Saif,

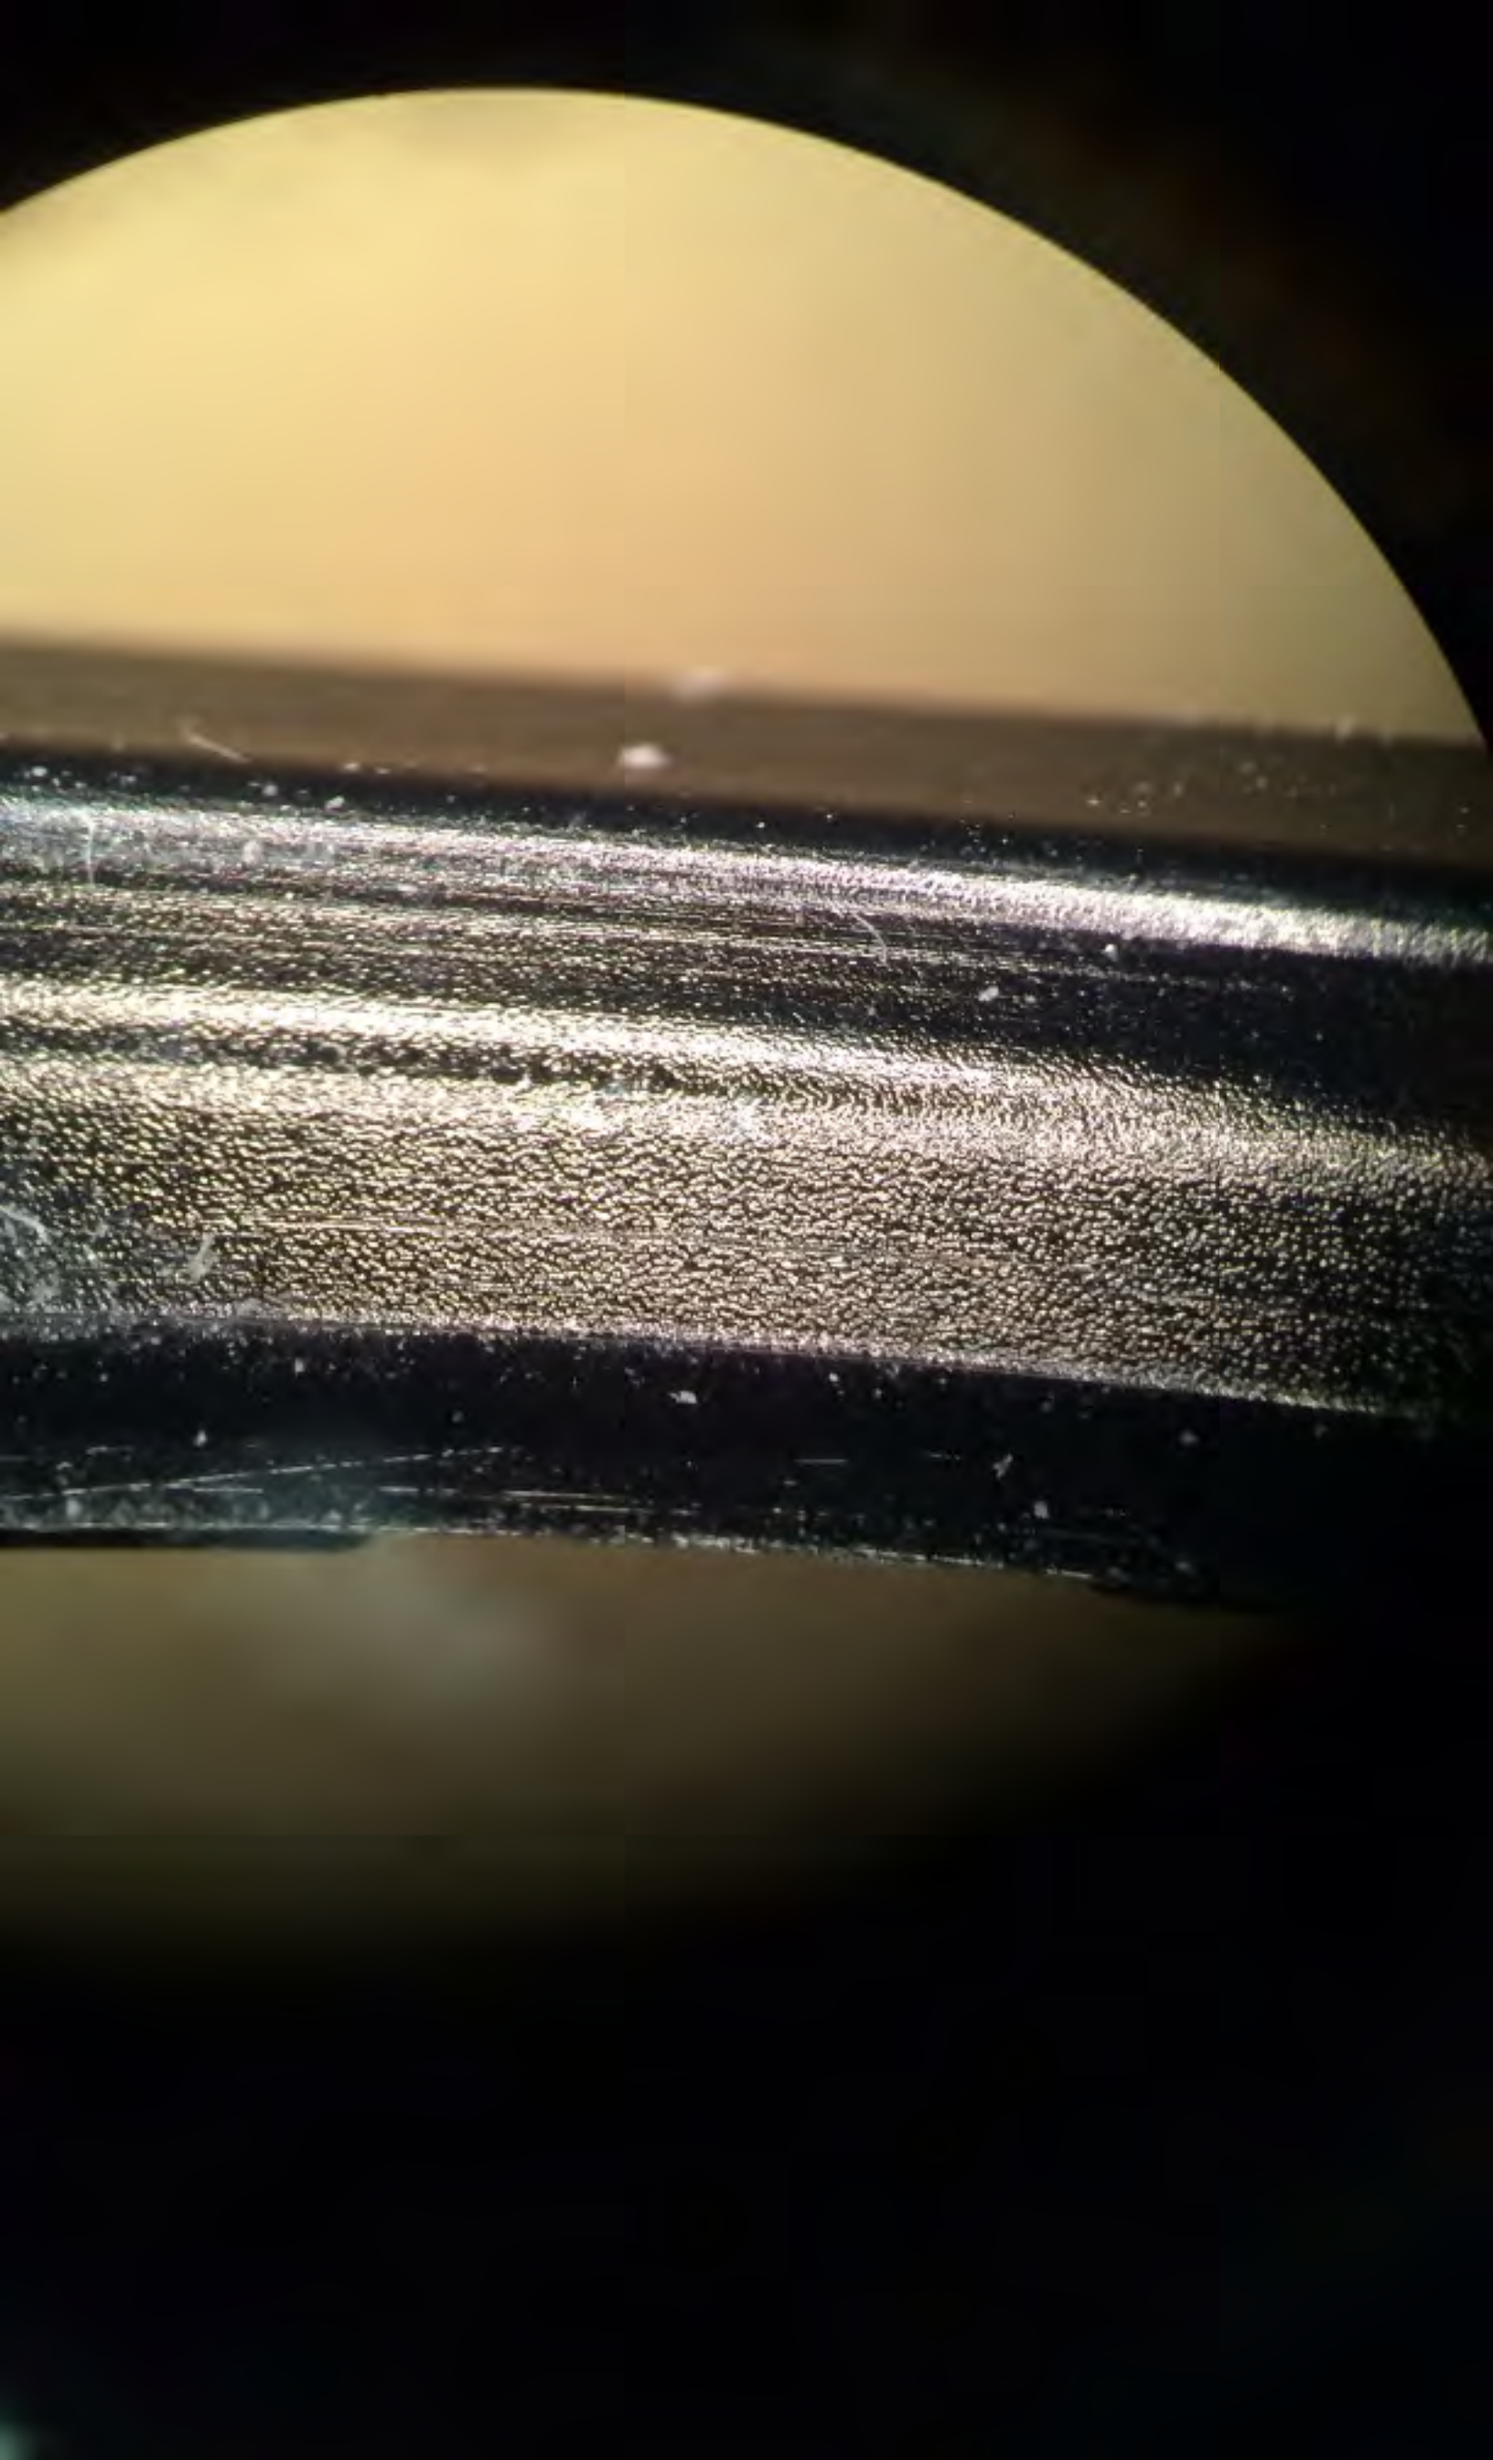

This appears to be a supplier design/process issue. Brakes feel spongy due to internal master cylinder leak.

Thank you,

Subject: 2015-16 F-150/Exp/Nav MC internal failure

Marty,

I've attached the files for the F-150/Expedition/Navigator Master Cylinder internal leak/bypass/failure and also the update to the MC leak to booster for the F-150. Not sure there is much going on with the leak to the booster at this time.

The MC internal failure mode may be of interest. I have not calculated R/1000 at this time (will try to crunch numbers in the morning), but from the volume info Steve sent me, there was 1508 vehicles (F-150/Expedition/Navigator) shipped to Mexico for the 2015 MY, and 2072 shipped there for the 2016MY. There is some increase in volume, but not the equal to the rate of increase of reports. Again, heat/warm weather appears to play a role.

I apologize for the lateness of these files.

2014-16 F-150/Expedition/Navigator Master Cylinder Internal Failure

Search Date: July 22, 2016

Reason for search: FoM brought in a concern regarding the number of F-150 Master Cylinders needing replacement and the parts with the failure mode being pedal to floor/loss of brakes.

Search Criteria:
2014-16 F-150, Expedition/Navigator
US, Canada, and Mexico only
AWS records only
Chassis>Service Brakes>Master Cylinder

Note: an initial search was ran to update the 2013-15 F-150 Leak into Booster data. When it was determined t needed to be looked at separately, I pulled those AWS records out, and expanded the search to includ date of Jan. 8, 2016 which was used for the update. Keywords were used to sort through this data qui records were added to the records pulled out from the initial search.

Keywords used:
internal
fail or failure
bypass or by pass or by-pass
component test

Total Number of Records: 330 Responsive to MC internal leak/bypass/fail

Source: CDR	
Run or Cut/Off Date: 10/06/2016	

Issue Description:
Some subject vehicles may have brake fluid Master Cylinders that may intermittently fail, or by-pass, internally resulting in a long pedal stroke. This may give the customer the perception of a loss of brakes or poor braking performance.

Fred, attached is a Ford internal warranty analysis showing a spike in bypass returns in 2016MY. Oct to Jan production month. Your recent presentation at the FQR did not show internal indicators or warranty to indicate Hitachi was aware of this. This is the source of a CCRG investigation.

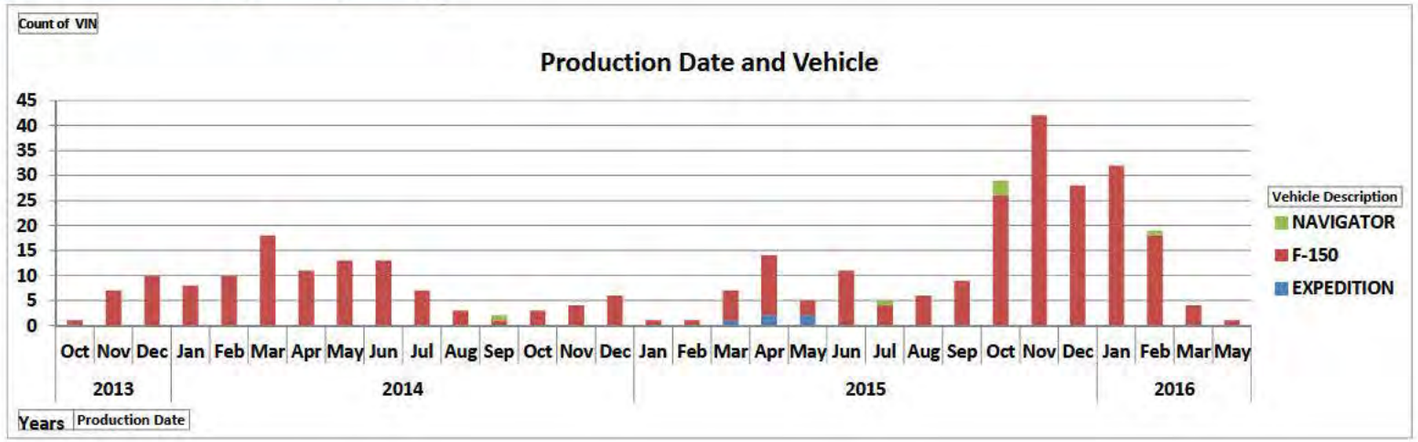

I need Hitachi to dive in and tell me what happened and if it is under control. Review this, and let's get together soon.

Subject: BHWYD or K863G - KSR INTERNATIONAL S DE RL DE CV - Warranty Claim - accelerator pedal - VIN - 1FTEW1CF2G[redacted]

Shawn & Tyler,

Ford Kansas City Assembly Plant has received the warranty claim described below. In an effort to prevent recurrence, please take the steps outlined below. If you have any concerns meeting this request, please contact the undersigned immediately. **In your initial response, document any cross vehicle line/cross Ford plant usage of the suspect component. Please advise if I have the correct site code for Ridgetown.**

Initial Response

When warranty claim is received, prior to part being received

1. **Review claim information.**

- Estimate suspect part manufacturing date based on vehicle Production Date.
- Identify the most likely Failure Mode(s)/ Defect(s).

2. **Walk through the manufacturing process to determine if the Failure Mode/ Defect exists currently or during the suspect time period.**

- Review CR / QR history and your internal process control history to determine if failure mode has been noted in last 90 days.
- If failure mode/defect was already addressed, provide containment or corrective actions taken and dates implemented.
- Ensure current production is defect free. If not, implement incremental containment action and provide applicable marking / identification of clean point.

3. **Review function and effectiveness of process controls.**

- Verify applicable end of line test and upstream process controls and Poke Yokes are, and have been, in place and functioning.
- Run additional test parts ("rabbits") through process to confirm controls.

4. **Make your plant floor personnel aware of the issue (Quality Alert, Visual Aids, Daily Quality Meetings, etc.).**

5. **Have your in-plant rep review the Ford Plant installation and inspection/test processes to understand failure mode detection at the Ford facility.**

6. **Initiate an 8D, at least through D3 (Containment), capturing the above steps. Include the Resident and Site STA Engineers on distribution.**

Updated Response

After part is received/analyzed

1. **If part received and Failure Mode/Defect NOT verified:**

- Review investigation results with the PD/PVT Engineer and coordinate any required next steps.
- Update 8D.

2. **If part received and/or Failure Mode/Defect is verified:**

- Coordinate with IQ to confirm stock certification requirements.
- Complete the 8D.

Thank you for your cooperation.

Subject: Booster/MC repairs

Guys, the below claims are concerning. The first does not say brake light on, reservoir empty or fluid in booster yet they replaced the booster and did a MC/booster swap on a new vehicle to get both parts. This appears to have only needed a MC. If this was not a leak into booster symptom, this is an unnecessary repair to both trucks and must be stopped.

The second describes taking a MC off a new truck to replace a MC that had just been replaced on a different truck. Unless the dealer had two bad MCs within 32 miles on the second truck, they also replaced a MC just to get a "new" MC off a current truck.

Mohammed, please talk to Robin, Dan and Eric and figure out if these dealers changed booster and MC without good cause. If so we need to escalate this within FCSD immediately and get this practice stopped.

BSAQ# 2015372967 - Hitachi Master Cylinder

This issue was discussed on the Chassis P552 VRT Top 20 today. It is unclear if this is a master cylinder NTF BSAQ or something else.

If this is a supplier issue, we need to attach the Hitachi 8D to the BSAQ with their commitment that they are increasing their frequency of checks as stated. We also need to fill in the BSAQ correctly and put PCA in the right place in the system.

There are other BSAQs in the system for Hitachi Master Cylnder leaks/ contamination efforts, if the parts on this BSAQ returned as NTF, the ECBs are not Supplier Process. Please let me know what this is.

Thanks,

Jesica Ruiz

Todd, you asked for Kim Page's warranty analysis today. This is something she sent prior to the meeting. I have not received this morning's file yet today. The attached file contains some of the information reviewed today.

Note, use the excel file TAB names to know what chart you are looking at. Row 1 has the same title in each tab and can be misleading.

I'll send this morning's info when I receive it.
