**Customer's Description of Complaint**

C/S the airbag light comes on and off.

**Technician's Findings and Repair**

The technician was able to confirm the customers complaint. Performed an all systems scan and found codes B1760 and B1650. Tech performed trouble tree diagnosis. The seat was not wet, nor does it show signs of liquid damage. The technician verified the pass airbag warning indicator would not detect a passenger. The technician checked for resistance, power and ground with the air bag test harness installed. He found no abnormal readings, or any loose connections leading to a problem with the wiring. The technician replaced the passenger seat bottom assembly, and tested the airbag system to confirm repairs. The vehicle was returned to the customer in good working order. No freeze frame data available.
