Summary description - The fleet customer contacted MFTA to report an accident involving one of their customer's 2012 Enterprise Leasing Canterers. The driver who leased the Canter (which does not require a commercial vehicle license) stated that he was travelling on 59th St. in Chicago and turned onto Ellis. He approached a red traffic light while the other party was travelling through the green light. The driver applied the brakes, but stated he was unable to stop the vehicle and entered the intersection. The other vehicle then collided with Canter's left front door, injuring both the Canter driver and other driver. The driver of the Canter claimed that the truck's brakes failed, causing the accident. MFTA's Product Support Manager in the area reported that the truck never showed up at any of his dealerships with any reported brake issues and MFTA Warranty has received no warranty claims for brake-related repairs. Further, this vehicle was inspected by an independent expert after this incident in response to a request from an insurance company, with the insurance adjuster present. The independent expert found the brakes in working order, with no abnormal pedal travel. The insurance company did not file a claim against MFTA, and MFTA did not enter into any kind of settlement or release.

4. Produce copies of all documents related to each item within the scope of Request No. 2. Organize the documents separately by category (i.e., consumer complaints, field reports, etc.) and describe the method used for organizing the documents. Describe in detail the search methods and search criteria used by Mitsubishi to identify the items in response to Request No. 2.

The method used for organizing the documents follows TREAD Act reporting requirements. Each document containing proper criteria for investigating allegations of brake failures causing extended stopping distances (brake shim rust) was then physically examined.

Customer complaints were analyzed using the following search criteria: Models – FEC52, FEC72, FEC92; Model years – 2012, 2013; TREAD code - 03-Service Brake System-Hydraulic

Field reports were analyzed using the following search criteria: Models – FEC52, FEC72, FEC92; Model years – 2013, 2013; Mitsubishi Fuso Group Code – 35-00 SERVICE BRAKE

Copies of the documents are attached below.

### COMPLAINT:

CUSTOMER COMPLAINS OF SPONGY BRAKE PEDAL  
PRIOR RELATED PQR'S - FV12T085A AND FV13T022A  
NO PRIOR RELATED HISTORY

### CAUSE:

VERIFIED CUSTOMERS COMPLAINT OF SPONGY BRAKES. TEST DROVE THE VEHICLE AND CONFIRMED THE BRAKE PEDAL HAD TO BE PUMPED BEFORE THE BRAKES WOULD TAKE ACTION. FOUND BRAKE PADS IN GOOD SHAPE BUT STEEL SHIM RUSTED ON THE BACK OF THE PADS. CAUSE OF THE ISSUE DETERMINED TO BE RUSTY SHIMS.

### CORRECTION AND COMMENTS:

REPLACED ALL BRAKE PADS WITH UPDATED SHIMS.  
PART RETURNED TO MFTA ON 10/2/14.  
\*\*MFTA ACKNOWLEDGES THAT MFTBC IMPLEMENTED A COUNTER MEASURE FOR PART NUMBER MK585740 BUT WE WOULD LIKE TO SHOW THE MAGNITUDE OF FAILURES.

### --- MMC COMMENTS -----

DATE CLOSED: 10/22/14  
ACCORDING TO OUR INVESTIGATION FOR THIS ISSUE, MFTBC JUDGED THAT BRAKE FORCE IS SECURED AND WITHIN ITS SPECIFICATION WHEN THE ORIGINAL STEEL BRAKE SHIM RUSTED. IN ADDITION, WE JUDGED THAT THE CUSTOMER CAN DETECT THIS CONDITION WHEN CUSTOMER DRIVES OR AND PRE-OPERATIONAL CHECK WHICH IS DESCRIBED ON OWNER'S HANDBOOK. WE ALREADY INTRODUCED STAINLESS STEEL SHIM ON MARCH 2013 INTO MARKET AND YOU CAN OBTAIN IT AS A SPARE PARTS CHANNEL. SINCE THE BRAKE PAD KIT IS CONSUMABLE PARTS, WE BELIEVE THAT VEHICLES WILL BE REPLACED TO THE SUS SHIM DURING NORMAL MAINTENANCE CYCLE. FROM ABOVE SITUATIO, MFTBC WOULD LIKE TO CLOSE THIS PQR. IF YOU FACE A SIMILIAR PROBLEM, PLEASE ISSUE A NEW PQR.

**SUBJECT:** 2013 FEC72. RUSTED SHIMS. REPLACED ALL BRAKE PADS WITH UPDATED SHIMS. **REPORTED BY:** MATT BURGESS (A)

Item 4.

Source – MFTA Customer Service Log, MFTA Product Quality Report System,

Last date information was gathered – June 8, 2015

5. State, by model and model year, a total count for all the following categories of claims, collectively, that have been paid by Mitsubishi to date that relate to, or may relate to, the alleged defect in subject vehicles: warranty claims, extended warranty claims, claims for good will services that were provided; field, zone, or similar adjustments and reimbursements; and warranty claims or repairs made in accordance with a procedure specified in a technical service bulletin or customer satisfaction campaign.

Separately, for each such claim, state the following information:

- a. Mitsubishi's claim number
- b. Vehicle owner or fleet name (and fleet contact person), street address, email address and telephone number;
- c. VIN;
- d. Repair date;
- e. Vehicle mileage at time of repair;
- f. Repairing dealer's or facility's name, telephone number, city and state or ZIP code;
- g. Labor operation number;
- h. Problem code(s);
- i. Diagnostic trouble code(s);
- j. Replacement part number(s) and description(s);
- k. Concern stated by customer;
- l. Cause as stated on the repair order;
- m. Correction as stated on the repair order; and
- n. Additional comments, if any, by the dealer/technician relating to claim and/or repair.

A spreadsheet of the information is attached.

Item 5.

Source – MFTA Warranty Database

Last date information was gathered – May 11, 2015

6. Describe in detail the search methods and search criteria used by Mitsubishi to identify the claims in response to Request No. 5, including the labor operations, problem codes, diagnostic trouble codes, part numbers, part numbers and any other pertinent parameters used.

Provide a list of all labor operations, labor operation descriptions, problem codes, and problem code descriptions, diagnostic trouble codes, and diagnostic trouble code descriptions applicable to the alleged defect in the subject vehicles. State whether the diagnostic trouble codes are automatically reported to the warranty database electronically or manually entered into the warranty database by a claims administrator.

State, by make and model year, the terms of the new vehicle warranty coverage offered by Mitsubishi on subject vehicles (i.e., the number of months and mileage for which coverage is provided and the vehicle systems that are covered). Describe any extended warranty coverage option(s) that Mitsubishi offered for the subject vehicles and state by option, model and model year, the number of vehicles that are covered under each such extended warranty.

The Warranty Claim database was queried to extract all 2012 and 2013 model year FEC52, FEC72 and FEC92 Warranty Claims in the Service Brake (Group 35) category. These Service Brake Claims were then queried to narrow the scope to Front Disk Brake General (Group 3522) and Rear Disk Brake General (Group 3526). Each of these Disk Brake Claims was then examined to determine if the failure was caused by rusted/corroded brake shims.

In order to determine if there were Claims outside of the Disk Brake categories in the Service Brake Group, the Claims generated from the initial Service Brake query were data mined for the following textual terms:

shim  
rust  
rot/rotten/rotted  
sponge/spongy  
corrosion/corroded

Using this additional data mining technique, MFTA was able to determine that there were a total of twenty six (26) Warranty Claims for failures related to brake shim rust/corrosion.

A list of all labor operations and descriptions; a list of problem codes and descriptions; the 2012, 2013 and 2014 Warranty Policies; and an Options Service Plan Policy (extended warranty) are attached.

There are no diagnostic trouble codes associated with this failure. If there were associated trouble codes, they would have been manually entered into the warranty database by a claims administrator.

The basic new vehicle warranty coverage 36 months, unlimited miles. The powertrain coverage is 60 months, 175,000 miles; the anti-corrosion perforation coverage is 48 months, unlimited miles; the emissions coverage is 60 months 50,000 miles (100,000 miles in CARB states) and the frame coverage is 60 months, unlimited miles.

There are several Optional Service Plans (extended warranty) offerings ranging from 60 months, 200,000 miles through 96 months 250,000 miles. There are currently 7 subject vehicles that have been assigned one of these offerings. The plans apply only to the powertrain (engine, transmission and rear differential),

not the service brake system. There are two (2) vehicles covered by a 60 month, 200,000 mile plan; one (1) by a 60 month, 225,000 mile plan; three (3) by a 72 month, 225,000 mile plan, and one (1) covered by a 96 month, 250,000 mile plan.

Plan	Model	Model Year	Quantity
60 month, 200,000 mile	FEC72S	2012	1
60 month, 200,000 mile	FEC92S	2012	1
60 month, 225,000 mile	FEC92S	2012	1
72 month, 225,000 mile	FEC72S	2012	3
96 month, 250,000 mile	FEC92S	2013	1

A list of all labor operations and problem codes is attached below, along with copies of the 2012, 2013 and 2014 Warranty Policies and the Optional Service Plan booklet.

**WHAT IS NOT COVERED**

- 1) Corrosion due to accident, damage, abuse, abnormal use, alteration or failure to properly maintain the Truck.
- 2) Surface corrosion, such as that caused by industrial fallout, sand, salt, hail and stones.

THE "OTHER TERMS" STATED IN THE MFTA NEW VEHICLE LIMITED WARRANTY (Part 1.) ALSO APPLY TO THIS ANTI-CORROSION PERFORATION LIMITED WARRANTY.

**OBTAINING WARRANTY SERVICE**

To obtain warranty service, your Truck must be returned to your nearest Authorized Dealer where such service will be performed in accordance with the terms of this anti-corrosion Perforation Limited Warranty.

**THINGS YOU SHOULD KNOW ABOUT THIS ANTI-CORROSION PERFORATION LIMITED WARRANTY.**

It is your responsibility under the terms of this Anti-corrosion Perforation Limited Warranty to maintain your Truck as specified below and in the Owner's Manual.

This Anti-corrosion Perforation Limited Warranty covers perforation due to corrosion only. Perforation means a rust-through condition, producing an actual hole in a sheet metal panel.

**MAINTAINING YOUR TRUCK AGAINST CORROSION**

## 1) Washing:

The best way to preserve your Truck's finish and aid in avoiding rust is to keep the Truck clean by washing it frequently. Wash the Truck only with lukewarm or cold water. Do not wash the Truck in the direct rays of the sun, or use strong soap or chemical detergents. Any cleaning agents used should be washed off promptly and not allowed to dry on the finish.

## 2) Foreign Material Deposits:

Calcium chloride and other salts, ice melting agents, road oil and tar, tree sap, bird droppings, chemicals from industrial chimneys and other foreign matter may damage the Truck's finish if left on painted surfaces. Prompt washing may not completely remove all these deposits. Additional cleaners may be needed. When using chemical cleaners developed for this purpose, be sure they are safe for use on painted surfaces.

## 3) Underbody Maintenance:

Corrosive materials used for ice removal and dust control can collect on underbody surfaces. If these materials are not removed, accelerated rusting can occur on the underbody parts such as fuel lines, frame, floor panel and exhaust system. At least twice a year, and more frequently in climates where road salt is commonly used, thoroughly flush these materials from the underbody with plain water. Take care to clean any areas where mud and other debris can collect.

## 4) Finish Damage:

Any stone chips, cracks or deep scratches in the finish should be repaired promptly. Bare metal will corrode quickly and can develop into a major repair expense. Minor chips and scratches can be repaired with touch-up materials available from an Authorized Dealer.

\* As defined in the MFTA New Vehicle Limited Warranty (Part 1.).

**OWNER'S WARRANTY RESPONSIBILITIES**

- As the truck owner, you are responsible for the performance of the required maintenance listed in your owner's manual. MFTA recommends that you retain all receipts covering maintenance on your truck, but MFTA cannot deny warranty solely for the lack of receipts or for your failure to ensure the performance of all scheduled maintenance.
- You are responsible for presenting your truck to a MFTA dealer as soon as a problem exists. The warranty repairs should be completed in a reasonable amount of time, not to exceed 30 days.
- As the truck owner, you should also be aware that MFTA may deny you warranty coverage if your truck or a part has failed due to abuse, neglect, improper maintenance or unapproved modifications.

If you have any questions regarding your warranty rights and responsibilities, you should contact Service Operations, Mitsubishi Fuso Truck of America, Inc. at 2015 Center Square Road, Logan Township, NJ 08085 (1-877-711-0707) or the California Air Resources Board at 9528 Telstar Avenue, El Monte CA 91731.

Mitsubishi Fuso Truck of America Inc. (hereinafter referred to as "MFTA") warrants to the ultimate purchaser and each subsequent purchaser of Trucks that the engine, as installed by MITSUBISHI FUSO TRUCK AND BUS CORPORATION, (1) was designed, built, and equipped so as to conform, at the time of sale to the ultimate purchaser, with the Federal Environmental Protection Agency regulations and California exhaust emissions regulations applicable at the time of manufacture, and (2) is free from defects in material and workmanship at the time of sale which would cause the engine to fail to conform with such regulations for a period of use of 5 years or 50,000 miles (80,000 km) with respect to the trucks registered in the U.S.A. except California and 5 years or 100,000 miles (3 years or 50,000 miles GVW  $\leq$  14,000) with respect to the trucks registered in California and other states that have adopted CARB emissions regulations and warranty from the Warranty Start Date\*, whichever occurs first.

Any part of the engine which is covered under this Emissions Control System Defect Warranty and which proves to be defective in material or workmanship will be repaired or replaced including diagnosis by any Authorized Dealer, using Genuine Mitsubishi Fuso Parts.\*\*

This Emissions Control System Defect Warranty shall apply only to Genuine Mitsubishi Fuso Parts.

With respect to the trucks registered in California and other states that have adopted CARB regulations and warranty, the emissions warranty will have a period consistent with the state requirements.

\* Warranty Start Date

This warranty starts on the date of original retail delivery or original date placed in service as a demonstrator or company vehicle, whichever occurs first.

\*\* Genuine Mitsubishi Fuso Parts

Genuine new parts, components and accessories approved by MFTA for use on Trucks and distributed by MFTA.

**EMERGENCY SITUATION**

In an emergency, where an authorized dealer is not reasonably available, repairs may be performed at any available service establishment or by the owner, using any replacement parts. In order for MFTA to reimburse the owner for expenses (including diagnosis), not to exceed MFTA's suggested retail price for all warranted parts replaced and labor charges based on MFTA's recommended time allowance for the warranty repair and the geographically appropriate hourly labor rate, the owner may reasonably be required to keep replaced parts and paid invoices. A part not being available within 30 days or a repair not being complete within 30 days constitutes an emergency.

**REPLACEMENT PARTS**

Any replacement part may be used for maintenance or repairs. The owner should ensure that such parts are equivalent in design and durability to Genuine Mitsubishi Fuso Parts. Use of non-Genuine Mitsubishi Fuso Parts does not invalidate the warranty. However, MFTA is not liable for parts which are not Genuine Mitsubishi Fuso Parts.

**OWNER'S RESPONSIBILITIES**

The owner is responsible for the performance of all required maintenance. A warranty claim will not be denied because the scheduled maintenance was not performed. However, if the lack of required maintenance was the reason for the repair then the claim will be denied.

**MAINTENANCE PARTS**

Any warranted part scheduled for replacement as required maintenance in the written instructions is warranted up to the first scheduled replacement point.

**WARRANTY PARTS LIST**

A list of warranted parts is provided under the heading of "WHAT IS COVERED" of this Emission System Warranty Statement.

**EXCLUSIONS FROM WARRANTY COVERAGE**

If MFTA demonstrates that abuse, neglect or improper maintenance was the direct cause of the failure then the repair is not covered by the warranty.

**WHAT IS COVERED**

**OBTAINING WARRANTY SERVICE**

To obtain warranty service, your Truck must be returned to your nearest Authorized Dealer where such service will be performed in accordance with the terms of this anti-corrosion Perforation Limited Warranty.

**THINGS YOU SHOULD KNOW ABOUT THIS ANTI-CORROSION PERFORATION LIMITED WARRANTY.**

It is your responsibility under the terms of this Anti-corrosion Perforation Limited Warranty to maintain your Truck as specified below and in the Owner's Manual.

This Anti-corrosion Perforation Limited Warranty covers perforation due to corrosion only. Perforation means a rust-through condition, producing an actual hole in a sheet metal panel.

**MAINTAINING YOUR TRUCK AGAINST CORROSION**

## 1) Washing:

The best way to preserve your Truck's finish and aid in avoiding rust is to keep the Truck clean by washing it frequently. Wash the Truck only with lukewarm or cold water. Do not wash the Truck in the direct rays of the sun, or use strong soap or chemical detergents. Any cleaning agents used should be washed off promptly and not allowed to dry on the finish.

## 2) Foreign Material Deposits:

Calcium chloride and other salts, ice melting agents, road oil and tar, tree sap, bird droppings, chemicals from industrial chimneys and other foreign matter may damage the Truck's finish if left on painted surfaces. Prompt washing may not completely remove all these deposits. Additional cleaners may be needed. When using chemical cleaners developed for this purpose, be sure they are safe for use on painted surfaces.

## 3) Underbody Maintenance:

Corrosive materials used for ice removal and dust control can collect on underbody surfaces. If these materials are not removed, accelerated rusting can occur on the underbody parts such as fuel lines, frame, floor panel and exhaust system. At least twice a year, and more frequently in climates where road salt is commonly used, thoroughly flush these materials from the underbody with plain water. Take care to clean any areas where mud and other debris can collect.

## 4) Finish Damage:

Any stone chips, cracks or deep scratches in the finish should be repaired promptly. Bare metal will corrode quickly and can develop into a major repair expense. Minor chips and scratches can be repaired with touch-up materials available from an Authorized Dealer.

\* As defined in the MFTA New Vehicle Limited Warranty (Part 1.).

- You are responsible for presenting your truck to a MFTA dealer as soon as a problem exists. The warranty repairs should be completed in a reasonable amount of time, not to exceed 30 days.
- As the truck owner, you should also be aware that MFTA may deny you warranty coverage if your truck or a part has failed due to abuse, neglect, improper maintenance or unapproved modifications.

Mitsubishi Fuso Truck of America Inc. (hereinafter referred to as "MFTA") warrants to the ultimate purchaser and each subsequent purchaser of Trucks that the engine, as installed by MITSUBISHI FUSO TRUCK AND BUS CORPORATION, (1) was designed, built, and equipped so as to conform, at the time of sale to the ultimate purchaser, with the Federal Environmental Protection Agency regulations and California exhaust emissions regulations applicable at the time of manufacture, and (2) is free from defects in material and workmanship at the time of sale which would cause the engine to fail to conform with such regulations for a period of use of 5 years or 50,000 miles (80,000 km) with respect to the trucks registered in the U.S.A. except California and 5 years or 100,000 miles (3 years or 50,000 miles GVW  $\leq$  14,000) with respect to the trucks registered in California and other states that have adopted CARB emissions regulations and warranty from the Warranty Start Date\*, whichever occurs first.

\*\* Genuine Mitsubishi Fuso Parts

#### **EMERGENCY SITUATION**

In an emergency, where an authorized dealer is not reasonably available, repairs may be performed at any available service establishment or by the owner, using any replacement parts. In order for MFTA to reimburse the owner for expenses (including diagnosis), not to exceed MFTA's suggested retail price for all warranted parts replaced and labor charges based on MFTA's recommended time allowance for the warranty repair and the geographically appropriate hourly labor rate, the owner may reasonably be required to keep replaced parts and paid invoices.

A part not being available within 30 days or a repair not being complete within 30 days constitutes an emergency.

#### **REPLACEMENT PARTS**

Any replacement part may be used for maintenance or repairs. The owner should ensure that such parts are equivalent in design and durability to Genuine Mitsubishi Fuso Parts. Use of non-Genuine Mitsubishi Fuso Parts does not invalidate the warranty. However, MFTA is not liable for parts which are not Genuine Mitsubishi Fuso Parts.

#### **OWNER'S RESPONSIBILITIES**

The owner is responsible for the performance of all required maintenance. A warranty claim will not be denied because the scheduled maintenance was not performed. However, if the lack of required maintenance was the reason for the repair then the claim will be denied.

#### **MAINTENANCE PARTS**

Any warranted part scheduled for replacement as required maintenance in the written instructions is warranted up to the first scheduled replacement point.

#### **WARRANTY PARTS LIST**

A list of warranted parts is provided under the heading of "WHAT IS COVERED" of this Emission System Warranty Statement.

**OBTAINING WARRANTY SERVICE**

To obtain warranty service, your Truck must be returned to your nearest Authorized Dealer where such service will be performed in accordance with the terms of this anti-corrosion Perforation Limited Warranty.

**THINGS YOU SHOULD KNOW ABOUT THIS ANTI-CORROSION PERFORATION LIMITED WARRANTY.**

It is your responsibility under the terms of this Anti-corrosion Perforation Limited Warranty to maintain your Truck as specified below and in the Owner's Manual.

This Anti-corrosion Perforation Limited Warranty covers perforation due to corrosion only. Perforation means a rust-through condition, producing an actual hole in a sheet metal panel.

**MAINTAINING YOUR TRUCK AGAINST CORROSION**

## 1) Washing:

The best way to preserve your Truck's finish and aid in avoiding rust is to keep the Truck clean by washing it frequently. Wash the Truck only with lukewarm or cold water. Do not wash the Truck in the direct rays of the sun, or use strong soap or chemical detergents. Any cleaning agents used should be washed off promptly and not allowed to dry on the finish.

## 2) Foreign Material Deposits:

Calcium chloride and other salts, ice melting agents, road oil and tar, tree sap, bird droppings, chemicals from industrial chimneys and other foreign matter may damage the Truck's finish if left on painted surfaces. Prompt washing may not completely remove all these deposits. Additional cleaners may be needed. When using chemical cleaners developed for this purpose, be sure they are safe for use on painted surfaces.

## 3) Underbody Maintenance:

Corrosive materials used for ice removal and dust control can collect on underbody surfaces. If these materials are not removed, accelerated rusting can occur on the underbody parts such as fuel lines, frame, floor panel and exhaust system. At least twice a year, and more frequently in climates where road salt is commonly used, thoroughly flush these materials from the underbody with plain water. Take care to clean any areas where mud and other debris can collect.

## 4) Finish Damage:

Any stone chips, cracks or deep scratches in the finish should be repaired promptly. Bare metal will corrode quickly and can develop into a major repair expense. Minor chips and scratches can be repaired with touch-up materials available from an Authorized Dealer.

\* As defined in the MFTA New Vehicle Limited Warranty (Part 1.).

Mitsubishi Fuso Truck of America Inc. (hereinafter referred to as "MFTA") warrants to the ultimate purchaser and each subsequent purchaser of Trucks that the engine, as installed by MITSUBISHI FUSO TRUCK AND BUS CORPORATION, (1) was designed, built, and equipped so as to conform, at the time of sale to the ultimate purchaser, with the Federal Environmental Protection Agency regulations and California exhaust emissions regulations applicable at the time of manufacture, and (2) is free from defects in material and workmanship at the time of sale which would cause the engine to fail to conform with such regulations for a period of use of 5 years or 50,000 miles (80,000 km) with respect to the trucks registered in the U.S.A. except California and 5 years or 100,000 miles (3 years or 50,000 miles GVW  $\leq$  14,000) with respect to the trucks registered in California and other states that have adopted CARB emissions regulations and warranty from the Warranty Start Date\*, whichever occurs first.

In order for MFTA to reimburse the owner for expenses (including diagnosis), not to exceed MFTA's suggested retail price for all warranted parts replaced and labor charges based on MFTA's recommended time allowance for the warranty repair and the geographically appropriate hourly labor rate, the owner may reasonably be required to keep replaced parts and paid invoices.

A part not being available within 30 days or a repair not being complete within 30 days constitutes an emergency.

**REPLACEMENT PARTS**

Any replacement part may be used for maintenance or repairs. The owner should ensure that such parts are equivalent in design and durability to Genuine Mitsubishi Fuso Parts. Use of non-Genuine Mitsubishi Fuso Parts does not invalidate the warranty. However, MFTA is not liable for parts which are not Genuine Mitsubishi Fuso Parts.

**OWNER'S RESPONSIBILITIES**

The owner is responsible for the performance of all required maintenance. A warranty claim will not be denied because the scheduled maintenance was not performed. However, if the lack of required maintenance was the reason for the repair then the claim will be denied.

**MAINTENANCE PARTS**

Any warranted part scheduled for replacement as required maintenance in the written instructions is warranted up to the first scheduled replacement point.

**WARRANTY PARTS LIST**

A list of warranted parts is provided under the heading of "WHAT IS COVERED" of this Emission System Warranty Statement.

**SUBJECT:**

Introduction of Stainless Steel Brake Pad Shims for Canters

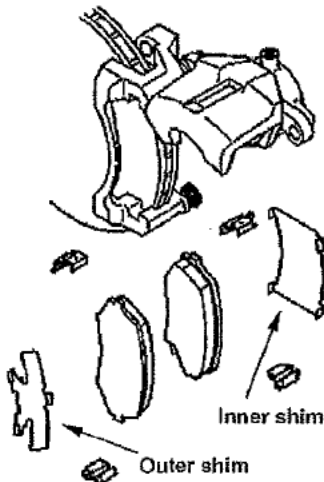

**POTENTIALLY AFFECTED MODELS:**

2012 M/Y and up Canter FE vehicles

**DESCRIPTION:**

Brake pad kits are now available with stainless steel shims. The stainless steel shims are resistant to rust and corrosion and are especially beneficial in cold weather climates where road salt or similar chemicals are frequently used on road surfaces to prevent icing.

# 1. Symptoms

## [Symptoms]

We were notified that, for a small tuck (LIFT) in the market, the step in margin of the brake pedal increased to such an extent that it touched the bottom (i.e. floor) and the effectiveness of brake power went less effective.

- North America: 2 incidents; Japan: 2 incidents (As of 30 November, 2012)
- Accidents not reported
- The two incidents in each of North America and Japan occurred in sites of the same users.

### 1. Situation of Occurrence

- North America: 2 incidents; Japan: 2 incidents (As of 30 Nov., 2012)
- All the four incidents occurred after a lapse of about one year from the date of registration. For 3 out of 4 incidents, the fault occurred when the running distance reached 100 thousand km or more.

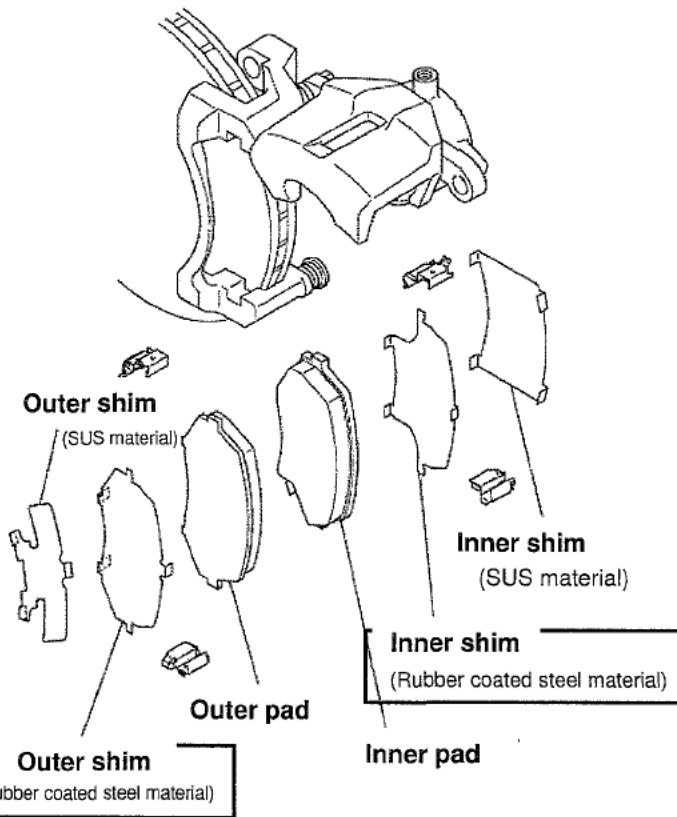

[PQR base: as of 03 Nov., 2013]

# 1. Parts Investigation

The incidents in both North America and Japan are decided to be caused by the same symptom.

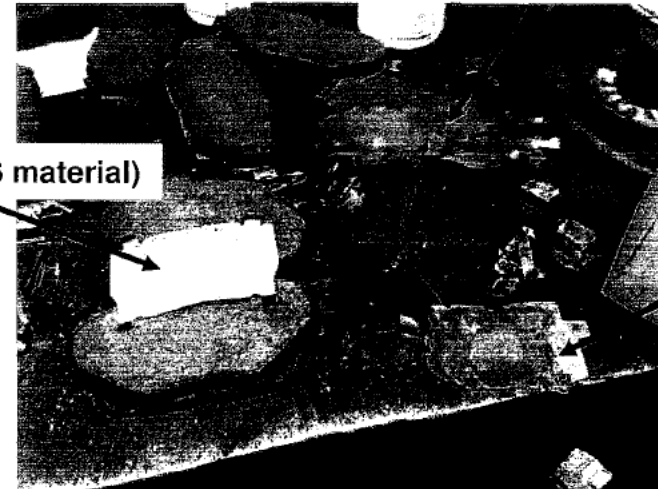

- The outer and inner shims at the installation side of the brake pad were rusted.
- The external shim (SUS material) was not rusted.

There are differences in whether the part is rusted, depending on the material. (Steel material: rusted; SUS material: not rusted)

## 1. Investigation of Operating Situation

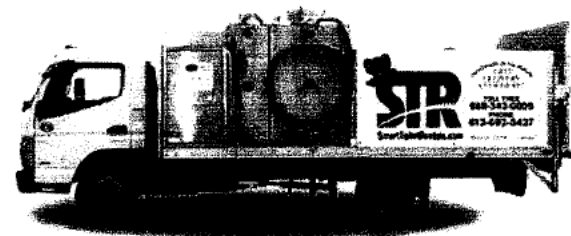

- The affected vehicle's brake shims are susceptible to snow melting agents and used in an environment severe for corrosion.
- The user noticed that the brake pedal showed a sign of increase of the brake pedal step-in margin (detectable).  
(1) 2 vehicles in North America (same user)

**[Sign of problem]**

- There is a testimony that the brake pedal step-in margin came to increase gradually.  
(The user had noticed the sign for a long time. The start time is unknown.)

**[Operating situation]**

- Body mounting: Flat bed plus lift gate (see the right photograph (washing vehicle))
- Operation range: Ottawa, Ontario, Canada  
(In winter, snow melting agents are dispersed on roads.)
- Traveling roads: Expressways - about 60% (max 105 km/h), traveling in the city – about 40% (max 65 km/h)

### (2) 2 vehicles in Japan (same user)

**[Sign of problem]**

- There is a testimony that the brake pedal step-in margin came to increase gradually.  
(The user had noticed the sign for a long time. The start time is unknown.)

**[Operating situation]**

- Body mounting: Wagon
- Goods loaded: Newspapers
- Operation range: Transportation of newspaper from Hiroshima to Tottori, Shimane, and Yamaguchi
- Traveling roads: Chugoku Expressway – about 80%

**[Maintenance situation]**

- They said that the one-year inspection was conducted at workshop.
- They said that the vehicle is frequently washed from the outside by using a high-pressure washer.  
(Because it travels on the Chugoku Expressway and snow melting agents adhere to the vehicle especially in winter.)

## CC-1209-01: [TF EPA10 for North America] Brake Pad Rubber Coated Steel Shim Rust

### 2. Background of Change (Outline)

- Although the fault was dealt with by setting up SUS shim material for auxiliary use in the past, lessons of this were not applied.

Period	Model	Description
1998	TB	A shim rusting problem occurred in the North American market (on 8 vehicles). Switching to SUS shim for countermeasures was performed only for setup for auxiliary use for the following reasons: <Reasons> Similar corrosion resistance also on competitors' products; occurred only in limited regions in North America; and increase in cost
2004	TD	Drawing release of mass-produced vehicles for North America Equipped with SUS shim as standard. We estimate that SUS shim was used as standard for the purpose of improvement of the merchantability (no basis material).
2007	TB	In Europe, a pedal feeling failure occurred due to rust (on 2 vehicles). As a countermeasure, SUS shim was set up as an option. (SUS shim was set up as an option for TD as well.)
2008	LIFT	The development project started. For the following reasons, it started with STEEL shim. - For all the destinations, an attempt was made to unify the specification and reduce the cost by switching to STEEL shim for all the destinations, because a supplier informed us that SUS shim did not exist on competitors' vehicles (switching to SUS shim: +1,600 yen/vehicle).  - Even when the pedal stroke increased due to rusted STEEL shim, no serious accident occurred; we assumed that countermeasures can be taken by setting up SUS shim as an option.
September 09	↑	Increase in shim rust and pedal stroke occurred on C-sample vehicles durable to rough roads, which had traveled on roads with salty water. Although Zeus was issued, it was a corrosion promotion test; we decided that countermeasures can be taken with the optional SUS shim setup. A design response was made by notifying that mass production would not be needed, and Zeus was closed (Zeus No.:904264).
03/2011	↑	Started selling for North America. Equipped with STEEL shim as a standard.
03/2011	↑	Started the considerations relating to the optional SUS shim setup. (Contents considered: As a result of the test and evaluation after abolishment of SUS shim, it could not be adopted because of a loud breaking squeak. Considered switching to SUS shim in 2012 and later.)
06/2012	↑	A shim rusting problem occurred in the North American market.
July 12	↑	EO drawing release for switching to SUS shim
August 12	↑	A shim rusting problem occurred in the Japanese market.

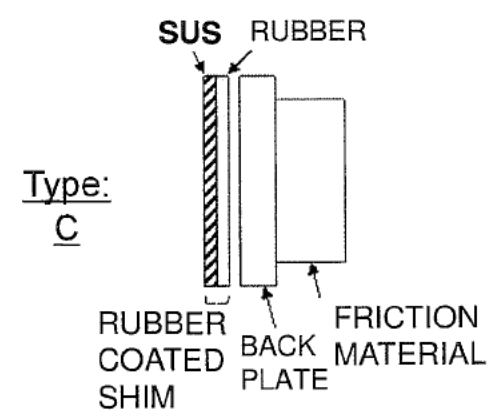

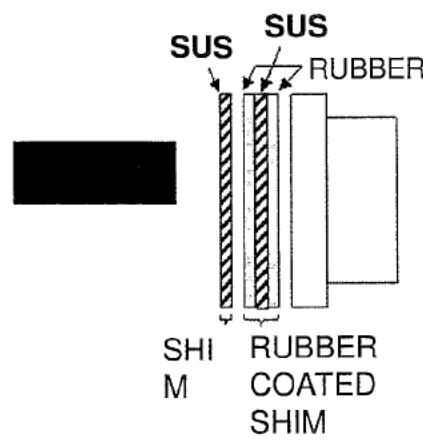

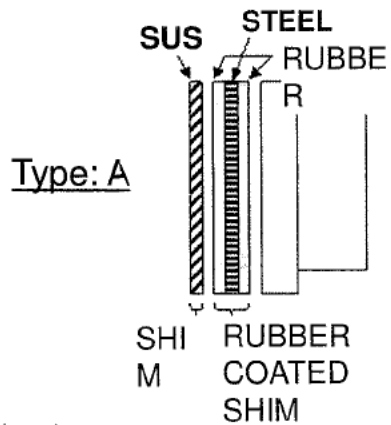

## 2. Background of Change (Shim Type)

- It was insufficient to make the verification concerning the necessity for SUS shim by referring to the past fault cases.

### 2. Result of Checking an Actual Vehicle

- The pad included degradation that is at a similar degree of the worst assumed product in the market.
- Consideration: Irrespective of a severe environment of use, the increase in pedal stroke caused by rusted pad is within the scope of assumption.
- The pedal stroke increased due to the rusted shim.
- Consideration: Due to the rusted shim, the stroke may have increased to such an extent that the pedal touched the bottom (i.e. floor).

## 2. Consideration of Generating Mechanism

- Main causes of this fault are shim rusting, expansion, and decreased stiffness.

[When the fault occurred (brake operated)]  
Larger piston stroke

[Reference] stroke  
When the piston stroke increases by 0.1 mm, the pedal stroke increases by 13 mm.

Normal use

Degradation of pad (heat, poured water)

Decrease in stiffness of pad (heat degradation, corrosion)

Increase in brake pedal stroke

In addition

A large amount of water and snow melting agents adhered to the shim.

Rusted from shim end face (Steel material was exposed at the end face)

The shim expanded due to rust.

Decrease in shim stiffness

Larger piston stroke  
→ The brake pedal step-in margin increases.

Present fault

### 3. Target Range [Consideration]

For the following reasons,  $\Phi 252$  mounting vehicles are targeted.

- The present fault is that the step-in margin increases to such an extent that the brake pedal moves to the full stroke and occurs only at a size of  $\Phi 252$ .

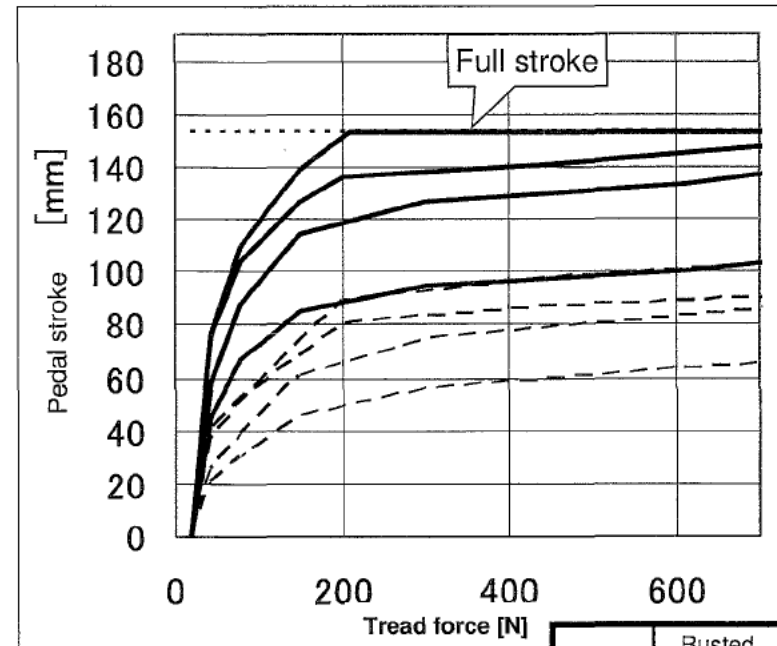

- We verified the possibility of similar symptoms for other brake sizes. As a result, we confirmed that the pedal stroke does not reach the bottom except for the  $\Phi 252$  DISC even if the pedal is rusted.

### 3. Consideration continued

- Also regarding brake pedals for TD, the pedal stroke does not reach the bottom except for the  $\Phi 252$  DISC vacuum servo vehicle (handled for SUS shim) even if the shim is rusted.

## CC-1209-01: [TF EPA10 for North America] Brake Pad Rubber Coated Steel Shim Rust

### 3. Target Period (Volume)

- About 16,500 LIFT vehicles equipped with  $\Phi 252$  shim are targeted.
- The occurrence ratio of fault is about 0.02% (4 incidents for 16,500 vehicles)

[Number of targeted vehicles]  
Dom: About 5,000 vehicles  
Exp: About 11,500 vehicles  
[Investigation period: 26/05/2010 to 26/09/2012]

4. Final Symptom

- Although the braking power decreases due to rusted shim, the fault is detectable owing to the increase in pedal stroke. Even if the vehicle travels continuously and the pedal reaches the bottom in the worst case, the braking power exceeds the requirements in the legal regulation and is secured.

- The description for pedal stroke check is included in the section of daily pre-operation inspection in the owner's manual as well, and we decide that the fault is detectable.

Rusting on the shim

Decrease in shim stiffness

Larger piston stroke  
→ The brake pedal step-in margin increases.

Detectable  
(The user incurring the fault also detected this.)  
In addition, it is detectable by daily pre-operation inspection as well.

Although the pedal reaches the bottom in the worst case, the braking power satisfies the deceleration requirements in the legal regulation.

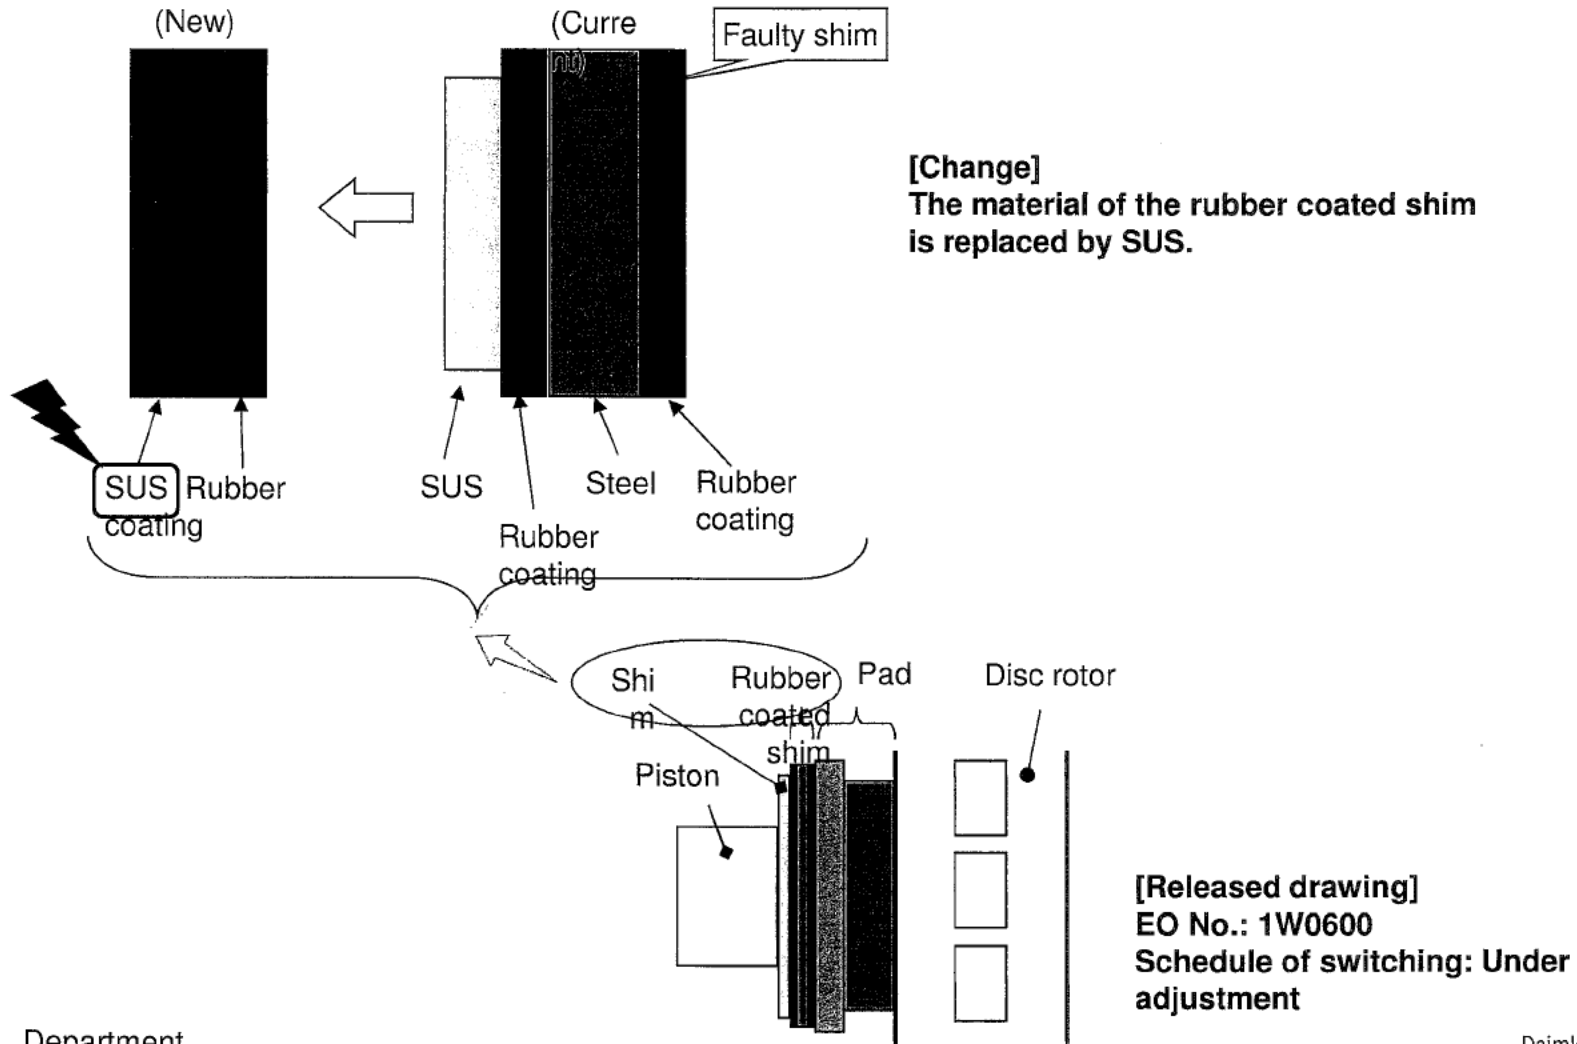

[Contents of daily pre-operation inspection]

- Press the pedal to the full stroke to check that there is a space between the pedal and the floor.
- While the vehicle is traveling at a low speed, operate the pedal to check the effectiveness of the brake.

Specification	Maximum deceleration generated	Legal adaptability
Φ252 DISC Pedal ratio 3.2	5.9 m/s <sup>2</sup>	Adaptable (> 5 m/s <sup>2</sup> )
Φ252 DISC Pedal ratio 3.6	6.4 m/s <sup>2</sup>	Adaptable (> 5 m/s <sup>2</sup> )

5. Countermeasures

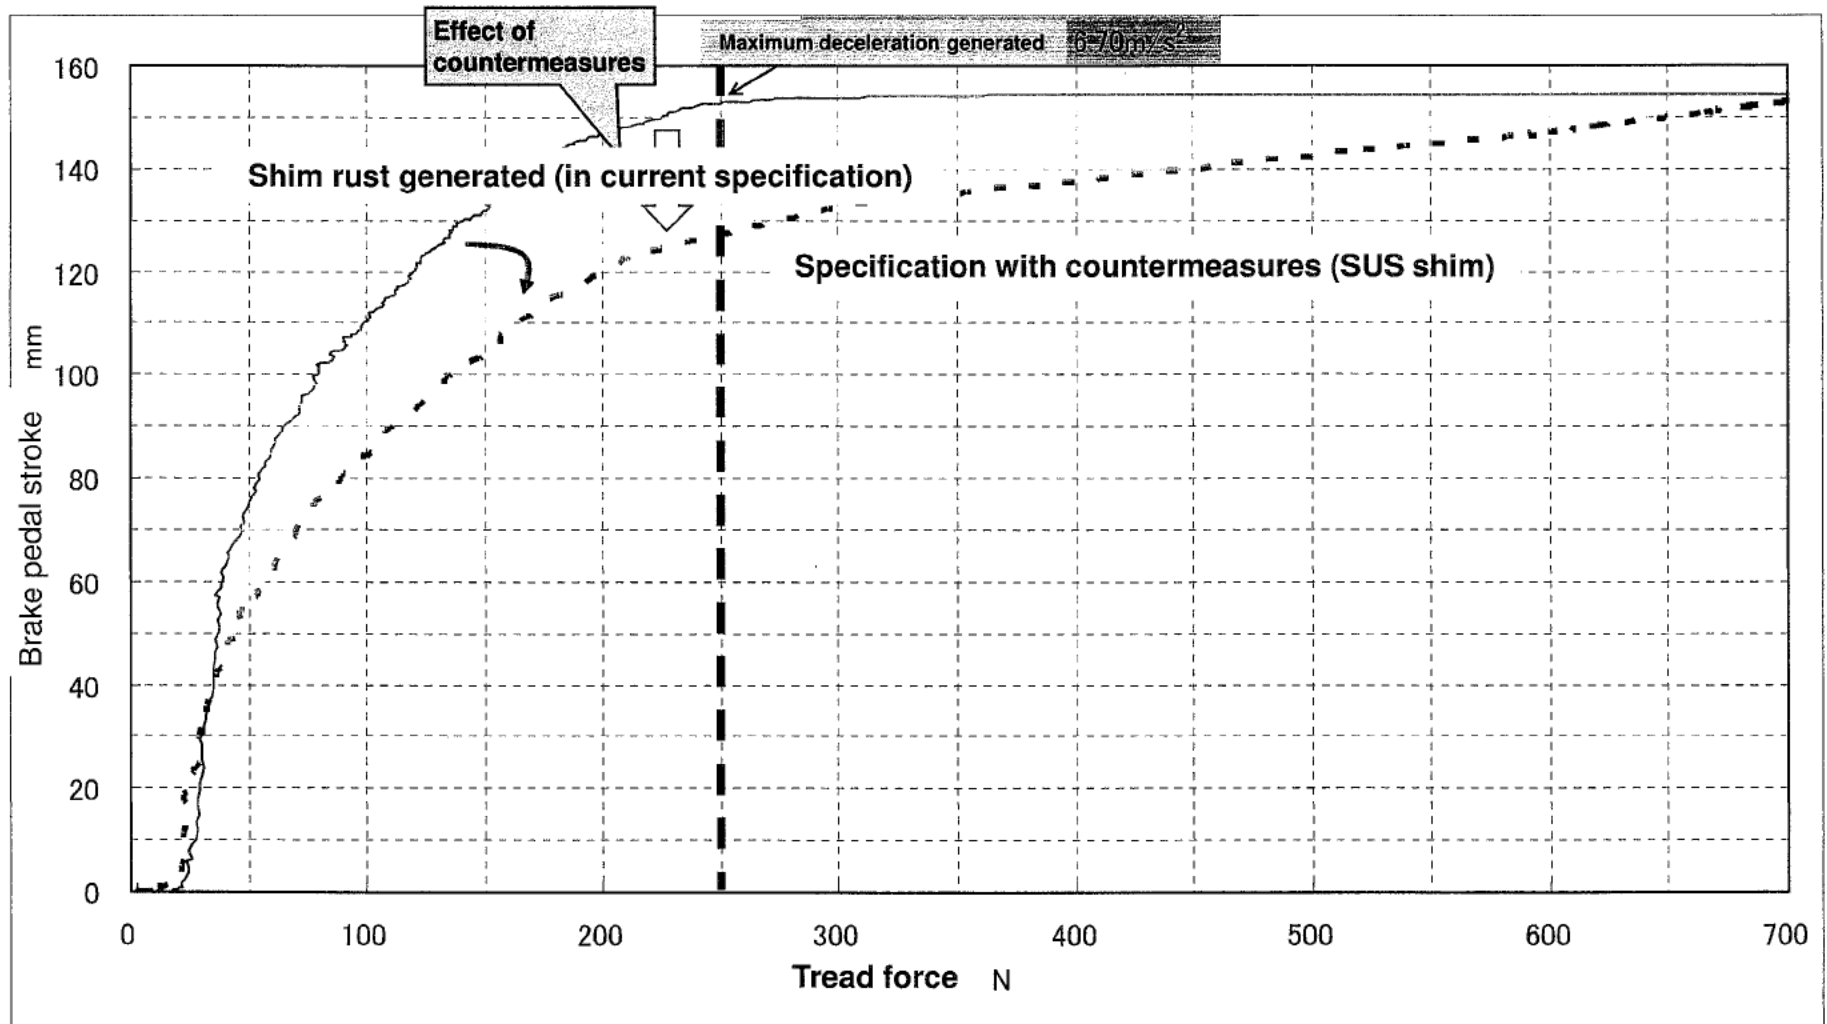

- The material of the rubber coated shim is replaced by SUS material (from steel) in order to control increase in pedal stroke.

### 6. Verification of Countermeasures

- Use of the countermeasure part prevented rusting on the shim and prevented the pedal from reaching the bottom (without decrease in the deceleration generated).

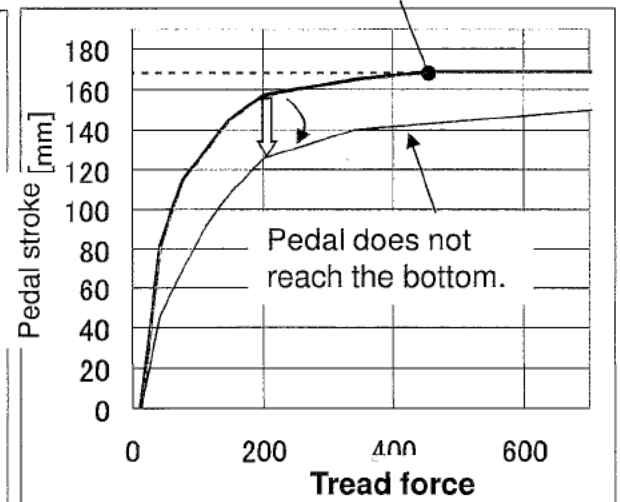

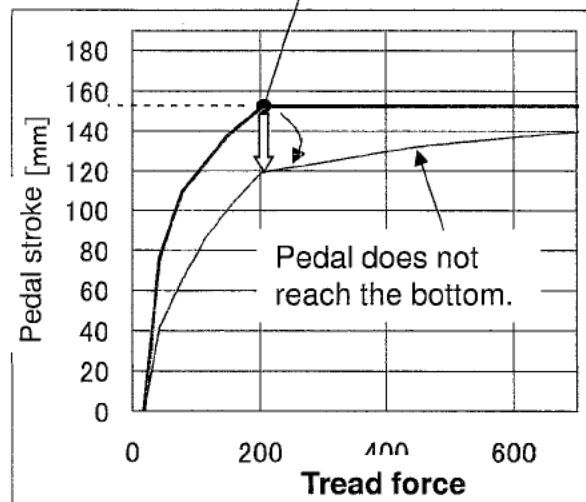

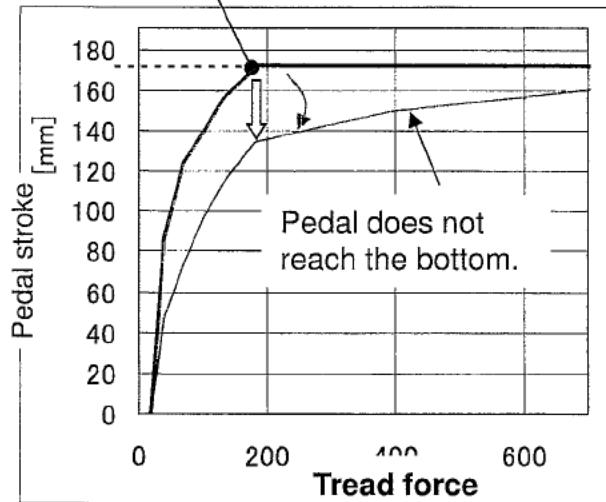

6. Verification of Countermeasures (Details)

- Use of the countermeasure part prevented rusting on the shim and prevented the pedal from reaching the bottom (without decrease in the deceleration generated).

**7. Action Considerations**

For this matter, no action is taken for the following reasons:

- Although the braking power decreases due to rusted shim, the fault is detectable owing to the increase in pedal stroke. Even if the vehicle travels continuously and the pedal reaches the bottom in the worst case, the braking power exceeds the requirements in the legal regulation and is secured.
- The material of the rubber coated shim is replaced by SUS material (from steel) in order to control increase in pedal stroke. (Switching of production: Scheduled in late December 2012, 1W0600)  
A single SUS shim part is set up for auxiliary use (2W0102).

Item to consider	Element	Contents considered	Decision
Symptom	Final symptom	- Although the braking power decreases due to rusted shim, the fault is detectable owing to the increase in pedal stroke. Even if the vehicle travels continuously and the pedal reaches the bottom in the worst case, the braking power satisfies the requirements in the legal regulation and is secured.	Merchantability-related matter
	Detectability	- Although the braking power decreases due to rusted shim, the fault is detectable owing to the increase in pedal stroke.  - The description for pedal stroke check is included in the section of daily pre-operation inspection in the owner's manual as well, and we decide that the fault is detectable.	Detectable
Responsibilities of manufacturer	Development defect	- It was insufficient to make the verification concerning the necessity for SUS shim by referring to the past fault cases.	With development defect
	Manufacturing defect	No problem with manufacturing	No manufacturing defect
Reflection of production	Switching of production	- The material of the rubber coated shim is replaced by SUS material (from steel) in order to control increase in the pedal stroke (1W0600). - The shim for designed for production is set up also for auxiliary use.	Braking measures are available.

12. Furnish Mitsubishi's assessment of the alleged defect in the subject vehicle, including:

a. The causal or contributory factor(s); •

The anti-corrosion specification for the shim was insufficient under the severe conditions.

b. The failure mechanism(s);

Corrosion decreases the stiffness of shim, increasing the caliper piston stroke. Accordingly, the brake pedal stroke is increased.

c. The failure mode(s);

Excessive brake pedal stroke decreases braking performance.

d. The risk to motor vehicle safety that it poses;

Braking performance meets safety standards even if brake pedal goes to the floor. Therefore, this failure is not a safety issue.

e. What warnings, if any, the operator and the other persons both inside and outside the

vehicle would have that the alleged defect was occurring or subject component was

malfunctioning; and

The driver can discover this failure, because brake pedal stroke will be increased.

f. The reports included with this inquiry.

The report is attached.

# 1. Symptoms

## [Symptoms]

We were notified that, for a small tuck (LIFT) in the market, the step in margin of the brake pedal increased to such an extent that it touched the bottom (i.e. floor) and the effectiveness of brake power went less effective.

- North America: 2 incidents; Japan: 2 incidents (As of 30 November, 2012)
- Accidents not reported
- The two incidents in each of North America and Japan occurred in sites of the same users.

### 1. Situation of Occurrence

- North America: 2 incidents; Japan: 2 incidents (As of 30 Nov., 2012)
- All the four incidents occurred after a lapse of about one year from the date of registration. For 3 out of 4 incidents, the fault occurred when the running distance reached 100 thousand km or more.

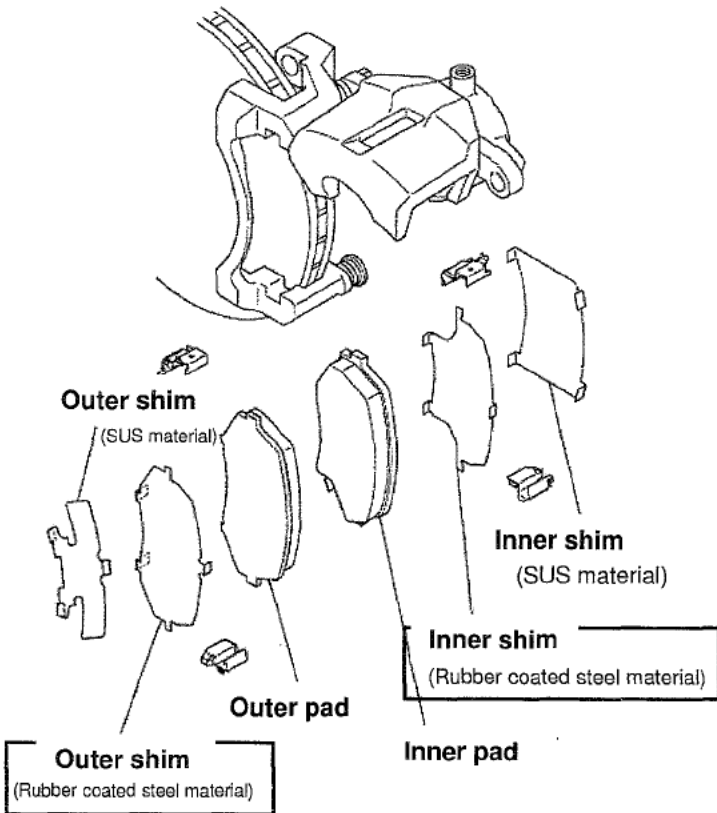

[PQR base: as of 03 Nov., 2013]

# 1. Parts Investigation

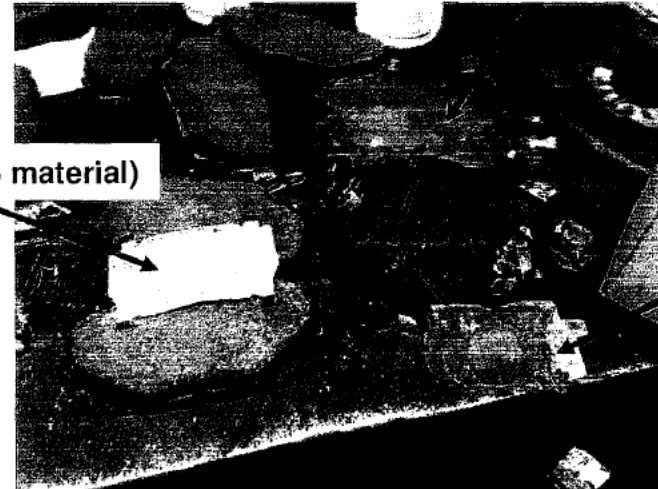

- The incidents in both North America and Japan are decided to be caused by the same symptom.
- The outer and inner shims at the installation side of the brake pad were rusted.
  - The external shim (SUS material) was not rusted.

There are differences in whether the part is rusted, depending on the material. (Steel material: rusted; SUS material: not rusted)

Not rusted (SUS material)

## 1. Investigation of Operating Situation

- The affected vehicle's brake shims are susceptible to snow melting agents and used in an environment severe for corrosion.
- The user noticed that the brake pedal showed a sign of increase of the brake pedal step-in margin (detectable).

### (1) 2 vehicles in North America (same user)

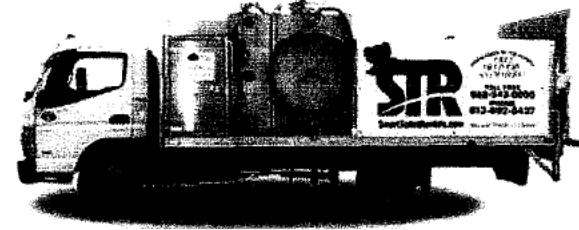

**[Sign of problem]**

- There is a testimony that the brake pedal step-in margin came to increase gradually.

(The user had noticed the sign for a long time. The start time is unknown.)

**[Operating situation]**

- Body mounting: Flat bed plus lift gate (see the right photograph (washing vehicle))
- Operation range: Ottawa, Ontario, Canada  
(In winter, snow melting agents are dispersed on roads.)
- Traveling roads: Expressways - about 60% (max 105 km/h), traveling in the city – about 40% (max 65 km/h)

### (2) 2 vehicles in Japan (same user)

**[Sign of problem]**

- There is a testimony that the brake pedal step-in margin came to increase gradually.

(The user had noticed the sign for a long time. The start time is unknown.)

**[Operating situation]**

- Body mounting: Wagon
- Goods loaded: Newspapers
- Operation range: Transportation of newspaper from Hiroshima to Tottori, Shimane, and Yamaguchi
- Traveling roads: Chugoku Expressway – about 80%

**[Maintenance situation]**

- They said that the one-year inspection was conducted at workshop.
- They said that the vehicle is frequently washed from the outside by using a high-pressure washer.  
(Because it travels on the Chugoku Expressway and snow melting agents adhere to the vehicle especially in winter.)

## CC-1209-01: [TF EPA10 for North America] Brake Pad Rubber Coated Steel Shim Rust

### 2. Background of Change (Outline)

- Although the fault was dealt with by setting up SUS shim material for auxiliary use in the past, lessons of this were not applied.

Period	Model	Description
1998	TB	A shim rusting problem occurred in the North American market (on 8 vehicles). Switching to SUS shim for countermeasures was performed only for setup for auxiliary use for the following reasons: <Reasons> Similar corrosion resistance also on competitors' products; occurred only in limited regions in North America; and increase in cost
2004	TD	Drawing release of mass-produced vehicles for North America Equipped with SUS shim as standard. We estimate that SUS shim was used as standard for the purpose of improvement of the merchantability (no basis material).
2007	TB	In Europe, a pedal feeling failure occurred due to rust (on 2 vehicles). As a countermeasure, SUS shim was set up as an option. (SUS shim was set up as an option for TD as well.)
2008	LIFT	The development project started. For the following reasons, it started with STEEL shim. - For all the destinations, an attempt was made to unify the specification and reduce the cost by switching to STEEL shim for all the destinations, because a supplier informed us that SUS shim did not exist on competitors' vehicles (switching to SUS shim: +1,600 yen/vehicle).  - Even when the pedal stroke increased due to rusted STEEL shim, no serious accident occurred; we assumed that countermeasures can be taken by setting up SUS shim as an option.
September 09	↑	Increase in shim rust and pedal stroke occurred on C-sample vehicles durable to rough roads, which had traveled on roads with salty water. Although Zeus was issued, it was a corrosion promotion test; we decided that countermeasures can be taken with the optional SUS shim setup. A design response was made by notifying that mass production would not be needed, and Zeus was closed (Zeus No.:904264).
03/2011	↑	Started selling for North America. Equipped with STEEL shim as a standard.
03/2011	↑	Started the considerations relating to the optional SUS shim setup. (Contents considered: As a result of the test and evaluation after abolishment of SUS shim, it could not be adopted because of a loud breaking squeak. Considered switching to SUS shim in 2012 and later.)
06/2012	↑	A shim rusting problem occurred in the North American market.
July 12	↑	EO drawing release for switching to SUS shim
August 12	↑	A shim rusting problem occurred in the Japanese market.

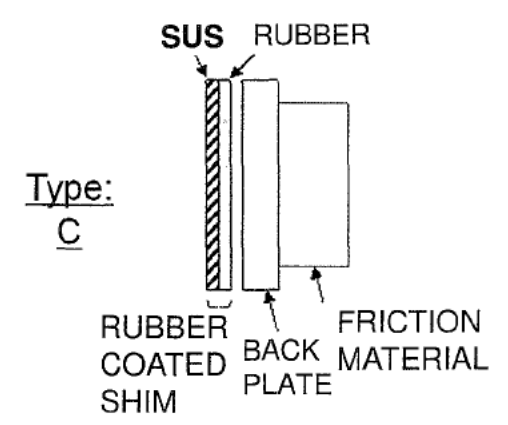

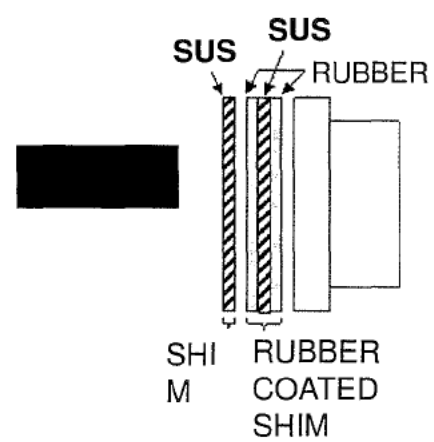

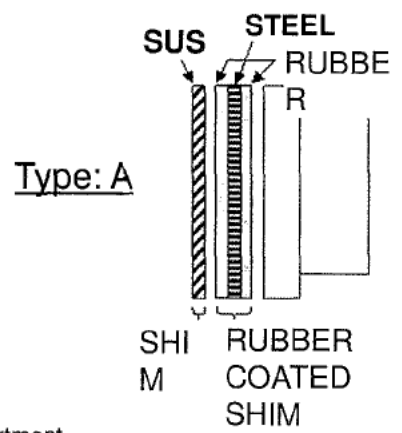

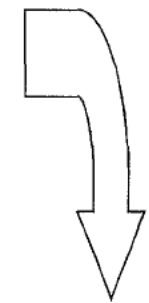

## 2. Background of Change (Shim Type)

- It was insufficient to make the verification concerning the necessity for SUS shim by referring to the past fault cases.

## CC-1209-01: [TF EPA10 for North America] Brake Pad Rubber Coated Steel Shim Rust

### 2. Result of Checking an Actual Vehicle

- The pad included degradation that is at a similar degree of the worst assumed product in the market.
- Consideration: Irrespective of a severe environment of use, the increase in pedal stroke caused by rusted pad is within the scope of assumption.
- The pedal stroke increased due to the rusted shim.
- Consideration: Due to the rusted shim, the stroke may have increased to such an extent that the pedal touched the bottom (i.e. floor).

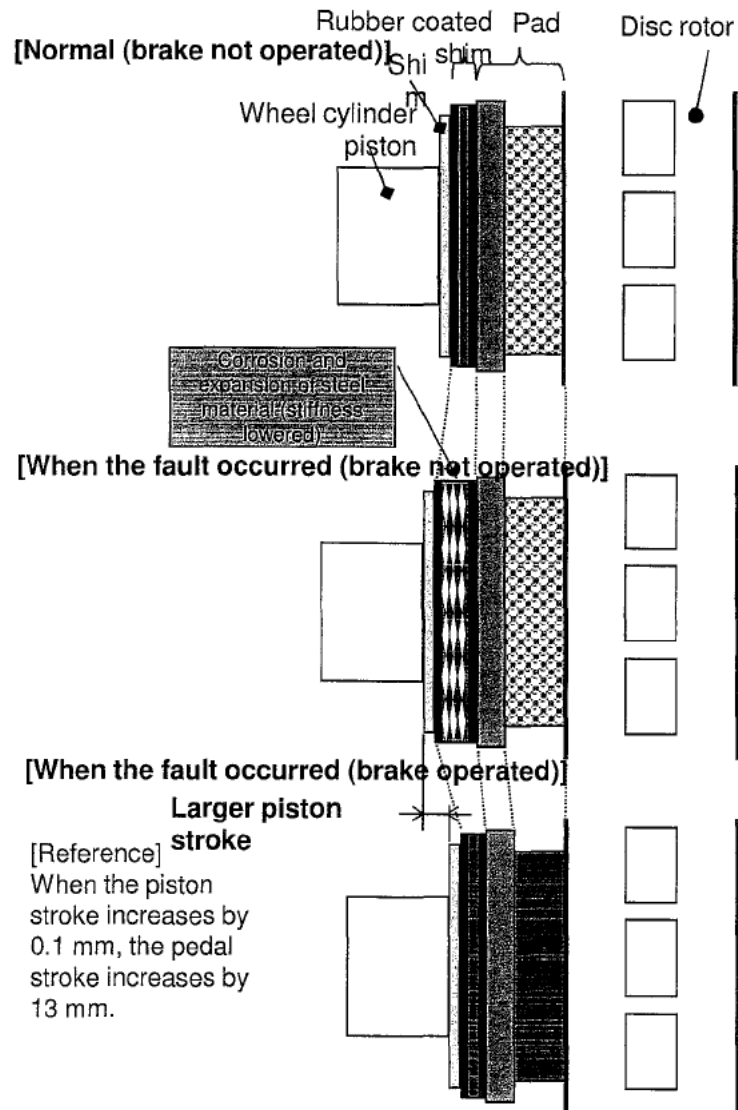

# CC-1209-01: [TF EPA10 for North America] Brake Pad Rubber Coated Steel Shim Rust

## 2. Consideration of Generating Mechanism

- Main causes of this fault are shim rusting, expansion, and decreased stiffness.

[Reference]  
When the piston stroke increases by 0.1 mm, the pedal stroke increases by 13 mm.

Normal use

Degradation of pad (heat, poured water)

Decrease in stiffness of pad (heat degradation, corrosion)

Increase in brake pedal stroke

In addition

A large amount of water and snow melting agents adhered to the shim.

Rusted from shim end face (Steel material was exposed at the end face)

The shim expanded due to rust.

Decrease in shim stiffness

Larger piston stroke  
→ The brake pedal step-in margin increases.

Present fault

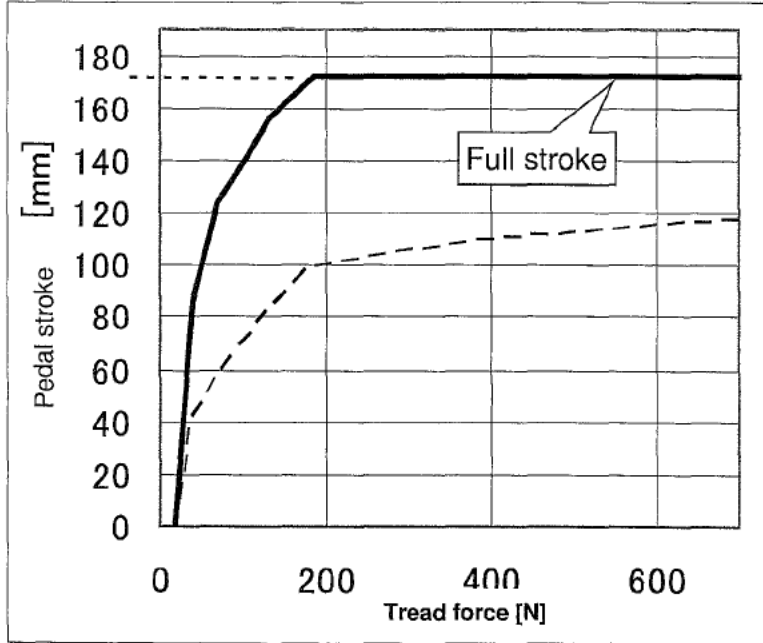

3. Target Range [Consideration]

For the following reasons,  $\Phi 252$  mounting vehicles are targeted.

- The present fault is that the step-in margin increases to such an extent that the brake pedal moves to the full stroke and occurs only at a size of  $\Phi 252$ .

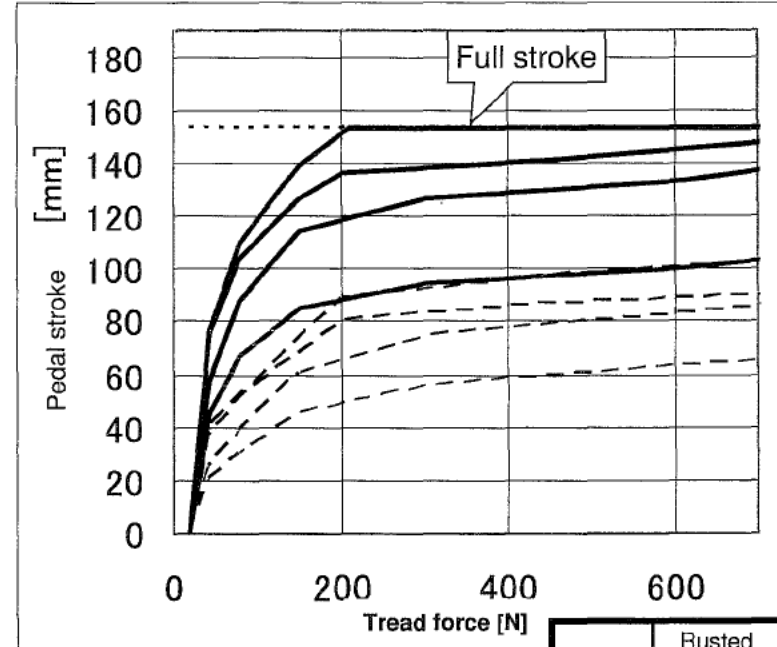

- We verified the possibility of similar symptoms for other brake sizes. As a result, we confirmed that the pedal stroke does not reach the bottom except for the  $\Phi 252$  DISC even if the pedal is rusted.

### 3. Consideration continued

- Also regarding brake pedals for TD, the pedal stroke does not reach the bottom except for the  $\Phi 252$  DISC vacuum servo vehicle (handled for SUS shim) even if the shim is rusted.

3. Target Period (Volume)

- About 16,500 LIFT vehicles equipped with  $\Phi$ 252 shim are targeted.
- The occurrence ratio of fault is about 0.02% (4 incidents for 16,500 vehicles)

[Number of targeted vehicles]  
 Dom: About 5,000 vehicles  
 Exp: About 11,500 vehicles  
 [Investigation period: 26/05/2010 to 26/09/2012]

#### 4. Final Symptom

- Although the braking power decreases due to rusted shim, the fault is detectable owing to the increase in pedal stroke. Even if the vehicle travels continuously and the pedal reaches the bottom in the worst case, the braking power exceeds the requirements in the legal regulation and is secured.

- The description for pedal stroke check is included in the section of daily pre-operation inspection in the owner's manual as well, and we decide that the fault is detectable.

Rusting on the shim

Decrease in shim stiffness

Larger piston stroke  
→ The brake pedal step-in margin increases.

**Detectable**  
(The user incurring the fault also detected this.)  
In addition, it is detectable by daily pre-operation inspection as well.

Although the pedal reaches the bottom in the worst case, the braking power satisfies the deceleration requirements in the legal regulation.

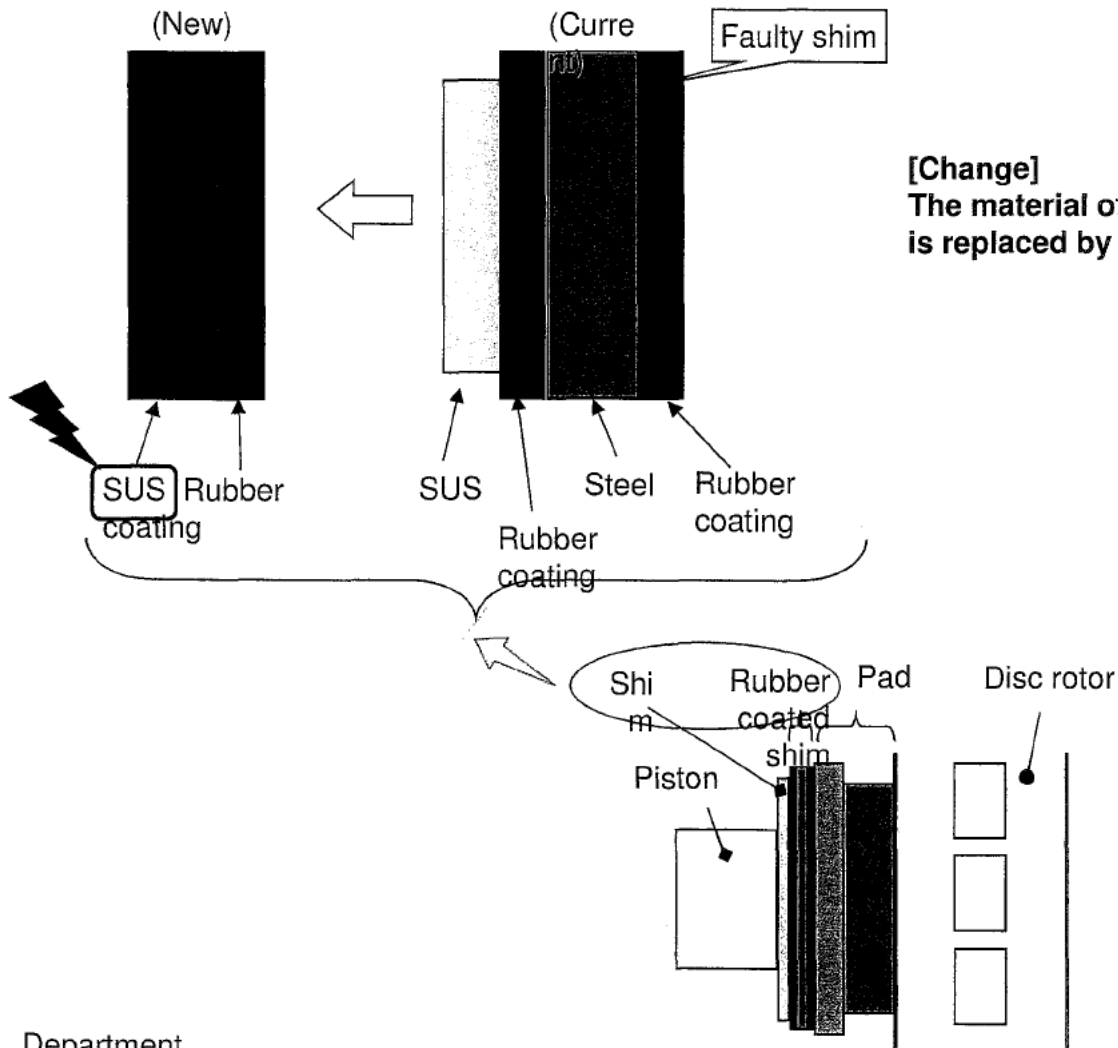

[Contents of daily pre-operation inspection]

- Press the pedal to the full stroke to check that there is a space between the pedal and the floor.
- While the vehicle is traveling at a low speed, operate the pedal to check the effectiveness of the brake.

Specification	Maximum deceleration generated	Legal adaptability
Φ252 DISC Pedal ratio 3.2	5.9 m/s <sup>2</sup>	Adaptable (> 5 m/s <sup>2</sup> )
Φ252 DISC Pedal ratio 3.6	6.4 m/s <sup>2</sup>	Adaptable (> 5 m/s <sup>2</sup> )

5. Countermeasures

- The material of the rubber coated shim is replaced by SUS material (from steel) in order to control increase in pedal stroke.

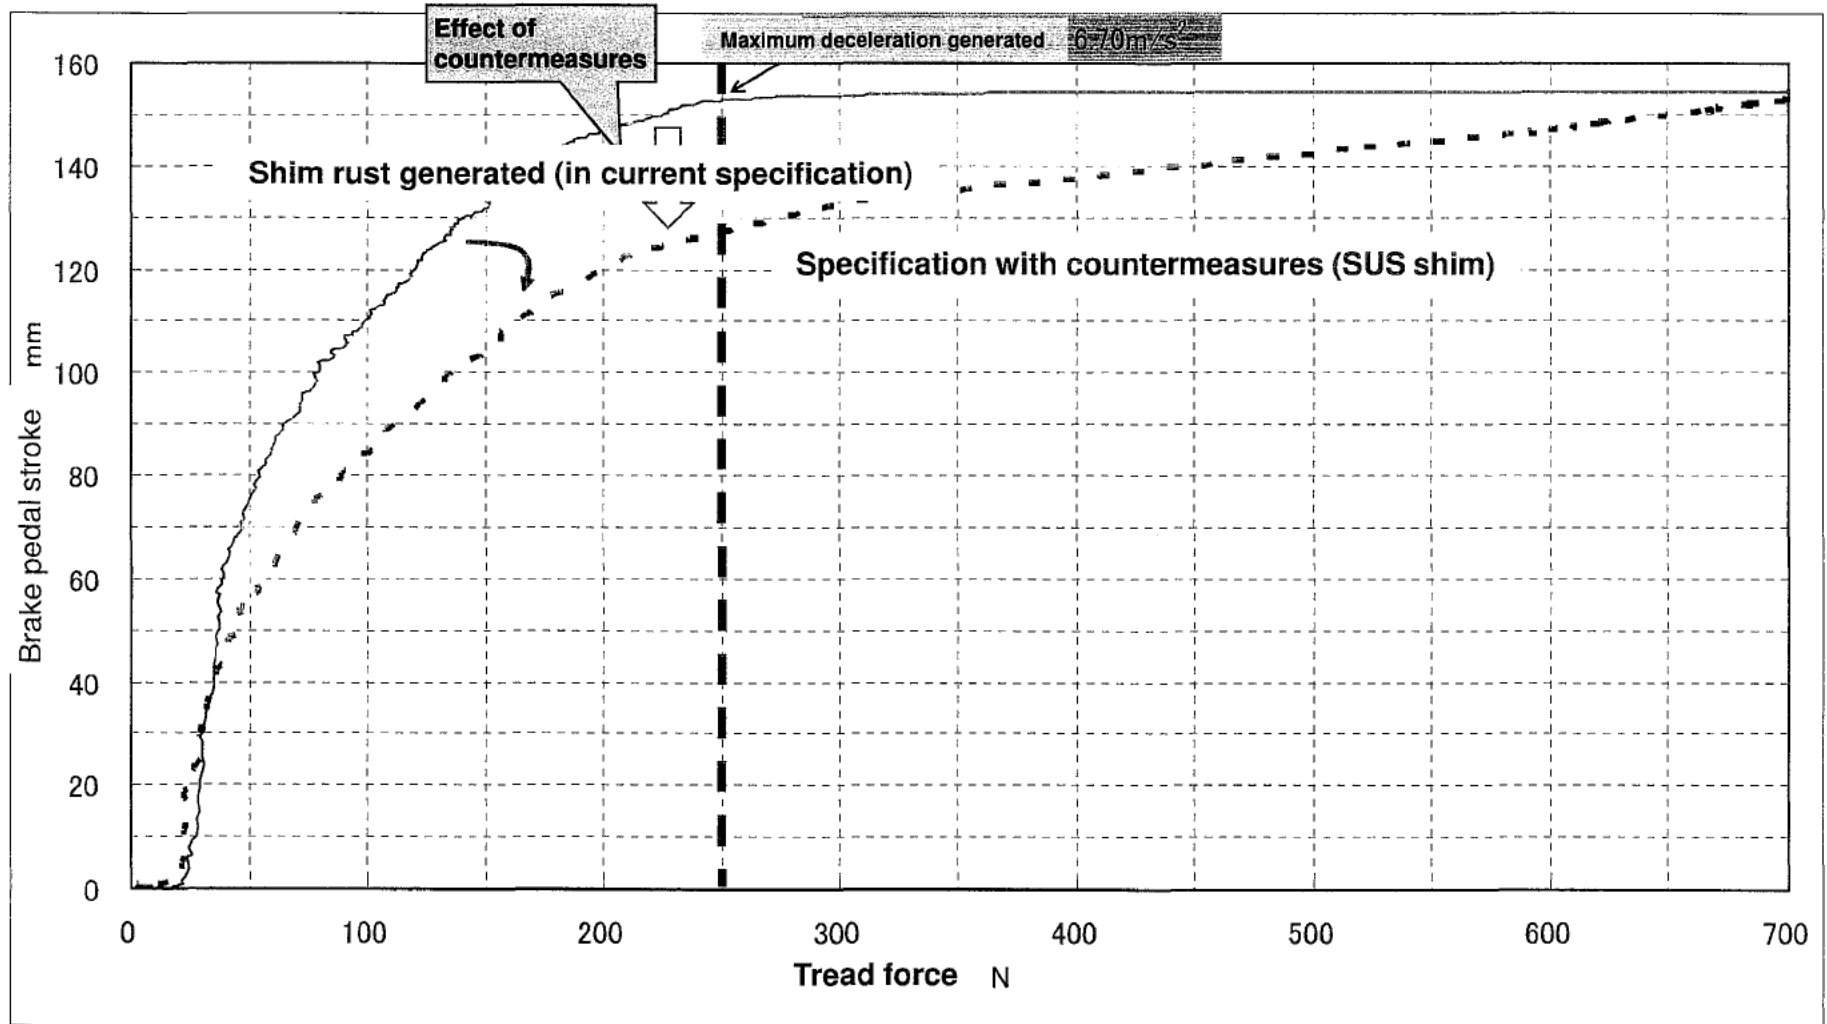

[Change]  
The material of the rubber coated shim is replaced by SUS.

EO No.: 1W0600

### 6. Verification of Countermeasures

- Use of the countermeasure part prevented rusting on the shim and prevented the pedal from reaching the bottom (without decrease in the deceleration generated).

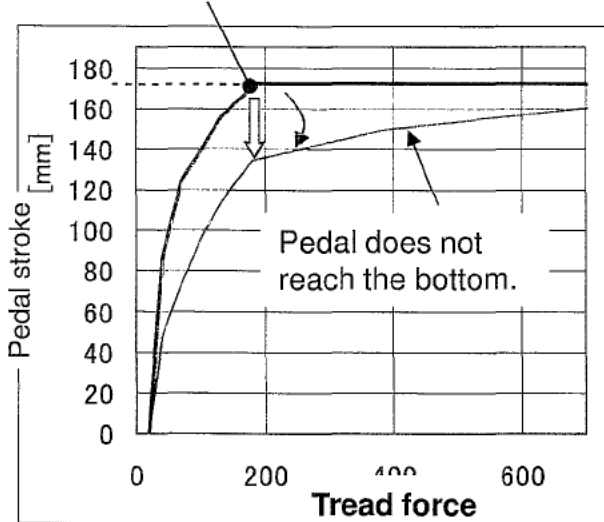

6. Verification of Countermeasures (Details)

- Use of the countermeasure part prevented rusting on the shim and prevented the pedal from reaching the bottom (without decrease in the deceleration generated).

**7. Action Considerations**

For this matter, no action is taken for the following reasons:

- Although the braking power decreases due to rusted shim, the fault is detectable owing to the increase in pedal stroke. Even if the vehicle travels continuously and the pedal reaches the bottom in the worst case, the braking power exceeds the requirements in the legal regulation and is secured.

- The material of the rubber coated shim is replaced by SUS material (from steel) in order to control increase in pedal stroke. (Switching of production: Scheduled in late December 2012, 1W0600)

A single SUS shim part is set up for auxiliary use (2W0102).

Item to consider	Element	Contents considered	Decision
Symptom	Final symptom	- Although the braking power decreases due to rusted shim, the fault is detectable owing to the increase in pedal stroke. Even if the vehicle travels continuously and the pedal reaches the bottom in the worst case, the braking power satisfies the requirements in the legal regulation and is secured.	Merchantability-related matter
	Detectability	- Although the braking power decreases due to rusted shim, the fault is detectable owing to the increase in pedal stroke.  - The description for pedal stroke check is included in the section of daily pre-operation inspection in the owner's manual as well, and we decide that the fault is detectable.	Detectable
Responsibilities of manufacturer	Development defect	- It was insufficient to make the verification concerning the necessity for SUS shim by referring to the past fault cases.	With development defect
	Manufacturing defect	No problem with manufacturing	No manufacturing defect
Reflection of production	Switching of production	- The material of the rubber coated shim is replaced by SUS material (from steel) in order to control increase in the pedal stroke (1W0600). - The shim for designed for production is set up also for auxiliary use.	Braking measures are available.
