JETSTREAM

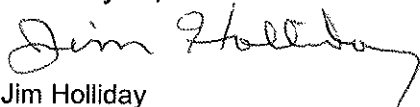

In response to the information request for EQ 15-003,
Elgin Sweeper identified the Cummins, Inc. engines by serial number and the
warranty registered owners.

1. The Bluebird recall states their issues were with rear engine installations, Elgin Sweeper installations are all front chassis installs.
2. All of our installations were in standard Freightliner and Sterling glider chassis (rolling chassis less engine, transmission, and rear axles).
3. The engines were all installed as received with no Elgin modifications to the cooling systems.
4. Our build dates are 8/2013 through 10/2010 with no reports of coolant related issues or hoses failures.

Upon review of our operations, Elgin Sweeper does not believe there to be a safety issue in any of our vehicles manufactured with this Cummins, Inc. engine.

Therefore, Elgin Sweeper will not be conducting a recall on these units for this Bluebird related issue.

Thank you,

Jim Holliday
