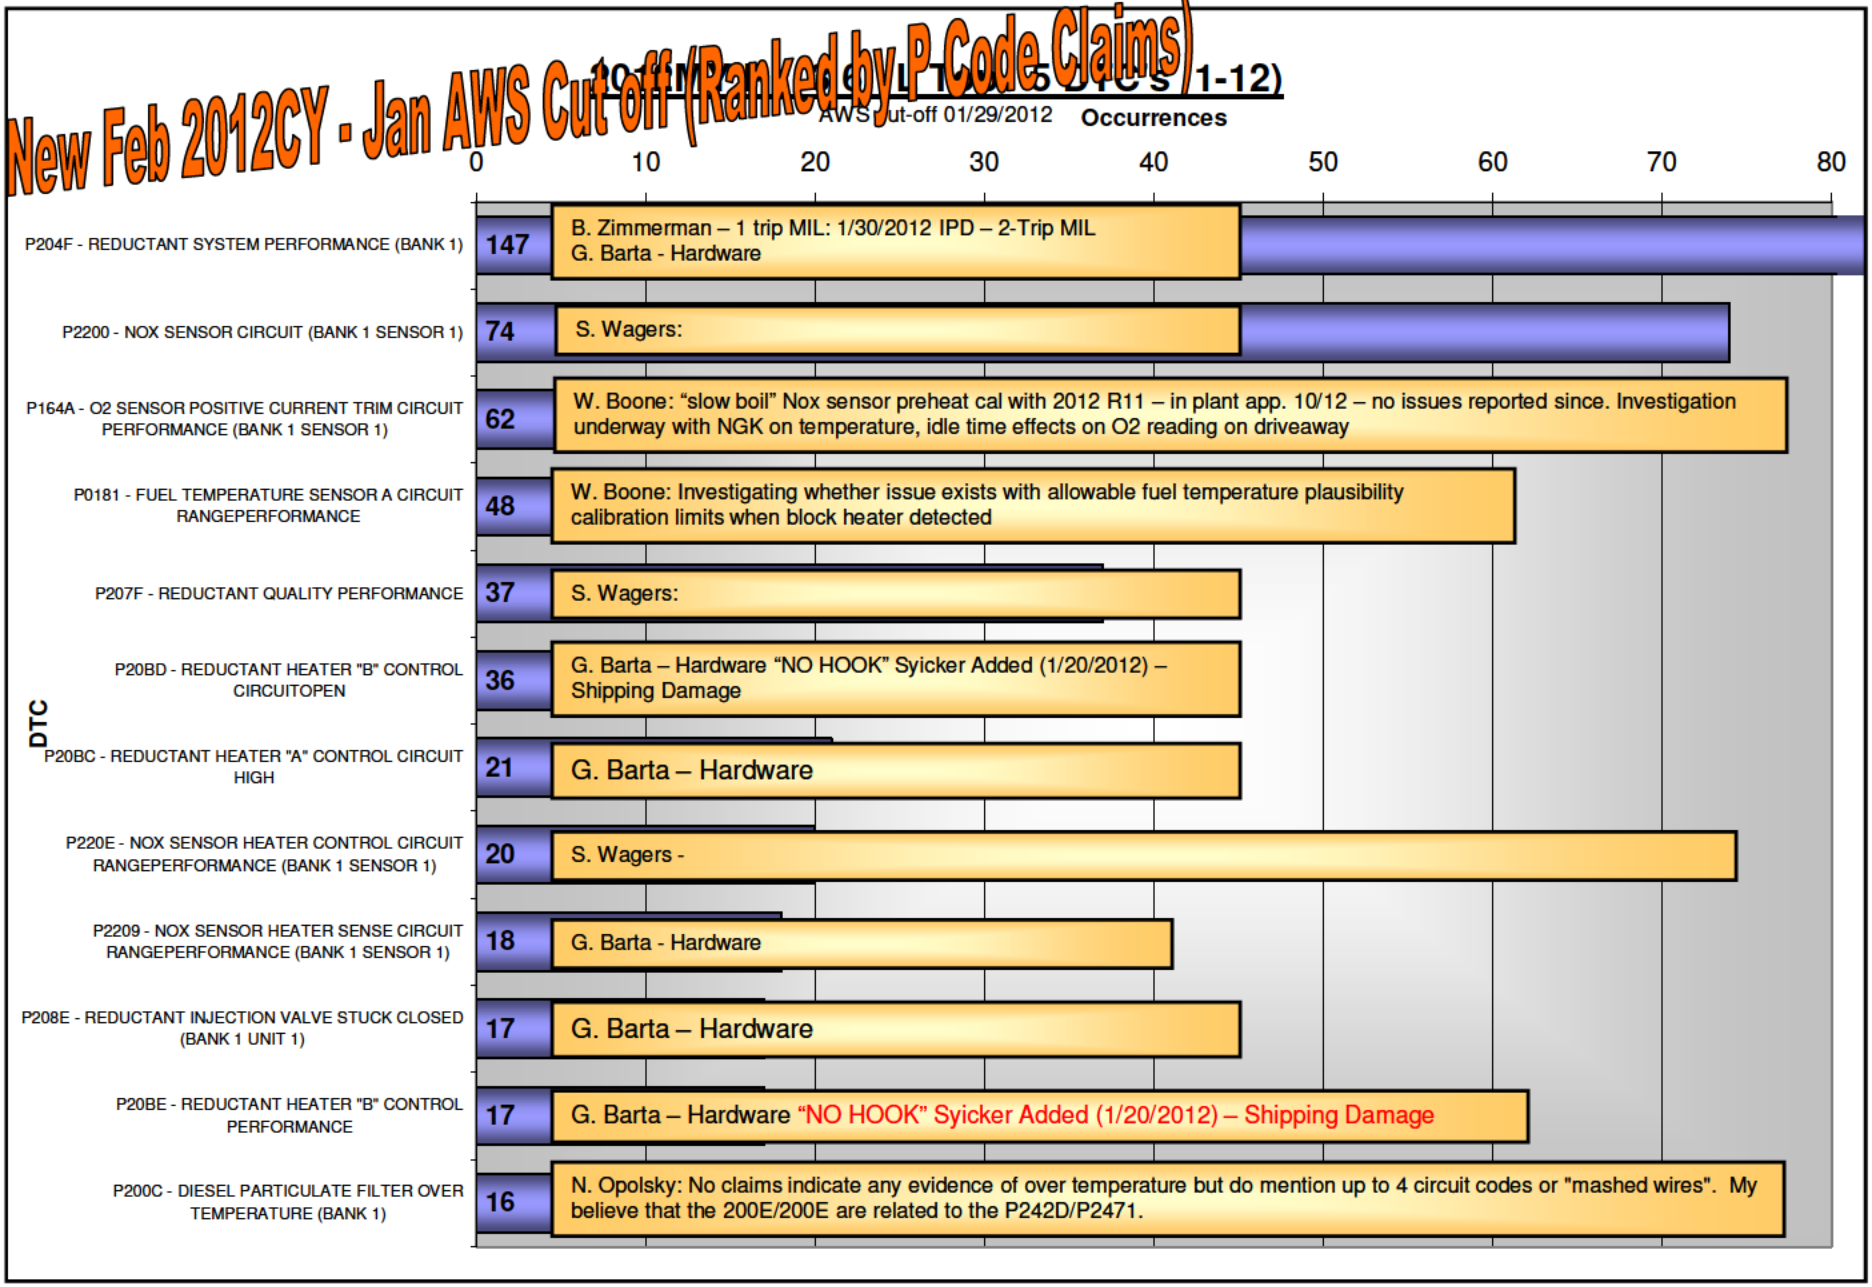

Here is the New Top 25 6.7L Diesel DTC's that we reviewed today. Can you send this out to your team and I will walk them through the claims. Thanks

TERRY J. COWHER

General Info

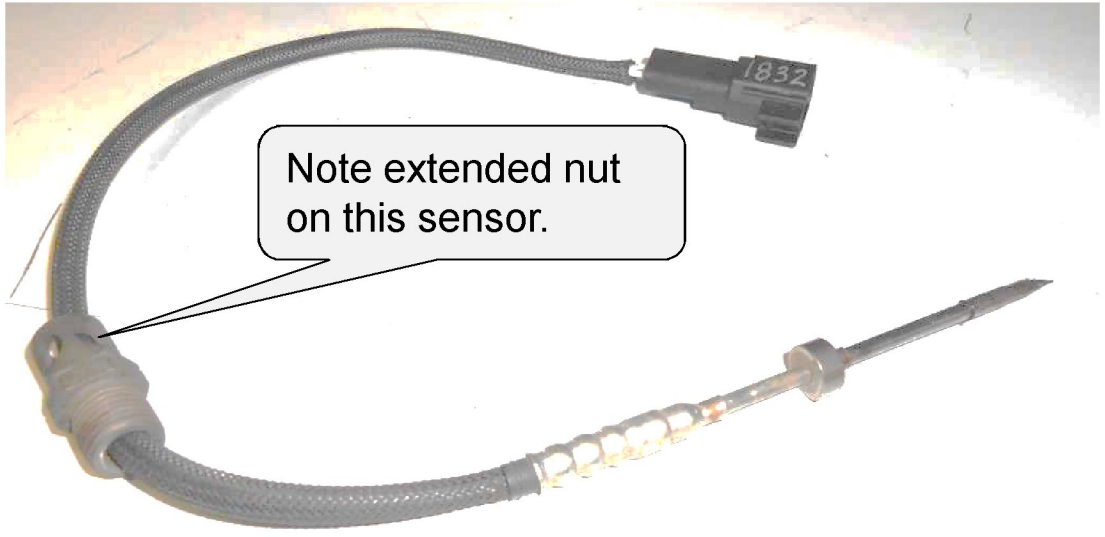

- **Part Name:** Exhaust Gas Temperature Sensor
- **Usage**: 4 places in 2013MY 6.7L Diesel Exhaust
- **Part Numbers:**
  - AC3A-12B591-AC – Standard nut on front 2 sensors
  - AC3A-12B591-BC – Extended nut on rear two sensors
  - AC3Z-5J213B-B – Service part
    - Service part is same as front sensor
    - Extended nut is to prevent damage during assembly
  - ES-AC3A-12B591-BA - Engineering Specification
- **Manufacturer:**

  Stoneridge Control Devices (F903A)

  345 South Mill Street

  Lexington, Ohio 44904

Typical Exhaust Gas Temperature Sensor

Subject: FW: 11 &12 MY SuperDuty EGT Repeat Repairs
Attachments: EGT RR 11-12MY.xlsx

Attached is the repeat repair analysis we ran for 2011/12 MY EGTs. Meant to send this before I left for vacation, but wanted to check "service parts warranty" repairs to complete the analysis. Cynthia has since confirmed there are no EGT repairs covered under the service parts warranty transaction code.

Since the repeat repair rate is less than 0.5% repeat repair rate, we can't justify adding the harness connector repair to the TSB for 2011/12 MY.

We will do similar analysis for 2013/14 MY on repeat repair rate for units that had an EGT sensor replaced on the first repair. Our present TSBs are structured on the assumptions that EGTs were bad and harness connectors were good in 2011/12 MY, and that EGTs were good and harness connectors bad in 2013/14 MY. We will need to confirm this with data.

Subject: 11 &12 MY SuperDuty EGT Repeat Repairs

Mark,

Per our conversation last week, you requested a repeat repair (RR) analysis on EGT sensors (5J213). Specifically looking at activity after the clean date for the sensor of Job #1 2013 MY (October 2012).
Attached is my working file. I started by pulling all EGT claims then filtering on the repeat VINs. From there I tried to define the sensor location so we could see location RR.

Of the 5000+ claims only 22 VINs had repeat repairs on the same location. Of the 22 VINs only nine VINs were RR with the revised parts (both repairs post-Oct '12).
If you have any questions about the file, please let me know.

Cynthia Caesar
Powertrain Quality - Senior Engineer
Bldg #3 32G154 84-56115

Count of VIN	Repair Month

Mark/Bill,

I'm been tracking this as well. Do we have someone who could look into this from a systems standpoint or does it makes more sense to work with FCSD to craft a SSM or change/enhance the PPT?

Scot,

All our EGT claims are TNI for 2013 MY…I see some information in the claims that seems to indicate the dealer had significant difficulty in finding the root cause on some of these. Could you please take a look and maybe pull the freeze frame data and see if you find anything?

Subject: EGT GEN2 WARRANTY CLAIMS REPORT AND R/1000 CHART

Attached is our EGT Gen2 warranty claims report for MY2013, and below is an R/1000 chart for MY 2012 and 2013, beginning with production month 5/2012.

The general trend is downward with some flatness and a slight rise in the early months in service and then seems to be dropping starting in production month 10/2012.

Importance: High

I have 11,600 2011 claims… what's a good sample amount? 500 for each or 1000 for chassis cert and 500 for dyno?

Sue,

This is very helpful….I would like us to run the same report type for the earlier MY.

We also need a perspective of overall R/1000…could we also create a stack chart on R/1000 vs build month at various R/1000?

From: Wagers, Sue (S.K.)
Sent: Wednesday, July 24, 2013 11:43 AM
To: Goodwin, William (W.R.); Straub, Brady; Hutchinson, Rob (R.); jeffrey.philbin@stoneridge.com
Cc: Sonat, Ibrahim (I.)
Subject: RE: EGTS warranty

Sorry for delay – my fault for missing the request in my inbox.

Rob pulled claims and summarized by chassis/dyno cert versus EGT position. This was done for 12&13MY. I should also note the the claim set for 12MY chassis cert was limited to 1000 to give a sample perspective.

If this answers your questions, the analysis can be extended to 11MY and 08MY…

Importance: High

Sue and Brady,

I've been asked to look more carefully at the warranty on the 2011 and 2012 Warranty failure rate on the EGT sensors. Could you please provide an update to the claims that you see:

1. Pull an overall stack chart by Month of production
2. Compare Chassis to Dyno Cert.
3. Review which position the failures are related to dyno cert and chassis cert.

I have been requested also that we do the same for 6.4L from 2008 MY.

Norm, these codes show up in pairs 98% of the time. Attached are 2 TIS runs, one for each DTC and the warranty claim detail file. Based on these codes showing up in pairs I would just look at the P200C claims and TIS chart.

Subject: Harness Quality

Cynthia, pls send a note when you update the next DTC pivot table. We're trying to put together data that shows the impact of recent harness crimp and other wiring changes we have done recently. Thought we would start with your pivot tables, and then pull R/1000 data for changes where we have enough TIS.

This is the start of material we are putting together to review with the electrical team to demonstrate the impact of wiring improvements on PT quality. Intent is to show a cause and effect between bad wiring/crimps/connectors and high mostly MIL warranty.

Your DTC pivot still has all of 2013 MY included?

Sue/Dan/Bill/Scot/Kevin, what is the list of items we need to pull data on? I have:

- Escape GTDI sig return splice (P0106 and P0236)
- F HD EGT circuit and correlation DTCs (P246F, P242B, P2080,P2084, P246E, P242A, etc)

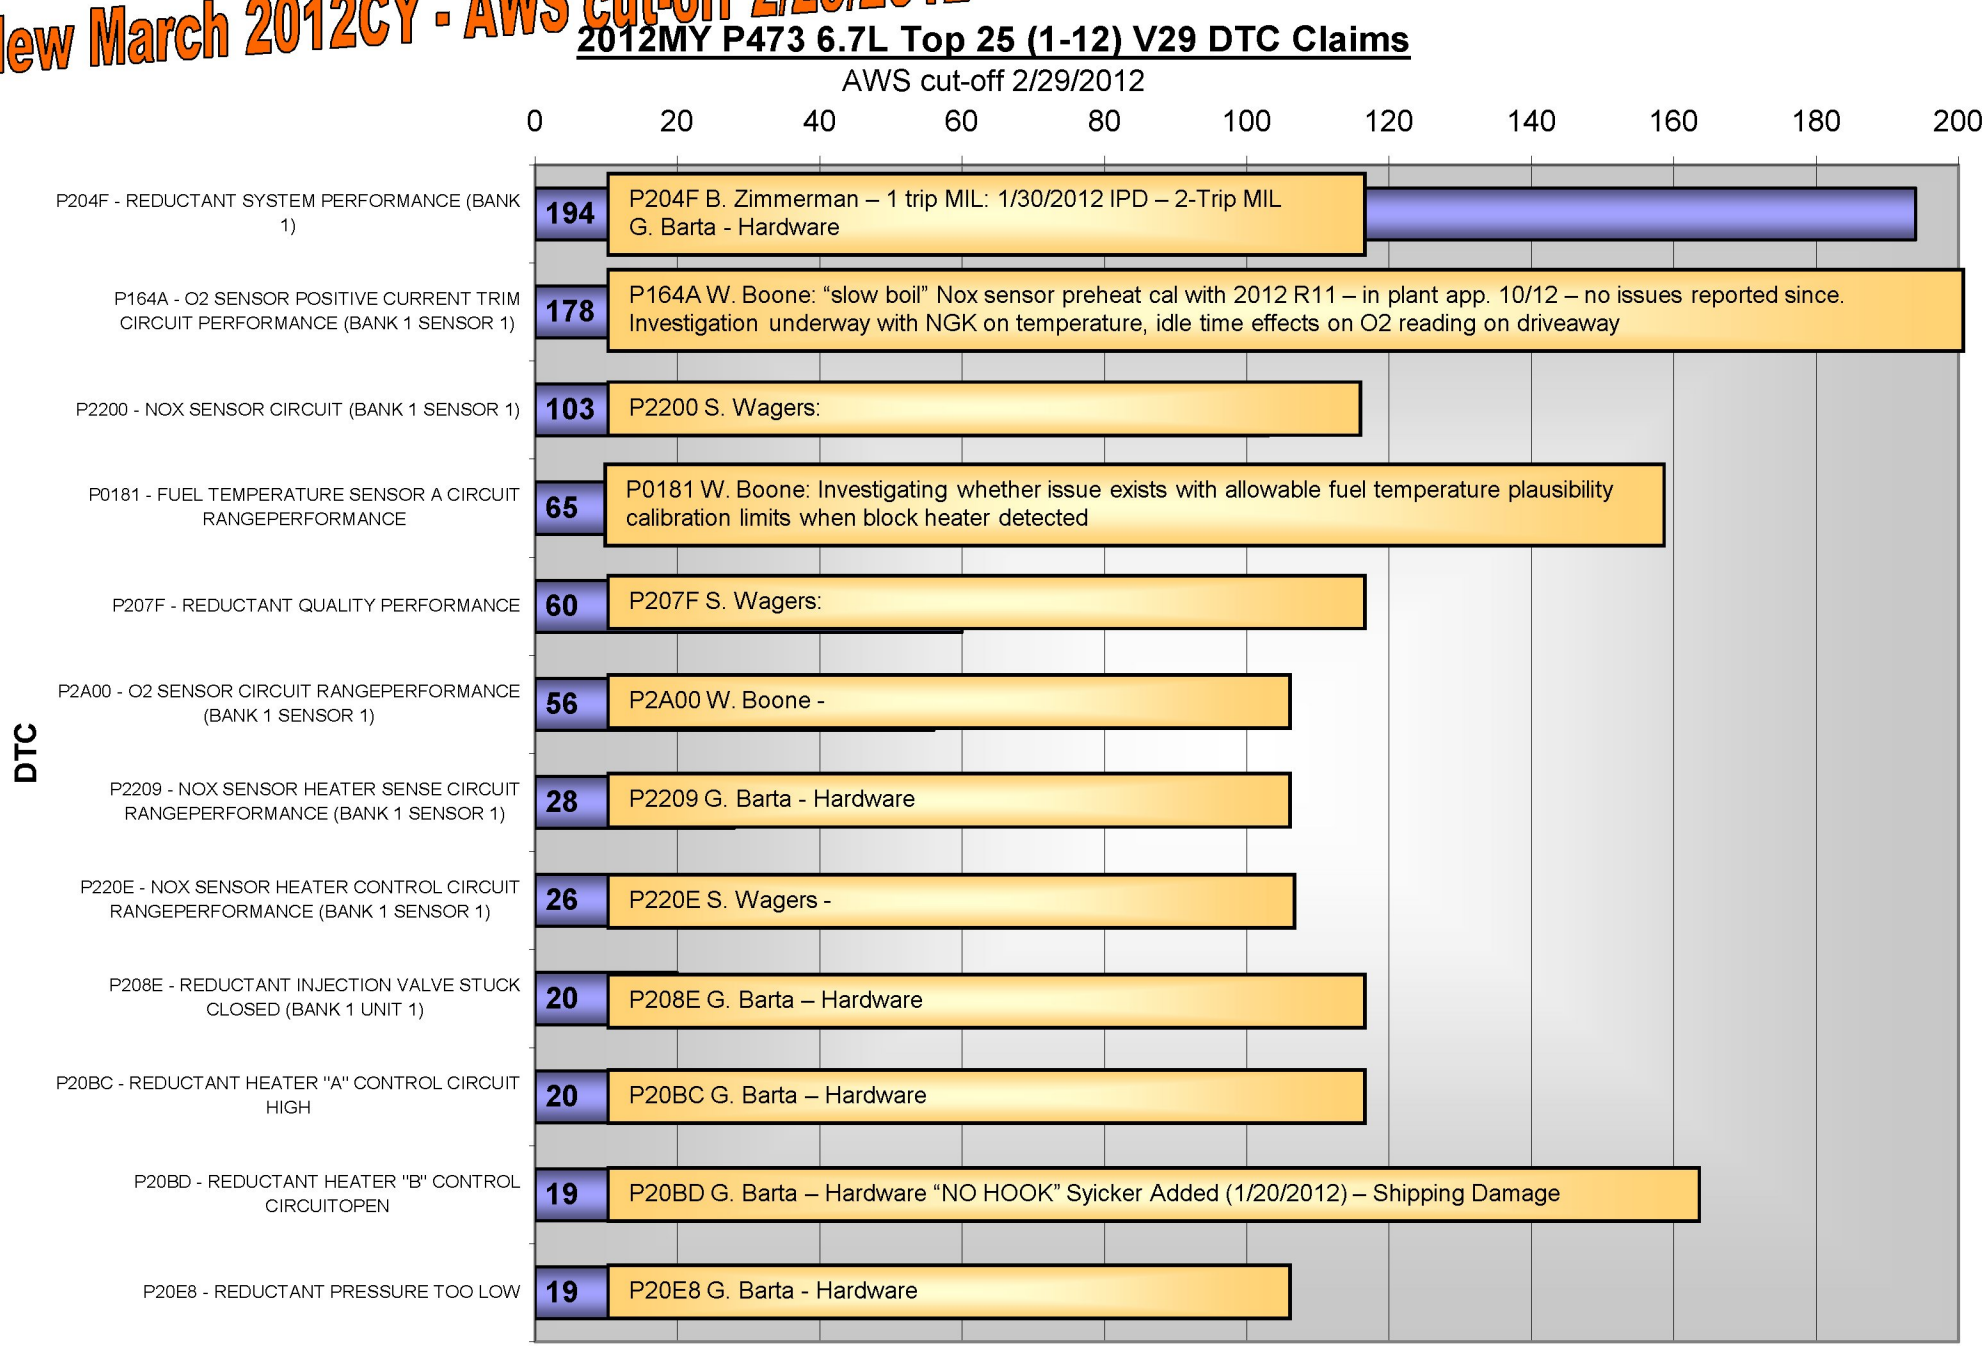

There were a couple of APP issues? Not sure what else.

Data from current complete claims list for the 2011-2013 MY, combined this with the most recent EGT Returns. Dealer commets were queried for all comment that had a P200C or P200E code. Finally, this info was correlated to the total claims. This was done using Excel formulas due to the large number of claims – sampling of the data did check OK.

Note – the pareto of the Stoneridge analysis was simplified, so there may be some error in the groupings – specifically for the weld vs retracted RTD groups. However, the TNI numbers are accurate.

Stoneridge Team,

As I mentioned this morning, our claims for April were 2.5 times the previous 3 months. Please follow-up to see if there is an explaination for this. Thanks.

Subject: EGT Claims after TSB

Paul, please pull EGT claims (5J213) with repair dates after July 10, 2012. This would be on the P473 diesel. Want to understand why the CPR reduction we expected may not be happening.

Thanks.

Subject: RE: EGT DTC Claims

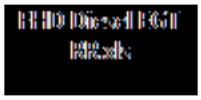

Only the (3) below repeat VINs reference EGT service base part number 5J213. None of the (35) repeat repairs reference DTC P200C, P200E, P2031, P2032 or P2033. Techs are using IDS PIDs to determine correct out of range Sensor location.

1FT7X2BT0BE[redacted]- NOT A REPEAT REPAIR DIFFERENT EGT SENSOR FAULTY TESTS and FOUND 14 READING 1200 DEGREES..REMOVED and REPLACED 14 EGT...CLEARED CODES and ROAD TESTED.ALL PASSED..., PINPOINT TEST, FAILED, PID M

Subject: RE: EGT DTC Claims

Scot, most of these repeat repairs are unrelated to the DTC that caused the first repair. Paul did a very broad repeat repair analysis to make sure we picked up everything.

Could you filter column A for the 2nd repair. You should see about 35 claims with "2" in the column A filed. Check the claims that have anything to do with a repeat for P200E/C and P2021/2/3. These would be the true repeats where an EGT replacement did not fix the concern.

Thanks.

Subject: EGT DTC Claims

Paul, could you do a repeat repair check on the VINs in attached file? We're trying to determine if the EGT replacement (first repair) was the correct repair for these DTCs. Lot of duplicate VINs here since I pulled the claims from the DTC pivot table (one row for each DTC). Thanks.

Cynthia, please pull FF data for P473 (2011/12 MY) diesel DTCs P200E and P200C. I'm sure there is a ton of data in the system for these two DTCs. Best way to narrow this down is to pull the data for repair dates since say March 1. Looking for about 100 to 200 VINs so we can draw conclusions about the EGT 1 through 4 temps in the FF data. Thanks.

Attachments: EGT CLAIMS.XLS; DateCode.jpg

Scot:

Per the discussion below, we do need help getting information and parts from the dealers. In our last call, we discussed getting preliminary information from the dealers, specifically the date code on the sensors. Guy and his team tried to contact the dealers, but they will only share information directly with Ford.

Is it possible for you to help us get the date code details from the list of parts provided by Guy (attached)? Also attached is a photo of the date code location on the sensor connector.

Also – can you verify if the DTC Code for the early warranty failures is available? Bora tried to pull from the early warning warranty data, and the DTC codes were not included. Is there a way to get this so we can also use for an indicator?

Please let us know if you have any questions. We appreciate your help!

Jeffrey Philbin

Subject: RE: EGT PARTS RETREIVAL FROM DEALERS

Scot,

Here is a listing of the claims that we would like to retrieve. Some have a repair date going back to 7/10/2012, so I don't know if they would have already been sent out through the normal process already. In the expedited process would they be sent to WPAC or is it possible to have them sent directly to the Hi-Stat location in Lexington, OH?? Also how could we get future repairs on this expedited process?

Subject: RE: EGT PARTS RETREIVAL FROM DEALERS

Please provide VINs and dealer information. The key to expediting hot request returns is the dealer must submit warranty claim immediately after vehicle repair in order for Ford WPAC system to activate 700 Tag. Please call me if you have any questions. Thanks

Subject: EGT PARTS RETREIVAL FROM DEALERS

Scot,

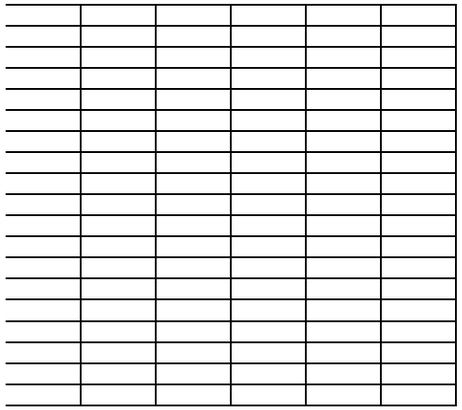

Bill Goodwin suggested I give you a call to determine the quickest way to get back parts from dealers for the EGT parts that were just replaced. I called one dealer and they talked about the Pears Registry and Bill mentioned the Hot Process Request. That dealer I called is within driving distance from us. Others would not be. Please let me know what process we can use. We can call the dealers if needed.

In a few months these should tell us if the harness crimping has been effective.

If we don't see some improvements from the harness crimping late in the year, then we need to move forward with doing something to improve the sensor crimps.

Per Bill's request, Rob created a fireworks chart for 5J213, R/1000 by TIS. There's an overall chart and then a separate one for dyno and chassis cert (1FT/1FD) for last 4 MYs.

I know the point was to see how things are going in 11&12MY, but I don't see much improvement for 13&14MY…especially given that we resolved a major HW issue. Thoughts?

Rob, thanks!

Is it possible to put the baseline r/1000 at projected ful values? It would make the bottom of the chart more clear.

Here is the latest based on the extensive FF data reviews and reviews of the improved function by MY. The conclusion is the that planned FSA would be projected to be very effective.

		Ambulance FSA FUL	15																	
		Emissions FSA impact (FUL projection)	<1		<1				<1		<1				0.3		0.3			
		Final Status (FUL Projection)	<1			45*	<1		<1			45*	<1		<1			45*	<1	

Final is FUL warranty projection where baseline is current status

FSA Final State Data: 189 multiple failures over 357,000 vehicles (2011 and 2012 MY actual vehicle freeze frame data)

0.529 R/.1000 at current TIS state
80% failures are dual out of range (Torque reduction in the FSA, not stop safely)
0.32 R/1000 FUL projection (3x multiplier) for Stop Safely now function

Non-FSA Final State Data: Detailed Freeze frame data from 2014MY indicates 40% of "Stop Safely Now" is with vehicle speed less than 1 MPH and Run time less than 5 seconds

* **Actual FUL estimate = 27 R/1000 for customers in condition where vehicle has "Stop Safely Now" while driving**

Subject: RE: EGT Tech Verbatim

Firstly, I hope we (KTP) have not been routing these incorrectly since 2013MY—since that would be 3 model years of trucks.

Certainly this "touching condition" would show up on the analysis of a returned part. I guessing you would see a burn thorough of the sheathing and the wire itself.

P0208 is a big slice of the DTC pie for EGT. (Data is ECB by DTC for EGT for Calendar year 2014—would include some 2014MY & 2015MY claims)

I assume you are all talking about P2080, as P0208 is an injector code.

This is the first EGT that I have seen for a condition that the wire was hanging on the DPF. Is this even possible with the connector attached to the frame?

Subject: RE: EGT spend trends

Looks like the "peak to peak" values not much different between east and west. Absolute spend value much less in the west. Any way to get a normalized r/1000 at say 6 or 9 MIS comparing east and west?

<< File: Texas Spend breakdown.xlsx >>

I cut this using an area code map of Texas, splitting east and west… Both appear pretty wavy… only the East end seems more flat for the 14MY (more months with higher spend, as compared to West

Looking just at Texas is a great idea.

If you believe water quenching is the source for thermal shock, you could compare east and west Texas. Much wetter in east Texas (although when is does rain in more arid West Texas, may get equal or more "pudding" due to slower run off).

We did this before looking at CAC misfire – much higher rate in more humid/wet east Texas.

Subject: EGT spend trends

I made a note a while ago (and then forgot) that I wanted to review the spend trend/ Oct peak of EGTs more closely. It's even more dramatic in 14CY than previous years but always there.

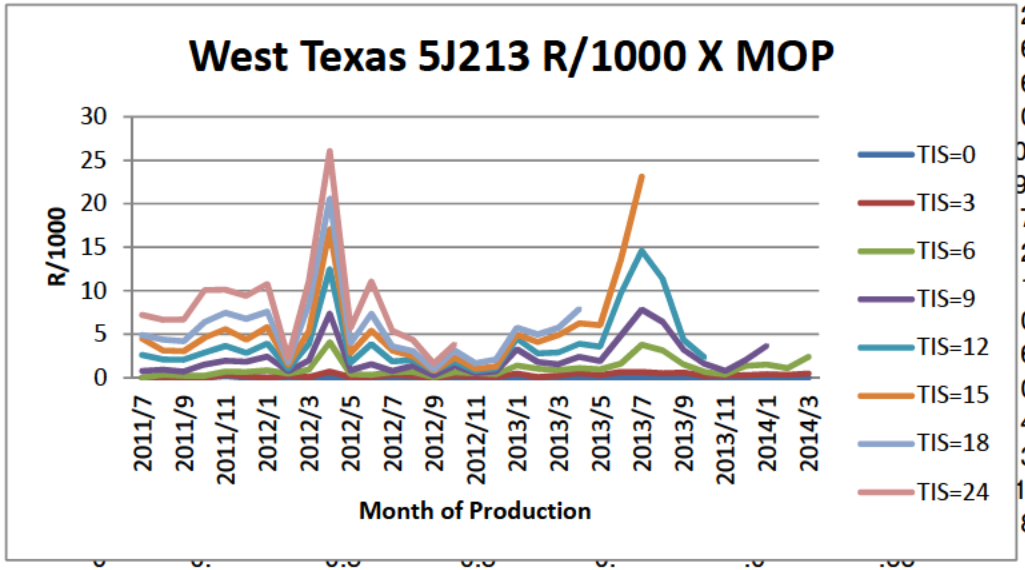

We've kicked around the idea that it's related to ambient temp but I asked Rob to pull spend by load month for only TX claims where the ambient temps are significantly more stable at least in winter. The trend is still present. Thoughts?

<< File: 5J213 Spend by Load Month in TX.xlsx >>
Perhaps it's related to hot temps and not cold. Would CAN claims be a similar comparator to see if less hot in summer equates to fewer EGT claims?

Subject: RE: P473 EGT Warranty for 2011-2014MY

Along with this data we requested, we are also going to require a report on P200C and P200E since the 6.4L was introduced on superduty. (these are the codes that actually detect over temperature events) This can be a claims count sorted by TIS and MY.

John, so you want claims count for 5J213 for 11-14MY sorted by TIS and MY? Or do you want R/1000 vs TIS for each MY – a fireworks chart?

The current issue we're investigating is poor crimping in the EGT connector, but it's not a new issue. We think it contributes to some of the field issues we're still seeing.

Cynthia, can you help pull the data?

THX!!

Sue Wagers

Subject: P473 EGT Warranty for 2011-2014MY

Sue,

REDACTED FOR PRIVILEGE

This update will cover circuit faults not putting the diesel vehicle into "stop safely now".

The team is ok with this timing, if the warranty data supports that we are not having a further rash of issues in the field.

Can you get the data on repairs for EGTs vs. Time and MY?
