Subject: VIN 1FM5K7B88EG[redacted] need to order updated exhaust EB5Z-5230-A

Greetings.

According to a report I received from the Technical Hotline, This vehicle is (VIN# 1FM5K7B88EG[redacted]) in your shop with a complaint of exhaust odor on acceleration.

If you verify this vehicle is present, please order a new (updated) exhaust assembly for it. The part number you need is: EB5Z-5230-A.** 2 Days

**This part has just been released for North America, it does not yet appear in TSB 14-0130.

That part will be on backorder, and may take a few weeks to show up.

The vehicle is fine to drive while we are waiting on the part to arrive, as long as you are sure the Customer will eventually return to have the part put on.

You may wish to have your Parts Department order one, then upgrade the order as necessary to get an ETA on when the part may arrive.

I will try to stop by sometime later week to speak with Mike Marion and/or you and/or your Service Advisor as necessary to help explain what is different about this exhaust.

Thanks.

FSE VEHICLE INSPECTION REPORT

Date of Inspection: 6-24-2015 Inspection by: Adam Kuffel

Customer Name: [redacted]

CuDL Case #: CAS-7360506-H7R5Z2

Vehicle Year / Model: 2015 EXPLORER

VIN: 1FM5K7F81FG[redacted]

Current Mileage: 17,623

Dealership: Jarrett Gordon Ford

City & State: Davenport, FL

1. Customer's Concerns:

Customer states: Exhaust fumes are entering the vehicle through the air conditiong vents.

2. Inspection/Test Performed/Results: (List all customer concern(s) separately)

I inspected this vehicle on 6-24-2015. I inspected for the completion of TSB, found that some seams had not been sealed completely. I also checked the HVAC module for a calibration update. The vehicle had no DTC's, and the vehicle passes KOEO & KOER on demand self tests. I test drove the vehicle for a total of 27 miles. The vehicle has a light sulfur odor only after a hard acceleration (like passing on a two lane road). During normal driving there is no odor noticed in the vehicle.

3. Repairs Performed: (Per concern)

We resealed the rear of the vehicle, and updated the HVAC module to the latest available calibration per TSB 14-0130.

4. Conclusion:

Please do not repurchase this vehicle. This vehicle does not have a substantial Defect that affects the Use, Value or Safety of the vehicle.

Subject: Explorer Exhaust Odor

Bennie,

We've seen an increase in the number of warranty claims for exhaust order in the ME since the release of a new, ME specific, TSB back on 10/31/14. As you recall, the Climate Control re-flash that opened the recirculation door during certain conditions could not be used in the GCC markets. As an alternative, a 90 degree, down-turned, exhaust tip was developed for those markets (see attached TSB). The release of the ME specific TSB coincided with the availability of the down-turned exhaust tips.

Explorer TSB 14-16-NA.pdf

The graphs below show the number of repairs by month and also by repair country. Please let me know if you have any further questions.

EXPLORER EXHAUST ODOR IN VEHICLE	TSB 14-16-NA

FORD:
2011-2015 Explorer

This article supersedes TSB 14-04-NA and 14-14-NA to update the service procedure and parts.

ISSUE:
Some 2011-2015 Explorer vehicles may exhibit an exhaust odor in the vehicle while the climate control system is in auto or recirculation mode. This may be more pronounced after hard acceleration, driving in hilly conditions and/or towing a trailer. Customers may indicate the odor smells like sulfur.

NOTE: This procedure should be used only for vehicles which involve a customer complaint of exhaust odor and/or exhaust odor verified through a road test by a Ford trained technician. The odor concern is affected by many factors, including road conditions, driving style, climate, HVAC settings, trailer towing, and the particular customer's sensitivity to odor. Most customers have not complained of this exhaust odor problem. There are trade-offs associated with this TSB procedure, and those trade-offs could lead to complaints of increased noise from exhaust air rush.

ACTION
Follow the Service Procedure steps to correct the condition.

SERVICE PROCEDURE
1. Remove the rear lip moldings (vehicles built prior to February 1, 2013 only) and remove bumper cover. Refer to Workshop Manual (WSM), Section 501-19.

2. Replace the left side rear air extractor. (Figure 1)

Figure 1 - Article 14-16-NA

Copyright © 2014 Ford Motor Company Online Publication Date October 31, 2014

3. Open the liftgate and install a new drain valve in each of the two (2) drain holes on the left and right side of the liftgate. Apply a slight amount of sealant on the drain valves used in the liftgate drain holes to keep them from coming loose. (Figure 2)

Figure 2 – Article 14-16-NA

4. Raise vehicle on hoist. Refer to WSM, Section 100-02.

5. Lower and support rear section of the exhaust system.

6. Clean areas on underside of vehicle where seam sealer will be applied. (Figures 3-5 below)

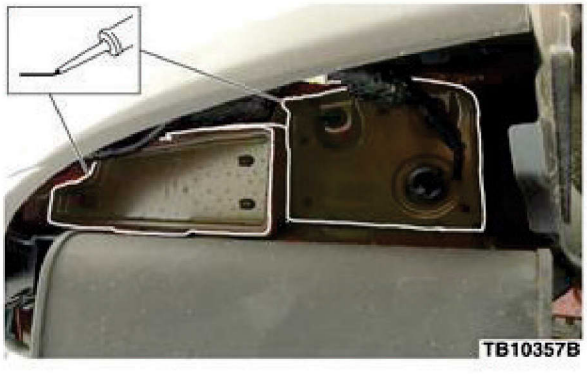

Figure 3 – Article 14-16-NA

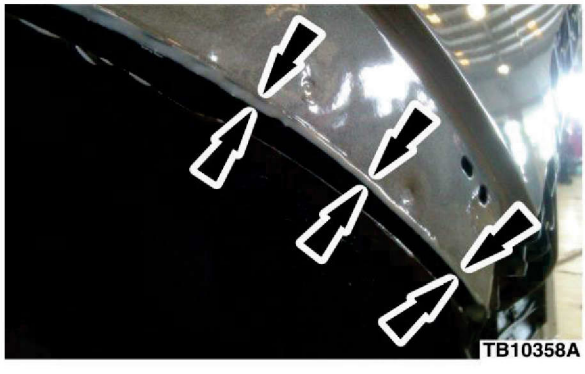

Figure 4 Article – 14-16-NA

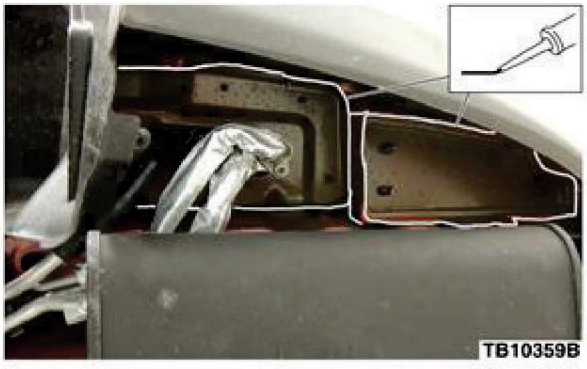

Figure 5 – Article 14-16-NA

7. Cover the exhaust system and auxiliary climate control drain to prevent the seam sealer from getting on these parts or clogging the drain during sealer application.

8. Apply a generous amount of Motorcraft Seam Sealer to rear horizontal sheet metal lap joints on left and right sides of the vehicle, and the rear sheet metal overlap flange across the rear of the vehicle. Make sure the sealant has sealed the openings and remove if any excessive sealant applied. (Figures 3-5 above)

9. Spray generous amount of 3M Rubberized Undercoating around auxiliary air conditioning lines and seam sealer areas. (Figure 6)

Figure 6 – Article 14-16-NA

10. Allow seam sealer to dry. (May take up to 20 minutes)

11. Perform a pressure test and confirm there is no leak in the rear side of the vehicle.

Pressure Test Procedure

a. Using masking tape, seal the rear air extractors and areas marked in red. Do not need to mask the rear lip molding for vehicle that do not have the rear lip molding removed (Figure 7-8)

Figure 7 – Article 14-16-NA

Figure 8 – Article 14-16-NA

b. Start vehicle, set A/C to fresh air mode and set blower speed to max.

c. Close all doors and ensure windows are fully closed.

d. Use soapy water in a spray bottle to help locate air leaks.

e. Spray around the following areas:
   - ❖ Under body seams
   - ❖ Underbody rubber grommet (Figure 10)
   - ❖ Rear wheel well seams
   - ❖ Rear tail light seams
   - ❖ Rear deck lid seals
   - ❖ Side panel glass seals
   - ❖ License plate area

f. Air leaks can be identified by the presence of air bubbles.

g. Mark all areas identified to have air leaks. Common areas shown below. (Figure 9-12)

Figure 9 – Article 14-16-NA

Figure 10 – Article 14-16-NA

Figure 11 – Article 14-16-NA

Figure 12 – Article 14-16-NA

h. Turn off A/C

i. Turn off vehicle

j. Clean and dry all areas marked earlier

k. Seal using Motorcraft seam sealer

l. Allow sealant to dry and retest (May take up to 20 minutes)

m. Remove the masking tape used in step (a) of the pressure test

12. Spray Wurth Gravel Throw And Underbody Protection over the sealant applied areas for better appearance. (underbody only)

13. Install rear bumper cover. Refer to WSM, Section 501-19.

14. Install the left hand and right hand rear lip moldings. Refer to WSM, Section 501-08. Vehicles built prior to February 1, 2013 replace the wheel lip molding with revised part.

15. Using a suitable exhaust cutting tool, remove the existing tailpipe/tip 5mm (.19 inches) to the rear of the factory weld as shown. Be careful not to cut or damage the exhaust hanger bracket. (Figure 13-14)

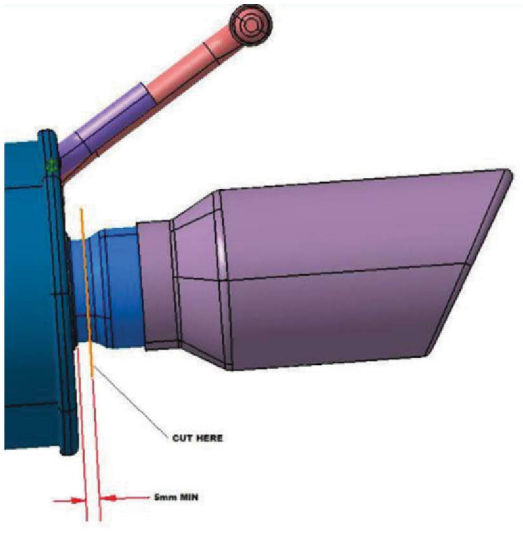

Figure 13 – Article 14-16-NA

Figure 14 – Article 14-16-NA

16. Remove the existing exhaust tip. Grind down enough of the original weld to remove the rest of the exhaust tip that was left over in the muffler. Remove any remaining sharp edges and/or burrs produced during the cutting process. (Figure 15-16).

Figure 15- Article 14-16-NA

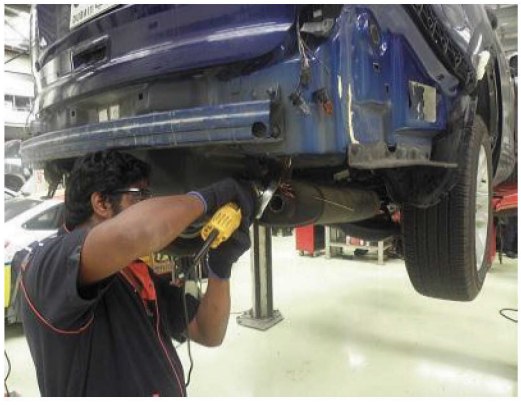

Figure 16 – Article 14-16-NA

17. Reinstall the rear exhaust system.

18. Visually inspect the new tip's relative relationship with the rear bumper fascia to resemble the current product. Make sure to check symmetry between the two tips and bumper before tack welding.

19. Install the new exhaust tip, butt up against the muffler, and tack weld into place. (Figure 17-18)

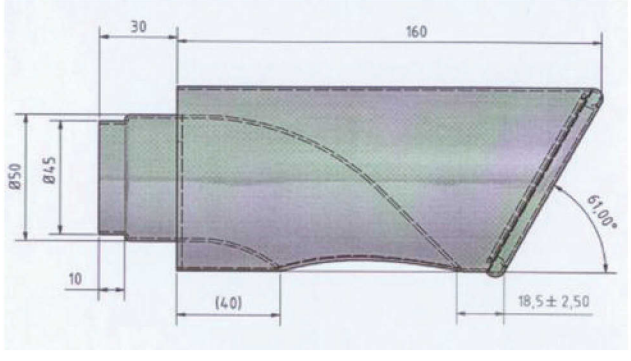

Figure 17 - Article 14-16-NA

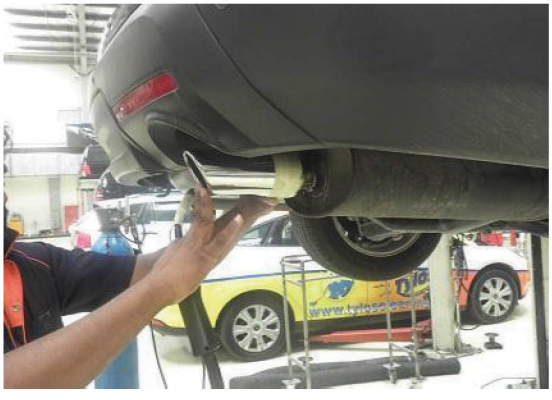

Figure 18 – Article 14-16-NA

20. Once the tips are located properly, finish welding around the entire exhaust-tip joint, and grind smooth the weld. **NOTE:** It will be necessary to drop the exhaust hanger on each side to completely weld the entire diameter. Reinstall back the rear exhaust system. (Figures 19-22)

ALSO MONITOR THE MAF_V PID DURING THE CONCERN.A PROPERLY OPERATING MAF SENSOR SHOULD OPERATE BETWEEN 0.7 AND 0.9 VOLTS AT IDLE AND MORE THAN 4 VOLTS AT WOT. Tom –

I believe I had stepped out briefly in yesterday's 2p Exhaust Quality Meeting when this was discussed. I forwarded your note to the appropriate engineers for their feedback.

- Fusion 5230 (Nowka/Hornby)
- Explorer 5230 (Martelli/Bourgeau)

Thanks.

Subject: Top Exhaust Cold End Issues

Ron, here is a quick look I put together of the top 3 cold end issues in 2015MY, and how we are doing on each one in 2016MY.

- Mustang 5230 – mostly resonator rattle
- Fusion 5230 – mostly the lock seam/crimping issue
- Explorer 5230 – mostly exhaust odor in the cabin

We had a team discussion at today's Exhaust Quality review, and there are a couple questions I'd like to ask:

- On Fusion 5230 I believe there are a small number of post-clean date parts that went to Faurecia for analysis. Have you received any update from Faurecia?
- On Explorer 5230, we are still getting AWS claims binned to 5230 where the verbatim indicates an "odor in the cabin" issue, and the fix includes a service exhaust system with down-turned tips. These claims are often coming from US states in the deep south, that are not currently getting the down-turned tips from the factory. Do you know if there's been any work done on a business case for including selected US states in the down-turned tips action?

If you have questions or need further data on any of these issues just let me know.

Early model numbers are going to be low because they are out of warranty.

Team,

I did not provide the R/1000 data. It came from CCSE. Perhaps Larry Karas or Lokesh Setti can assist.

Larry / Lokesh,

Do we have any U38X WOT Recirc Over-ride Strategy (eliminates odor during WOT event) R/1000 numbers for the IVS business case? Please advise.

Regards,

David Mangham

Hello David,

As you could see in the previous e-mail, the data for R/1000 needs to be confirmed in order to get the Business Case Approved.

The used R/1000 used in the Business Case that went to approval, is the one used for the previous Service Action for MY11-12 U502, and the R/1000 data is the one for the MY11.

Projected Volume	262000
R/1000 @ 0 MIS	0.01
R/1000 @ 3 MIS	0.16
R/1000 @ 6 MIS	0.26
R/1000 @ 9 MIS	0.49
R/1000 @ 12 MIS	1.21

Do you know who can provide R/1000 data for MY12, MY13, MY14 and MY15?, this would help us to compare the behavior for newer model years.

Thanks in advance for your support.

Can you confirm the projected R/1000s, please? It seems too little that there is only one repair per 1000 cars at 12 months.

Subject: U502-U38x HVAC Service Action

Hello Gerardo,

Could you please review this Business Case for a HVAC Service Action requested for MY2011-2015 U502 and MY11-MY14 U38x?

Thanks in advance for your support.

Respectfully,
