Paula and Karen,

Please check the red text for accuracy. Aside from Philip Durham and Jim Chascsa, are there any other responsible parties that should receive this notice aside from the usual .cc list?

Thanks,

Leah OBrien

==========

Field Service Action Assigned: **Safety Recall 24S06**

Reference: **21-576 (For Recall & Service Programs Dept. Use Only)**

FRC Date: **02-FEBRUARY-2023**

Vehicles Affected: **2018-2020 U553N EXPEDITION; 2018-2020 U554N NAVIGATOR**

Concern Description: **Inadvertent Retractor Pretensioner Deployment**

Supplier Responsible: **YES**

14-D Author: ~~**Edward DeSmet**~~ **Jim Chascsa**

The 14D author, with support from STA, will be responsible for reviewing Prevent Action closure per FAF 03-171 with Philip Durham & Jerry Brown no later than April 02, 2024.

This review will focus on implementation of Prevent Action (Step 13) requiring evidence of incorporation and overall quality of event including systemic root cause and appropriate prevent action selection to capture lessons learned.

Thank you-

Cc: Boehk, Karen (K.S.)
Subject: RE: ASO EMM: Investigation Awareness (21-576) Faulty Retractor / Inadvertent Pretensioner Deployment

Sensitivity: Private

Laura and Nitesh,

I heard in this review that it is possible we may need to recommend an extended warranty program for affected vehicles.

If we are restarting the 14D investigation documentation, we will need to identify a new 14D author – our original author and several team members are no longer with the company.

Subject: RE: Global Critical Concerns Review Group (GCCRG)

Hi team – refer attached a draft of the CCRG presentation that has captured all the detail that the IMG team have on hand.

Can I ask if the FNA team can now work with the LVEA to populate further sections (effect on vehicle, root cause, ICA/PCA, volumes etc).

Also who should be nominated to present at next weeks GCCRG forum?

Many thanks.

Subject: RE: Global Critical Concerns Review Group (GCCRG)

Hi team - Given the late notice I suggest that we deferred to next week. Any other thoughts?

I will put together a draft CCRG presentation and share however I can only provide information surrounding problem description and initial trend analysis findings. Root cause, affect on vehicle and other items will need to be developed by the LVEA ASO /PD team.

Cheers

Hi Paul and Navaneethan,

Are you able to lead a discussion of the U55X pretensioner item you've been working on tomorrow in Global CCRG or would you like it deferred to next week?

Thanks,
Kevin

Hi Kevin,
Are you expecting the topic (attached) to be on the GCCRG agenda for tomorrow or next week? I'm trying to fill in for Enrique while he is out and Chris kindly brought it to my attention.

If so, please let me know GRID ID#, desired 'objective' of the discussion and for how long you'd like this item scheduled. You may have to forward the GCCRG agenda to the necessary participants as well to ensure they plan on joining

Hi Danielle,

I was expecting to see a topic about "U55X Pretensioner Discussion" on Tuesday's agenda, Dave had asked me to support the meeting while he is out of the office.
Would you please inquire / advise? See e-mail attached.

Hello Paula,

Would you please forward tomorrow's TRG meeting to Todd Clark (Sheran Alles's Chief)?

Also I will be sending the updated presentation file to the team shortly. Jim Chascsa will be presenting tomorrow.

Thank you,
Best Regards,
Nitesh

Good catch – he wasn't in GRID. I've added him to the TRG.

Hey Paula-
We might want to add Sheran Alles (salles) also to the list. He is helping with the test methodology to address rootcause.

Best Regards,
Nitesh

Sensitivity: Private

Hello Lauralee,

Can you please postpone this TRG to next week – Jan 25, 2024?

Recognizing 1/25 is Thursday, Truck CCRG will work around the TRG timing.

Thank you,
Best Regards,
(313-805-3467)

-----Original Appointment-----

Monitoring Request - 21-576

Issue	**Issue Title**	2018-2021 U55X Expedition/ Navigator - Faulty Seatbelt Retractor / Inadvertent Pretensioner Deployment	
	Isuse Decription	(1) Airbag light on with Diagnostic Trouble Code B007E-13 & B007F-13. (2) Inadvertent deployment of front seatbelt pretensioners (Driver or Passenger)	
	Sample Responsive Record(s)	Some 2018-2019 Expedition & Navigator vehicles may exhibit the air bag indicator light in the cluster. It stays on all time. Diagnostic Trouble Code (DTC) Retrieved: B007E:13, B007F-13. These DTCs are related to Seat-belt pretensioners (both front driver and passenger seatbelts). There are reports of 7 inadvertent deployment of pretensioners on 2019MY Expedition vehicles citing Air Bag Malfunction Indicator Light On (DTC B007E/F - Driver/Passenger Seatbelt Pretensioner "C" Deployment Control) .	(Please provide sample records indicative of issue)
Monitor Populatio	**Model**	Expedition/ Navigator	
	Model Year(s)	2018-2021MY	
	Population Details	All	(e.g, all; 3.5L GTDI powertrain, etc.)

WEB FORM DATA(119514627) DESCRIPTION OF VEHICLE CONCERN: VEHICLE SEATBELT PRETENSIONER DEPLOYED UNINTENDEDLY. VEHILE HAS NO SIGNS OF DAMAGE ANYWHERE ON IT DO NOT BELIEVE CUSTOMER HIT ANYTHING. CODE B007:13 AS PRETENSIONER IS DEPLOYED PLEASE LIST ANY DIAGNOSTICS ALREADY PERFORMED: INSPECTED WIRING HARNESS FOR ANY SINGNS OF DAMAGE NONE FOUND. ALSO CHECKED FOR SHORT TO GROUND AND RESISTANCES OF BOTH CONNECTORS C303 AND C3066. PREFORMED WIGGLE TEST WITH NO CHANGE ALL READINGS WERE WITHIN SPEC ATTEMPTED TO FOLLOW PPT M HOWEVER SOME STEP WERE NOT DOOABLE AS PRETENSIONER WAS ALREADY DEPLOYED PARTS REPLACED		HELLO ALECZANDER, WITH THE PRETENSIONER DEPLOYING AND THE RCM AND CIRCUITRY PASSING PPT M THAT CAN BE DONE, IT IS SUSPECTED THE PRETENSIONER WAS FAULTED INTERNAL CAUSING IT TO DEPLOY. IF ALL THE STEPS PERFORMED IN PPT M OF 501-20B CLEAR THE RCM AND CIRCUITRY OF FAULT, REPLACE THE DEPLOYED PRETENSIONER, AND VERIFY ALL RCM DTCS CLEAR. IF THEY DO NOT CLEAR, PERFORM THE APPROPRIATE PPT TO DIAGNOSE THE FAULT AND REPAIR IT. AS YOUR DEALERSHIP IS EQUIPPED WITH THE SEE WHAT I SEE (SWIS) HEADSET, IF ADDITIONAL TECHNICAL ASSISTANCE IS REQUIRED AND A SWIS SESSION WOULD BE BENEFICIAL (LIVE VIDEO OR PICTURE WOULD HELP), CLICK <A TARGET _BLANK HREF HTTPS://OUTLOOK.OFFICE365.COM/OWA/CALENDAR/SWISSCHEDULER@FORD.COM	Unintended Deployment
Inspect air bag light on in cluster	Verified customer concern checked visually for any leak, damage or after-market fitment but not found. Checked concern oasis but not found any TSB/SSM related to this concern. Carried out FDRS self-test found DTC B007F-11 Passenger seat belt pretensioner C deployment control. Further inspection followed work shop manual PPT A1 A8 and then followed A11 If the original Dtc retrieved during self-test, YES Recommended to install a new passenger seatbelt retractor. In this case Ford engineering recommendation on the 2018-19MY front seat belt failure NAVIGATOR/EXPEDITION need replace front left and right side seat belt. So we replaced the part M1 FOR 611B08		
CHECK AIRBAG LAMP ON	CHECK FOR AIRBAG LIGHT ON HOOK UP FDRS FOUND DTC B007E:13 B007F:13 :08 CM FOUND DRIVER AND PASSENGER AIRBAG SEAT BELT PRETENSIONER DEPLOYMENT CONTROL CIRCUIT OPEN FOLLOWED PPTEST A1 YES NO A3 NO A6 YES A7 YES AS PER PPTEST FOUND SEAT BELT PRETENSIONER FAULTY DRIVER AND PASSENGER VERIFY REPAIR FOUND OK		DTC
C/S THE AIR BAG LIGHT HAS TURNED ON	VERIFIED THE CUSTOMER`S CONCERN. CHECKED THE OASIS REPORT FOR GENERAL SERVICE BULLETINS, TECHNICAL SERVICE BULLETINS, SPECIAL SERVICE MESSAGES AND VEHICLE SERVICE HISTORY AND FOUND NO DOCUMENTS RELATED TO THE VEHICLES CONCERN. PERFORMED A VISUAL INSPECTION AND FOUND AIR BAG LIGHT IS ON. ACCESSED THE DIAGNOSTIC PORT AND PERFORMED A SCAN USING THE FRDS TO FIND DIAGNOSTIC TROUBLE CODE B007F. PERFORMED PINPOINT TEST A1 YES A2 NO A3 YES A4 YES A11 YES FOUND REFER TO INSTALL A NEW PASSENGER FRONT SEATBELT RETACTOR AND PRETESNTIONER. FOUND THE RIGHT FRONT SEAT BELT RETRACTOR IS THE POINT OF CONCERN. FURTHER EXAMINATION FOUND THE RIGHT FRONT SEAT BELT RETRACTOR INTERNAL OPEN. REMOVED THE B-PILLAR TO GAIN ACCESS TO RIGHT		DTC
Check Air Bag light on	Concern verified Air bag warning on. Found DTC B007F-Passenger seat belt pre tensioner C deploy control. No tsb ssm fsa related concern as per VIN symptom. Also no evident of any external damage or aftermarket modification, Carried out pin point test A1 A2 A3 A6 A7 A11 Replaced Passenger Seat Belt Retractor Concern Rectified.		
CHECK SEAT BELT NOT WORKING PASSENGER SIDE	VERIFIED CONCERN CHECK SEAT BELT NOT WORKING PASSENGER SIDE SEAT BELT IS STUCK CHECK WITH FDRS FOUND DTC B0007 F:13 FOLLOW WSM GO TO PPT A A1 YES,A2 NO 65.35 OHMS,A6 YES,A7 YES,A11 YES INSTALL NEW PASSENGER SEAT BELT THEN CLEAR DTC AND TESTED FOUND OK		DTC

Monitoring Request - 21-576

Issue	**Issue Title**	2018-2021 U55X Expedition/ Navigator - Faulty Seatbelt Retractor / Inadvertent Pretensioner Deployment	
	Isuse Decription	(1) Airbag light on with Diagnostic Trouble Code B007E-13 & B007F-13. (2) Inadvertent deployment of front seatbelt pretensioners (Driver or Passenger)	
	Sample Responsive Record(s)	Some 2018-2019 Expedition & Navigator vehicles may exhibit the air bag indicator light in the cluster. It stays on all time. Diagnostic Trouble Code (DTC) Retrieved: B007E:13, B007F-13. These DTCs are related to Seat-belt pretensioners (both front driver and passenger seatbelts). There are reports of 7 inadvertent deployment of pretensioners on 2019MY Expedition vehicles citing Air Bag Malfunction Indicator Light On (DTC B007E/F - Driver/Passenger Seatbelt Pretensioner "C" Deployment Control) .	(Please provide sample records indicative of issue)
Monitor Populatio	**Model**	Expedition/ Navigator	
	Model Year(s)	2018-2021MY	
	Population Details	All	(e.g, all; 3.5L GTDI powertrain, etc.)
	Records to monitor	All CDR	(e.g. all CDR; VOQ, sig events; allegations of accidents or injury)
	CDR Search Criteria	Selection Summary make: Ford LM; model year: 2022; 2021; 2020; 2019; 2018; vehicle line: EXPEDITION; NAVIGATOR; commodity level1: restraints; commodity level2: seat belts; commodity level3: buckles; drivers; front belts; front left; front passenger; front right; pretensioners; retractors; unknown location; source system key: AP; AW; CQ; CT; CU; DU; FM; GQ; LM; LW; QF; ST; VO; VP; WL; Selections: body - restraints -> Total (x6)	(Alternatively, provide screenshot of CDR search from most recent data refresh)
Timing	**Request Date**	30-Mar-22	
	Most Recent Data Refresh Date	27-Jan-22	
	Requested Monitoring Cadence	weekly	(e.g., monthly; weekly)
Trigger Criteria	**What would you like to be notified of?**	(1) airbag light ON, air bag light ON, (2) B007E, B007F, (3) inadvert, deploy, pretens	(e.g, any responsive records; > 3 VOQs; R/1000 > 5)
Closure Criteria	**When should this item be removed from the monitor list?**	10-Jun-22	(e.g. after 6 months w/ CCRG approval; after action approved in FRC)

Time Frame	**Monitor Period**	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**Monitoring Totals To Date**

Mike,
I had Dinesh contact the dealership regarding these vehicles. The dealership had all the parts except the pretensioner for the Navigator. Since we had limited information, the parts will be returned to WPAC.

I think these were the parts that were routed for return via an expeditor. I don't know which expeditor got the assignment? Can we check with the expeditor to see where we are with these?

We just sorted all of the parts at the WPAC and these are not here. Since they are 2019MY parts they have been excluded from my WPAC requests. Therefore, I will have to ask for them through a hot request. I have sent a separate note to Duane Acha to see if we can get them sent to us.

Hello Jay,

Sorry for late response.

This issue is relatively recent hence it is showing up in the Warranty system. I did check the QED and found the DTC codes related to Seatbelt pretensioner for both the VINs. Attaching the snap-shots of QED for the two VINs.

Also sharing the email-chain when we first came to know of the inadvertent deployments on these two VINs.

Thank you,
Best Regards,
Nitesh

All,
There are currently no claims for said conditions on either vehicle so we will need more details to request the parts returned. We will need the names of the repairing dealerships, the repair order numbers, the part numbers you want returned, the RAC code you want the parts returned to, and a dealer contact if applicable.

Subject: RE: CCRG Grid 21-576: 700 parts return tag - RCM & pretensioner

Hello Jesus/ Jay,

Did we receive the parts (RCM and pretensioner) for this topic yet?

Thank you,
Best Regards,
Nitesh

Subject: CCRG Grid 21-576: 700 parts return tag - RCM & pretensioner

Hello Jay,

There was a pretensioner Inadvertent deployment on below two units in Arizona. We are trying to get the Pretensioner and RCM for these two vehicles.

Can you please help the team to setup the 700 parts return tag to be able to get the RCM from these vehicles? I will appreciate.

1FMJK1MTXKE[redacted] – 2019 Expedition – Driver pretensioner inadvertent deployment
5LMJJ2LT2KE[redacted] – 2019 Navigator – Passenger pretensioner inadvertent deployment

Hello Jesus,
Requesting your support to setup the 700 parts return tag to get the pretensioners. I will appreciate.

Thank you,
Best Regards,

Jesus,

I thought we were going to use the 700-tag part return process through the warranty parts return center. Is that no longer the case?

Hello Jesus,

These parts are at Sanderson Lincoln in Phoenix, AZ. Here is the info I think you need:

Sanderson Lincoln
2121 West Bell Road
Phoenix, AZ 85023
P&A: 10063

Contact: Francisco Herrera
Email: fherrera@sandersonlincoln.com
Phone: (831) 801-2597

Let me know if you need anything else!

Thank you!!!

Gary

Subject: RE: CCRG Grid 21-576: 700 parts return tag - RCM & pretensioner

Hello Shentil kumar,

We have 2 units that we have to return some restraints devices for quality investigation, can you help us to return them?

- VIN
- 1FMJK1MTXKE[redacted]2019 Expedition – Driver pretensioner inadvertent deployment
- 5LMJJ2LT2KE[redacted]– 2019 Navigator – Passenger pretensioner inadvertent deployment

- Repairing dealer name (or dealer P&A code)----TBD
- Service part numbers that you want returned for each VIN
  - Expedition/Navigator RH anchor pretensioner: JL1Z-78610E44-A* (* indicates color)
  - Expedition/Navigator LH anchor pretensioner: JL1Z-78610E45-A* (* indicates color)
  - Expedition RH retractor pretensioner: JL1Z-78611B08-A* (* indicates color)
  - Expedition LH retractor pretensioner: JL1Z-78611B09-A* (* indicates color)
  - Expedition/Navigator RCM: LL1Z-14B321-A
  - Navigator RH retractor pretensioner: JL7Z-78611B08-A* (* indicates color)
  - Navigator LH retractor pretensioner: JL7Z-78611B09-A* (* indicates color)
- Shipping location
  - For ZF - 26 Mile, use RAC code **REST-W2**

Chris, Gary,

Can you help me to know where are the parts and what is the dealer name?

Regards
Jesús

To: Arroyo, Jesus (J.) <JARROY25@ford.com>; Smith, D J (D.J.) <dsmith48@ford.com>
Subject: RE: CCRG Grid 21-576: 700 parts return tag - RCM & pretensioner

Jesus,

I looked up both VINs that you specified below, and neither has a seat belt claim in GSAR yet. If these were very recent repairs, then the dealer may not have processed the claim yet into the warranty system.

If these parts are critical to your investigation, I recommend contacting the warranty part expeditor, who can call the dealer directly to arrange for regular or expedited shipping without relying on the 700 tag process.

Senthil Kumar (csenthi2@ford.com) is the expeditor who handles KTP vehicles.

You will need to provide the following information to the expeditor:

- VIN
- Repairing dealer name (or dealer P&A code)
- Service part numbers that you want returned for each VIN
  - Expedition/Navigator RH anchor pretensioner: JL1Z-78610E44-A* (* indicates color)
  - Expedition/Navigator LH anchor pretensioner: JL1Z-78610E45-A* (* indicates color)
  - Expedition RH retractor pretensioner: JL1Z-78611B08-A* (* indicates color)
  - Expedition LH retractor pretensioner: JL1Z-78611B09-A* (* indicates color)
  - Expedition/Navigator RCM: LL1Z-14B321-A
  - Navigator RH retractor pretensioner: JL7Z-78611B08-A* (* indicates color)
  - Navigator LH retractor pretensioner: JL7Z-78611B09-A* (* indicates color)
- Shipping location
  - For ZF - 26 Mile, use RAC code **REST-W2**

Hi Edwin, D J,

Can you help me to return this parts from NA region to the supplier (ZF),

We will need the both sides of the seatbelt system, passenger and driver, and also the RCM,

Is there something additional that you need from our side?

Regards
Jesús

Subject: Truck CCRG Agenda for Thursday, July 14, 2022

Ford Confidential - Do not forward or distribute

The following items are planned for our upcoming CCRG agenda. The time slots for your respective items are indicated next to your item. Please plan on arriving on time or a few minutes prior to your allotted agenda item if you are following another item on the agenda. We will do our best to stick to these time slots. No need to bring hard copies of your presentation. However, an electronic copy of your ***CCRG Template / Presentation*** should be completed and ***e-mailed to Chris Schop (cschop1) and Dan Stanley (dstanle1)*** to allow for viewing on the overhead projector and to share on web-ex with the larger team. Presentation material should be forwarded by ***4:00pm on Wednesday*** prior to the meeting day. Sample parts or pictures are also incredibly helpful. Please ensure that documents are clearly labeled as ***'DRAFT'*** at top right corner of the page.

Note, to comply with GIS compliance requirements, the CCRG meeting notice has been sent to you in a separate email.

This e-mail transmission, and any documents, files or previous e-mail messages attached to it, contain confidential information and are intended only for the use of the individual or entity named above. Do not read this email if you are not the intended recipient. If you are not the intended recipient, or if the person responsible for delivering it to the intended recipient, you are hereby notified that any disclosure, copying, distribution or use of any of the information contained or attached to this transmission is STRICTLY PROHIBITED. If you have received this transmission in error, please immediately notify the sender by forwarding this e-mail and destroy the original transmission and its attachments without reading or saving in any manner. Thank you.

Subject: FW: Pre-Tensioner Monitoring
Attachments: Monitoring_DTC_IAD_Seatbelt_pretensioners_21-576.xlsx

Good morning Mauricio,

Attaching the latest monitoring document.

21-576 is scheduled to come into CCRG post monitoring phase on Jun 9, 2022 (next week).

- Do we have the test results from the Daicel/ ZF for the tests that were started 3 months back?
- Also any inputs on the inadvertent deployment that occurred last month.

These questions may be asked in the CCRG discussion.

Thank you,
Best Regards,
Nitesh

Subject: RE: Pre-Tensioner Monitoring

Hi Nitesh,

Attached are this week's monitoring results.

Thanks,
Kevin

Monitoring Request - 21-576

Issue	**Issue Title**	2018-2021 U55X Expedition/ Navigator - Faulty Seatbelt Retractor / Inadvertent Pretensioner Deployment	
	Isuse Decription	(1) Airbag light on with Diagnostic Trouble Code B007E-13 & B007F-13. (2) Inadvertent deployment of front seatbelt pretensioners (Driver or Passenger)	
	Sample Responsive Record(s)	Some 2018-2019 Expedition & Navigator vehicles may exhibit the air bag indicator light in the cluster. It stays on all time. Diagnostic Trouble Code (DTC) Retrieved: B007E:13, B007F-13. These DTCs are related to Seat-belt pretensioners (both front driver and passenger seatbelts). There are reports of 7 inadvertent deployment of pretensioners on 2019MY Expedition vehicles citing Air Bag Malfunction Indicator Light On (DTC B007E/F - Driver/Passenger Seatbelt Pretensioner "C" Deployment Control) .	(Please provide sample records indicative of issue)
Monitor Populatio	**Model**	Expedition/ Navigator	
	Model Year(s)	2018-2021MY	
	Population Details	All	(e.g, all; 3.5L GTDI powertrain, etc.)
	Records to monitor	All CDR	(e.g. all CDR; VOQ, sig events; allegations of accidents or injury)
	CDR Search Criteria	Selection Summary make: Ford LM; model year: 2022; 2021; 2020; 2019; 2018; vehicle line: EXPEDITION; NAVIGATOR; commodity level1: restraints; commodity level2: seat belts; commodity level3: buckles; drivers; front belts; front left; front passenger; front right; pretensioners; retractors; unknown location; source system key: AP; AW; CQ; CT; CU; DU; FM; GQ; LM; LW; QF; ST; VO; VP; WL; Selections: body - restraints -> Total (x6)	(Alternatively, provide screenshot of CDR search from most recent data refresh)
Timing	**Request Date**	30-Mar-22	
	Most Recent Data Refresh Date	27-Jan-22	
	Requested Monitoring Cadence	weekly	(e.g., monthly; weekly)
Trigger Criteria	**What would you like to be notified of?**	(1) airbag light ON, air bag light ON, (2) B007E, B007F, (3) inadvert, deploy, pretens	(e.g, any responsive records; > 3 VOQs; R/1000 > 5)
Closure Criteria	**When should this item be removed from the monitor list?**	10-Jun-22	(e.g. after 6 months w/ CCRG approval; after action approved in FRC)

Time Frame	**Monitor Period**	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**Monitoring Totals To Date**

Subject: FW: Early Warning Monitoring - 21-576

Hello Mauricio & Team,

Bringing this to your attention. There was an new inadvertent deployment on passenger side pretensioner for vehicle in Dubai. You may want to request the parts for this seatbelt.

Also there have been a 20 DTC code cases as well.

Thank you,
Best Regards,
Nitesh
(313-805-3467)

Subject: RE: Early Warning Monitoring - 21-576

Hi Nitesh and Dave,

See monitoring results from last week.

Note that the GCQIS record below came in, it reads like a potential inadvertent deployment in Dubai.

Thanks,
Kevin

Subject: Early Warning Monitoring - 21-576

Good morning Kevin,

We had our TRG today on aging investigation from last year related to Expedition/ Navigator Seatbelt pretensioner DTC and Inadvertent Deployment issue.

The topic is being put in Monitoring phase. Adrian requested this be put in early monitoring.

I have filled out the template and would request to monitor on **weekly basis** until Jun 10, 2022.

I appreciate your help.

Thank you,
Best Regards,
Nitesh C. Jadhav

Attachments: Monitoring_DTC_IAD_Seatbelt_pretensioners_21-576.xlsx

Hello Mauricio & Team,

Bringing this to your attention. There was an new inadvertent deployment on passenger side pretensioner for vehicle in Dubai. You may want to request the parts for this seatbelt.

Also there have been a 20 DTC code cases as well.

Thank you,
Best Regards,
Nitesh

Hi Nitesh and Dave,

See monitoring results from last week.

Note that the GCQIS record below came in, it reads like a potential inadvertent deployment in Dubai.

Thanks,
Kevin

Attachments: Monitoring_DTC_IAD_Seatbelt_pretensioners_21-576.xlsx

Hello Team,

Just to keep the team in the loop, there were 13 DTCs between Jan 30, 2022 to Mar 30, 2022. Most are from MEA region, 3 from US.

I have kept a weekly monitoring, so I get the report every Friday.

Best Regards,
Nitesh
(313-805-3467)

Subject: Warranty retractor U55X

Hello team,

In order to follow up the monitoring process for CCRG 21-576, we have reviewed the warranty process with NA and IMG region,

For NA market the blanket is in place, all the vehicles that arrived with concerns in the seatbelt system, the dealers must replace the retractors, ship to supplier (ZF) and replace with new retractors,

For IMG region, we have reviewed with FCSD and they are in the agreement to apply the same methodology as NA region,

So, we have cover both region in order ensure the correct management for warranties,

Regards
Jesús

Subject: RE: Data Projections Review: 2019 Expedition - Faulty Retractor/Inadvertent Pretensioner Deployment (21-576)

Good morning, Monica.

No information was required from STA. The intent was to have Tom Elwell (GDIA) provide a more thorough review of the data projections he created that Nitesh had showed us yesterday.

Based on the review, I requested the team consider as part of the recommendation at next week's TRG to monitor data for vehicles in IMG through the coming summer season.

This concern will be reviewed 3 times next week:

- Monday, 2pm (EDT) – EMM
- Tuesday, 6:30am (EDT) start – specific time TBD – G-CCRG for alignment on recommendation for IMG
- Wednesday, 7:30am (EDT) – Recommendation TRG

Regards,
Paula Rieden Hultman
Critical Concern Engineer

Subject: Declined: Data Projections Review: 2019 Expedition - Faulty Retractor/Inadvertent Pretensioner Deployment (21-576)
When: Thursday, March 24, 2022 8:15 AM-8:40 AM (UTC-05:00) Eastern Time (US & Canada).
Where: [redacted]

I do apologize Paula but I'm just seeing this meeting notice... we are 1 hour behind East time.
Should I provide any information?

Monica

Mauricio – you were in disagreement with the projections yesterday and Nitesh had difficulty explaining the math behind the statistics. If you can break away to listen to Tom Elwell's explanation of the statistics, it would be appreciated.

Subject: CCRG GRID 21-576 - Faulty Seatbelt pretensioner

Hello Dave & Team,

Based on discussion in GCCRG today morning, we may have to align on the recommendation. TRG is scheduled for 3/30.

I propose we bring this into CCRG on 3/24 for 10-15 mins, then in ASO EMM on 3/25.

Is that ok?

Thank you,
Best Regards,

Hello Eric,
Thank you for your support in retrieving the seatbelts from the vehicles. Appreciate it.

Hello Edwin,
We may need your help with the - FedEx Trk # [redacted]
It seems the seatbelt related to this tracking was shipped to Dearborn (possibly WPAC) instead of Exponent at Menlo Park, California.
I will appreciate it.

Best Regards,
Nitesh

Hello Nitesh,
Please check MMP and go to GSJPA to get the contacts for buildings. I will do it this time but going forward this is how you request a shipment from the Depot.

Eric please provide the dealer code

This is how to find out which depot has stock and how to request a ODO.

GISBA to find a building with stock- AF2FA

Hello Adam,
Sharing the document on replacing the seatbelt assembly on the vehicle.

Hello Gregory,
Adam from Oro Ford Dealership in Arizona is helping us with retrieving the seatbelts from 2020MY Expedition.
Can you please provide the service part # for driver and front passenger seatbelt assemblies for the 2020MY Expedition
VIN # 1FMJK1HT6LE[redacted]
I will appreciate it.

Hello Pattie,
Can you please guide Adam on ordering the parts for retrieving seatbelts from the vehicle in Used car lot? I will appreciate it.

Best Regards,
Nitesh

Hello Alex,

I am an Engineer working in Ford Motor Company in Dearborn, Michigan. I am looking for 2018 or 2019 model year Expedition or Navigator in Arizona state for conducting an engineering study related to the driver and front passenger seatbelt pretensioner assemblies. As part of such a study, Ford Motor Company would like to retrieve the driver and front passenger seatbelt assemblies from the vehicle and replace it with the new ones and send the retrieved seatbelt assemblies to a 3rd party research facility in Menlo Park, California.

Can you please let me know if you have 2018 or 2019 model Expedition or Navigator in your Used-Car lot? If yes, please provide me the VIN number for the vehicle.

Please let me know if you can support Ford in such engineering study or if you have any questions. Then I will provide you the instructions to retrieve parts, 3rd party address to send the parts to and the information on charging the parts, labor to support such engineering study.

I will appreciate your help.

Thank you,
Best Regards,

Subject: Early Warning Monitoring - 21-576

Good morning Kevin,

We had our TRG today on aging investigation from last year related to Expedition/ Navigator Seatbelt pretensioner DTC and Inadvertent Deployment issue.

The topic is being put in Monitoring phase. Adrian requested this be put in early monitoring.

I have filled out the template and would request to monitor on **weekly basis** until Jun 10, 2022.

I appreciate your help.

Thank you,
Best Regards,
Nitesh C. Jadhav

WARRANTY DISCLAIMER: ALL PARTS AND ACCESSORIES ARE SOLD AND ALL REPAIRS ARE PERFORMED BY THE DEALERSHIP AS IS. THE DEALERSHIP HEREBY DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING ANY IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, AND NEITHER ASSUMES NOR AUTHORIZES ANY OTHER PERSON TO ASSUME FOR IT ANY LIABILITY IN CONNECTION WITH THE SALE OF PARTS OR ACCESSORIES OR ANY REPAIRS PERFORMED TO THE VEHICLE. THE ONLY WARRANTIES ON PARTS AND ACCESSORIES OR REPAIRS ARE THOSE WHICH MAY BE OFFERED BY THE MANUFACTURER OR DISTRIBUTOR AND ONLY SUCH MANUFACTURER OR DISTRIBUTOR SHALL BE LIABLE FOR PERFORMANCE UNDER SUCH WARRANTIES. CUSTOMER SHALL NOT BE ENTITLED TO RECOVER FROM THE DEALERSHIP ANY CONSEQUENTIAL DAMAGES, DAMAGES TO PROPERTY, DAMAGES FOR LOSS OF USE, LOSS OF TIME, LOSS OF PROFIT OR INCOME, OR ANY OTHER INCIDENTAL DAMAGES.

*SHOP SUPPLY COSTS: We have added a charge equal to 7% of the total cost of labor and parts, not to exceed $60.00, to the Repair Order. This charge represents costs and profits to the motor vehicle repair facility for miscellaneous shop supplies and waste disposal. The State of Florida requires a $1.00 fee to be collected for each new tire sold in the state (s.403.718), and a $1.50 fee to be collected for each new or remanufactured lead-acid battery sold in the state (s.403.7185).

By signing below, you acknowledge that you were notified of and authorized the Dealership to perform the services/repairs itemized in this invoice and that you received (or had the opportunity to inspect) any replaced parts as requested by you. The vehicle is being returned to you in exchange for your payment of the Amount Due.

Section 501.98, Florida Statutes, requires that, at least 30 days before bringing any claim against a motor vehicle dealer for an unfair or deceptive trade practice, a consumer must provide the dealer with a written demand letter stating the name, address, and telephone number of the consumer; the name and address of the dealer; a description of the facts that serve as the basis for the claim; the amount of damages; and copies of any documents in the possession of the consumer which relate to the claim. Such notice must be delivered by the United States Postal Service or by a nationally recognized carrier, return receipt requested, to the address where the subject vehicle was purchased or leased or where the subject transaction occurred, or an address at which the dealer regularly conducts business.

Dealer/Fleet Request For OGC Review

Note: this form is for Retail and Fleet vehicles

Pursuant to the W&P Manual, the service manager is required to complete a Dealer/Fleet Request for OGC Review form if he/she suspects legal action such as, alleged accidents or fires, may be taken. This form includes customer and vehicle information as well as a description of the allegations.

Note: All fields are required and must be filled in accordingly before submitting this form

NOTE: You also have the option of printing this form and then faxing the fully completed form to 313-845-5668 or 313-845-5555

Subject: VIN number 1FMJU1MT6K[redacted]

HI Nitesh,

I guess we received this sample because it came with a RCM, not presented any symptom (DTC code or inadvertent deployment),

I will doble check with Parama,

Regards
Jesús

Subject: RE: CCRG -21-576 Inadvertent Deployment

I found the original note, the vehicle the RCM is coming from is indeed 1FMJU1MT6K[redacted]ve got the retractors because the car was brought in with a DTC, I expect the DTC will be B007xxx, so this is good, the thought is that these two retractors would have high resistance, and perhaps oxidation.

Now I remember why we requested them in the first place.

Hi Jesus,

We have another Expedition with a non-deployment but with DTC. The pre-tensioners have been replace and the RCM, do you want these parts as well?

We can add it to the shipment I have provide the dimensions below which will change now if you need it.

VIN - 1FMJU1MT6K[redacted]
Mileage – 14,479 kms.

Hi Mauricio,

The person requesting the part which is yourself needs to complete the shipping labels and the commercial invoice so our Distributor can ship the parts to you.

The two documents I sent you are examples of what is needed. If you are having issues please contact your FedEx agents locally for assistance, they may have a commercial invoice template they use.

We have had this issue in the past where the FedEx account number does not belong to the company shipping the parts therefore the FedEx is sceptical and request the above to be done.

Regards,

Parama Naidoo

Hi Jesus,

Please see below from the distributor whom is trying to ship the parts.

FedEx needs the bill generated from this account holder. Pls see a sample document we got from the sender to use their account number for shipping a different part. FedEx needs something similar from the account number going to be used for shipping seat belt.

Can you please generate these and send to me.

Regards,

Parama Naidoo

Subject: RE: CCRG Grid 21-576: 2018-2019 Expedition/ Navigator Seatbelt Pretensioner DTC/ IAD

Hi Nitesh,

The enclosed units are mostly Retail, Lease and one Rental. We can discuss more on the call today, but I have reservations looping in the Livery Team (as we discussed) since they only purchase Expedition MAX units and the units below are mostly regular length Expeditions.

I also wanted to let you know I will need to leave the call early as I have an appointment, but I can always circle back with you at a later date.

Thank you!

Have a Great Day!

Kimberly M. Johnston

Subject: CCRG Grid 21-576: 2018-2019 Expedition/ Navigator Seatbelt Pretensioner DTC/ IAD

Hello Kim,

As discussed on the phone, sending a few VINs from Arizona. These vehicles came to the dealership with Airbag Light ON and / OR Diagnostic Trouble code B007E/ 7F and / or inadvertent deployments.

Hello Josh, yes we need 10 pieces of the mgg. Please advise estimated time for receipt to Exponent (after you order it). Thanks,

Ben Yilma

Hi Ben,
Thanks, I will share this document with the supplier and get the parts ordered.

Just to double check, we just need 10 pcs of the MGG, correct?

Thanks,
Joshua Ankrom

Subject: FW: CCRG 21-576: 2018-2022MY Expedition/ Navigator Seatbelt Pretensioner

Hello Josh,
Thank you for coordinating the parts Katie delivered to PDC this morning. Regarding the MGG permit, sorry - it appears that my attempt Friday did not go through (still sitting in draft box).

Attached is Exponent's "License to receive explosive materials" permit requested. Please pass it along to Daicel to ship the MGG (Class-1) directly to Exponent's address below in Arizona.

Attn: John Pye

Exponent
23445 North 19th Avenue
Phoenix, AZ 85027

Please let me know the estimated target timing for Diacel to ship parts and for Exponent to receive it.

Thanks,
Ben Yilma

Subject: CCRG 21-576: 2018-2022MY Expedition/ Navigator Seatbelt Pretensioner

Good morning Benjamin,

As discussed during our last meeting with ZF, sharing the "License to receive explosive materials" file from Subbaiah at Exponent.

Subbaiah has requested that only the Class-1 MGG should go to their Phoenix, Arizona address listed below.

John Pye
Exponent
23445 North 19th Avenue
Phoenix, AZ 85027

The rest of the parts and the vehicle should go to Menlo Park, California address.

Thank you,
Best Regards,

Hello Bill,

I had a discussion with the Engineering team. They have secured a vehicle internally. Hence the vehicle may not be needed at this time.

If anything changes, I will come back to you. Thank you for your support.

Best Regards,
Nitesh

Hello Allen, Bill,

Below are the VINs that meets our criteria –
Lincoln Navigator

Model Year	VIN	Production Date	Sell Dealer State	Sell Dealer City
2019	5LMJJ2TT5K[redacted]	11-Jun-19	AZ	PHOENIX
2019	5LMJJ2LT6K[redacted]	22-Mar-19	AZ	PHOENIX

Model Year	VIN	Production Date	Sell Dealer State	Sell Dealer City
2019	1FMJU1KT6KE[redacted]	11-May-19	FL	ORLANDO
2019	1FMJK1KT2KE[redacted]	26-Oct-18	FL	PENSACOLA

Please let us know is any one of these are available. There may be a need for one vehicle among these four, pending budget discussion.

Thank you,
Best Regards,
Nitesh

Hello Allen,

Thank you for sending this list. I will check the VINs and see which ones fall into our production time window and were sold in Arizona.

I will discuss with Travis in our group about the budget and check if this request can be accommodated if we choose to follow this path. Will get back on Monday

Best Regards,
Nitesh

Hello Matt & Allen,

Adrian asked me to contact you with regards to getting the contact information for vehicles related to lemon law that could potentially be acquired by Ford.

We are seeking 2018/19MY Expedition or Navigator vehicles with the production dates between Sep 01, 2018 to June 30, 2019. Since all trim levels have same seatbelt pretensioners, there is no specific trim series we are focusing on. The vehicles that were sold in hot regions such as Arizona would be of particular interest to the team.

Please let me know who from within Ford I should contact.

Thank you,
Best Regards,

Hello Adrian,

I had discussion with Travis, then learned MWATS tool and conducted few assessments in different ways relative to U55X Seatbelt.

I did not find any trend in the data.

Thank you,
Best Regards,
Nitesh

Subject: RE: CCRG Grid 21-576: 2018-19 U55X Seatbelt Pretensioner

Thanks Nitesh. So as you said, no real trend. The only think I can think of is if there is a particular content that is common in all these vehicles that could give us an indication. That is what the MWATs Analysis might tell us; however, looking at your chart below, it is going to be very unlikely we find something relevant from that analysis.

If Travis can run the MWATs analysis relatively quick, it might still be worthwhile to pursue it as a sanity check (when he is back).

Subject: RE: CCRG Grid 21-576: 2018-19 U55X Seatbelt Pretensioner

Hello Adrian,

Travis is on vacation today and I have setup the MWATS analysis discussion with him for Monday.

In the meantime, I looked at the trim series for the ~25 alleged inadvertent deployment cases for Expedition and Navigators.

Row Label	Black Label	Limited	Platinum	Reserve	Select	XLT	Grand Total
Expedition		2	7			6	15
Navigator	2			6	3		11
Grand Total	**2**	**2**	**7**	**6**	**3**	**6**	**26**

Expedition comes in 3 Trim series – Limited, Platinum & XLT.

Navigator comes in 4 Trim series – Black Label, Select, Reserve & Base.

Thank you,
Best Regards,
Nitesh

Hello Adrian-

I will take look at the trim series to check if there is any trend.

Quite likely, I am expecting no trend since we have Expedition and Navigator with different trims having the DTC/inadvertent deployment symptoms from 2019MY.
But I will confirm this further looking at the warranty data.

Thank you,
Nitesh

Mike,
I had Dinesh contact the dealership regarding these vehicles. The dealership had all the parts except the pretensioner for the Navigator. Since we had limited information, the parts will be returned to WPAC.

I think these were the parts that were routed for return via an expeditor. I don't know which expeditor got the assignment? Can we check with the expeditor to see where we are with these?

We just sorted all of the parts at the WPAC and these are not here. Since they are 2019MY parts they have been excluded from my WPAC requests. Therefore, I will have to ask for them through a hot request. I have sent a separate note to Duane Acha to see if we can get them sent to us.

Hello Jay,

Sorry for late response.

This issue is relatively recent hence it is showing up in the Warranty system. I did check the QED and found the DTC codes related to Seatbelt pretensioner for both the VINs. Attaching the snap-shots of QED for the two VINs.

Also sharing the email-chain when we first came to know of the inadvertent deployments on these two VINs.

Thank you,
Best Regards,
Nitesh

All,
There are currently no claims for said conditions on either vehicle so we will need more details to request the parts returned. We will need the names of the repairing dealerships, the repair order numbers, the part numbers you want returned, the RAC code you want the parts returned to, and a dealer contact if applicable.

Jay: It is likely that the claims have not yet been filed, but the information came to us from another source (e.g. Hotline / GCQIS Report). We need the Dealer P&A, Tech Name, if possible the Dealer RO Number. Could you guys get this info from the dealership and supply to the WPAC Team, along with specific parts you want back?

You can call me by Webex, if you have questions. Kind of old school, but extremely effective.

Importance: High

Hello, Mike, Hope all is well. Since Paul in on vacation this week, I need your help. Looks like this is very urgent. We need to get the RCMs from these 2 vehicles that were repaired under warranty for Inadvertent pretensioner deployment. The seat belt team needs information from these RCM. Could you please help or let me know who I can contact to get these parts back.

Please advise, Thanks.

Erich, Rodrigo: FYI..

Best regards,
Jay Appukutty
Restraints Module & Sensors Supervisor.

Subject: CCRG Grid 21-576: 700 parts return tag - RCM & pretensioner

[redacted]

There was a pretensioner Inadvertent deployment on below two units in Arizona. We are trying to get the Pretensioner and RCM for these two vehicles.

Can you please help the team to setup the 700 parts return tag to be able to get the RCM from these vehicles? I will appreciate.

1FMJK1MTX[redacted] – 2019 Expedition – Driver pretensioner inadvertent deployment
5LMJJ2LT2K[redacted] – 2019 Navigator – Passenger pretensioner inadvertent deployment

Hello Jesus,
Requesting your support to setup the 700 parts return tag to get the pretensioners. I will appreciate.

Thank you,
Best Regards,
Nitesh C. Jadhav

Hello Mauricio,

Sharing with you the chart on annual volume for Expedition I got from VH&C PM. Based on the chart, it seems the overall volume for Expedition is ~ 105,400 units.

Best Regards,
Nitesh

Subject: Seatbelt pretensioners

Hello John & Jody,

I am conducting a foot-print analysis on the 21-576 – Seatbelt pretensioner inadvertent deployment. This is related to 2018 Expedition in MEA regions.

Were there any investigations in the past on Seatbelt pretensioners for inadvertent deployment for any other products?

Would you have the GRID number that I can refer to?

Thank you,
Best Regards,
Nitesh C. Jadhav

Subject: RE: ASO EMM: (21-398) Expedition/Navigator faulty seat belt retractor; (21-576) Expedition inadvertent retractor deployments

Ok, I have the meeting with ZF and Safety today, I will also ask Jeff to be ready for a Monday review with my manager at her EMM, that should get us some updates.

Jesus, please invite Nitesh to all these reviews if we have not done so for a reason.

Subject: 21-398 & 21-576 - Seatbelt Pretensioner

Hello John,

Sending a quick note related to subject topic.

Please keep us in the loop on any new Inadvertent Deployment of seatbelt pretensioners in IMG markets for Expeditions/ Navigators.

I really appreciate it.

Thank you,
Best Regards,
Nitesh C. Jadhav

Hey Mauricio,
I am updating my couples of slides based on input from Adrian highlighted below.
Do you have your slides ready?

Thank you,
Nitesh

Thanks Nitesh. For slide 8, could you use the legal template? Also, could you show some images of the PE that NHTSA issue highlighting why the investigation was closed? I think that will be relevant for the discussion.

Adrian

Hello Adrian & Dave,

Sending the draft version of the presentation we plan to discuss on Wednesday in the Awareness TRG.

Mauricio is working on the workplan that will be added to the deck. He said he will have it ready tonight. I will send his slides merged to the attached deck when I receive it.

Thank you,
Best Regards,
Nitesh

Subject: RE: 21-398 & 21-576 - Seatbelt Pretensioner

Hello Jesus.

13	1FMJU1JT5	[redacted]	1R	20,600	Y		042192	045191	10/18/2021
14	1FMJU1JT2		1R	70,064	Y		023192	056191	10/18/2021
9	1FMJU1JT3		1R		N	OK	51182	O22192	1/24/22
16	1FMJU1JT5		1R		N	OK	434181	434181	1/24/22
17	1FMJU1JT2		1R		N	OK	434181	434181	1/24/22

In your chart, the line 13 & 16 are the same VIN number and same side.
Line 14 and 17 are the same VIN # and same side.
Why are they separate line items? Or is one driver side and other passenger side?

Can you please correct/ clarify?

Thank you,
Best Regards,
Nitesh

Hello Jesus/ Mauricio,

Can you please provide me all the VIN number of vehicles for which we received the parts from IMG? I remember you have an excel chart in a slide.

Your presentation that I have might be old and may not have recently received parts.

I will check the vehicle production dates of these. Just trying to confirm if they all fall in Jan 2019 to May 2019 time window.

Thank you,
Best Regards,

Subject: Expedition Pretensioner Investigations

Team, we currently have two open Expedition Pretensioner CCRG investigations:

- 21-398 pertaining to DTC/MILs
- 21-576 pertaining to inadvertent deployment allegations

Based on investigation to date these two topics appear to be closely related. Because of that, I would like to:

- Consolidate these two topics into 21-576 (i.e. close 21-398 to 21-576) and re-title 21-576 accordingly.
- Kick off the first 8 elements of a 14D to further our investigation into this subject.

Thanks,

David J. Ott

Subject: RE: U55x Pretensioning Retractor Engineering Discussion

Team, there is a meeting that need to lead to help FCSD to refine the service procedure for the P758 SAC FSA. This became priority one after the review with ASO a few moments ago.

The ideal outcome of this meeting is to define the next steps in terms what testing shall we perform to get to the root cause of the IAD cases.

Subject: Expedition Seatbelt Pretensioner

Hello Subbaiah,

I am working through the logistics of sending a single vehicle and few parts (RCMs, deployed/ undeployed pretensioners from the field, virgin pretensioners & MGGs) to Exponent for analysis.

There are few MGGs/ squibs that we are sending from the supplier directly to Exponent. I was told that as MGGs are classified as Class-1, for transportation, it requires special handling.

The supplier asked if the receiving facility (Exponent) has the "License to receive explosive materials". If so, can you please send me the copy? I will then forward to the supplier to initiate the shipping process.

Thank you,
Best Regards,

Subject: RE: Seat Belts Concern for Expedition 2019

Hello Jesus,

Both the cases below are the DTC cases, not the inadvertent deployment cases as mentioned in the email from Victor.

The vehicle 1FMJK1HT[redacted] is part of my list of DTC (473 DTC cases as of Jan 18, 2023).

The vehicle 1FMJK1HT[redacted] was not in my list of DTC.

The investigation is still open. Hence we should send IAD cases to ZF. We are requesting ZF to send those parts they received to 3rd party for testing/ analysis.

Best Regards,
Nitesh

Subject: FW: Seat Belts Concern for Expedition 2019

Hi Nitesh,

There are 2 cases from IMG region, I noted those issues happened last year, however, they are from the same suspect building window, 2019, can you let me know if you have them on your track?

SN	VIN #	PLATE #	KM	WIP#	CUSTOMER CONCERN
1	1FMJK1H[redacted]	[redacted]	50,627	[redacted]	AIR BAG LAMP ON
2	1FMJK1HT[redacted]	[redacted]	37167	[redacted]	AIR BAG LAMP ON

Team,

Will we keep returning to ZF the IAD cases?

Regards

Hello Jesus,

As discussed, on the mail bellow you can see the two VINS marked in yellow, they presented self-deployment condition.

Please let us know if you want us to send them back for further analysis, or any further information required.

Dear Mr. Osman,

Good afternoon.

As per update from our Jeddah Branch, we have now 3 pending vehicles for this seat belt issue with same DTC error.
I already advised them to order the RCM.

Right now, there is only 1 pc available RCM in CPD – 2 pcs will order thru Hotline.

- P/N : FDLL1Z 14B321 A

All vehicles are available in OPL Jeddah W/shop – all waiting for Parts

Subject: RE: Seat Belts Concern for Expedition 2019

Good day Mr. Osman,

Be informed that we have similar case for Seat Belt issue in Western Region – OPL Jeddah & Yanbu.
Do we have an update on this Concern or have feedback on those Old Parts that shipped for investigation.

Plate # 6843 BED (ARAMCO)
Vin # 1FMJK1HT[redacted]
WIP # [redacted]
Mileage : 50,627 KM
Concern : Air Bag light on when we check by FDRS found
1- B007E – driver seatbelt pretensioner 'c' deployment control circuit open
2- B007F - passenger seatbelt pretensioner 'c' deployment control circuit open

Below parts need to replace - under hotline order

1	FDJL1Z 78611B09 AF	SEAT BELT ASY
2	FDJL1Z 78611B09 AF	PRETENSIONER - SEAT BELT RETRA

Also I just have informed that there are other 4 vehicles from our YANBU branch with same concern 2 of them was sent & repair in AL NAGHI Branch under Warranty, and another 2 repaired under Internal - I am now coordinating with our Team to get more details & get copy of the invoice in Al Naghi.

1FMJK1HT5KE[redacted] – repaired in Al Naghi
1FMJK1HT5KE[redacted] – repaired in Al Naghi

Thanks & Best Regards,
Jason

Subject: RE: Seat Belts Concern for Expedition 2019

Greetings Mr. Jason,

Below is a list of VIN's for the concern of the seat belt defective that currently we are investigating. We need to know the date of the vehicles have arrived in market and where they have been stored (inside warehouse or outside under the sun) till it was PDI' and sold. For the first VIN it is an example for UAE was supplied below.

No	Vin	Market	Build Date	Arrival Date	Vehicle Storage
1	1FMJU1MT[redacted]	U.A.E	3/20/2019	3-Jun-19	Vehicle park at Outside parking till 7 Jan 2020
2	1FMJU1JT[redacted]	U.A.E	02/12/2019		
3	1FMJU1JT[redacted]	U.A.E	02/08/2019		
4	1FMJU1JT[redacted]	U.A.E	2/14/2019		
5	1FMJU1JT[redacted]	U.A.E	2/16/2019		

Looking forward to have your usual support and feedback, thank you.

Subject: RE: SEATBELT RETRACTOR

Hi Wayne.

You can create the shipping label and send it to your supplier by using the Create Import feature available on FedEx.com. You can choose to print the labels and send them to your customer as an attachment via e-mail or you can send them directly from the website. If you have any questions you can contact FedEx Tech Support at (877)339-2774 and they should be able to assist.

Mr. Mamoun,

Parts was return by FedEx just now, Due to lack of information from recipient and the documents that required from Saudi customs.

Also, FedEx did not accept Recipient/company account during booking.

They required company sender account number which is [redacted] don't have account in FedEx.

Note:
[redacted] Please advise with regards to this parts and how to handle the required document from [redacted] customs and additional information of the recipient's [redacted] his Mobile/Phone numbers etc.

Thank you.

Kind regards,
Joey

Subject: RE: Seat Belts Concern for Expedition 2019

Hi team,

Following up this concern about seat belt retractor/pretensioner for expedition. I have raised this concern in a safety forum for multiple vehicle lines.

This will be subject to further inspections from engineering.

I wonder if is it possible to get any faulty retractor and pretensioner, so we can send those parts to engineering for further analysis.

I will appreciate if any of you can help me on this request.

Hi team,

This is to inform that I will try to raise this concern in a safety forum. I have foldered this within GCQUIS with folder No.: [redacted]

Unfortunately there are no attachments on the reports in GCQUIS.

@Osman,I will appreciate if by chance you can get some images of the faulty retractor.

Subject: RE: Seat Belts Concern for Expedition 2019

Greetings team,

Just to give you a heads up, we have a concern that was rasied by the dealer today on the Expedition 2019 MY. The concern is related to seat Retractors on the Expedition vehicle line. There are numerous units were affected and the dealer loaded a GCRs (see the attached report) I have a few questions and did ask the dealer the faulty parts to be send to Riyadh for further inspection and ship them if needs be.

Please note, these units are fleet vehicles and they are utilized by Aramco at Dammam on the eastern region of KSA.

Best regards,
Osman Ishaq

Subject: RE: Seat Belts Concern for Expedition 2019

Hi Ejay,

Thanks for bringing this to our attention.

Just a quick question, do you have the faulty seat Retractors with at OPL facilities? if yes, would you please arrange to send them to Riyadh? Also, kindly advise how many units of Expedition 2019 MY vehicle line with Aramco currently? And we need to know if possible were these concerns reported by Aramco on the regular periodic maintenance? And finally, was there any aftermarket accessories installed on these units?

Looking froward to have your feedback, thanks.

WARNING: This message originated outside of Ford Motor Company. Use caution when opening attachments, clicking links, or responding.

Hi Osman,

2019 Expedition multiple vehicles reported with Seat belt pretensioner concern (driver and passenger side), There was DTC code and shows internal open circuit.
Replaced new pretensioner and it is ok. So for 7 vehicles reported and GCR has been submitted (refer the attachments).
This is fleet vehicle working in Aramco project and Aramco raised the safety concern about this problem and requested report.
Need help to find the root cause and formal report which need to be submitted to Aramco.

Regards,
EJay.

Hi Jason,
So for no one reported with this this type of problem, make sure with diagnostics technician that there is no wiring open circuit problem exists for this type failures.
Checked Data logger reading, which one reading is seat belt pretensioner?
Is there and GCR submitted? If yes please send the copy to me. Once all required information available then it will be escalated to ford team attention.

Note: Is there any modification on the vehicle? Any floor mat or carpet done on this vehicles?

Dear Anas /Assem,

As discussed, based on the information I received, there 7 vehicles with seat belt problem. (Dammam -3 units & Abqaiq – 4 units)

4 vehicles - front passenger seat belt problem
3 vehicle - front driver side seat belt problem

In the attached report – it is for the Driver Side Seat belt.

Kindly send me another report for the Passenger Seat Belt inspection.

Hello Jim,

A quick update on one of the request that you made in our earlier meeting related to split between driver and passenger for DTC and alleged IAD.

Diagnostic Trouble Codes (DTC)-
54% are responsive to Driver & B007E – (198 cases)
46% are responsive to Passenger & B007F – (169 cases)

Alleged Inadvertent Deployment (IAD)-
54% are Driver (14 cases)
46% are Passenger (12 cases)

Thank you,
Best Regards,
Nitesh

Subject: FW: Vehicle Late for Return

Do either of you know what vehicle this was and what it was being used for? I know at one point, he had one out for 226 testing and one out for that 55X belt issue.

Thanks,
Michelle Browne

Hello Jim,

Sending the Technician comments/ Customer experience of the 7 Inadvertent deployment cases. Slide # 6 has the video taken by the dealer when the vehicle came to the dealership for repair.

Best Regards,
Nitesh

Customer Experience/ Comments

Inspect for driver seat belt completely stuck.

Technician Comments

- Verified the concern, driver seat belt completely stuck and not possible to retract and airbag warning light on in cluster. Checked and retrieved the dtc b007e:13 no tsb/ssm related to this concern and no external damage and nor aftermarket modification on the vehicle. Further carried out pinpoint test for dtc- b007e:13 a1, a2-
- 65.54 ohm, a3- 65.54ohm, a6- 0.1ohm, in step a7 confirmed that the dtc changes from b007e:13 to b007e:1a and a11- leads to replace driver seatbelt retractor assembly. So replaced the front lhs seat belt assembly and verified the repair.

Airbag warning light remain on in the cluster and customer saw some smoke coming from seat belt area and burning smell was also there. After that the seat belt is not working at all. Stuck in closed position only , not extracting at all .

Technician Comments

- Verified the concern air bag light on all the time. Retrieved DTC B007F-13 , visual inspection not found any abnormalities on the passenger seat belt . Further followed PPT - A , From A1 - Yes,A2 -No , A3 - No, A6- Yes, A7-Yes dtc changed to B007F-1A, then A11- Yes at step A 11 Install a new passenger seat belt retractor includes retractor pretensioner , Replaced passenger seat belt retractor includes retractor pretensioner and verified the repair .
- Noticed drive side seat belt stuck in closed Retract position fully and not able to pull extract as per customer. Customer noticed while sitting in the driver seat and start to move the vehicle some burst kind of noise from the driver seat belt area and also some smoke fumes coming from driver seat belt mount area at the same time burning smell was also there. After that the seat belt is not able to pull and wear extract and not working at all fully stuck in closed position. Visual inspection not found any abnormalities. No any accident history or any modification noticed. Battery voltage Checked found normal.
- Retrieved DTC B007E 13 8B Further followed PPT A From A1 Yes A2 No 65.54 ohms A3 No A6 Yes A7 Yes dtc changed to B007F-1A : 8B then A11- Yes and received the same original dtc then at step A11 need to
- Install a new driver seat belt retractor includes retractor pretensioner and noticed driver side belt pretensioners were deployed as well. As per the hotline assistance replaced RCM also While replacing inspected the all wiring/wiring strain and terminals/terminal fit in the seat belts and RCM connector as well , Not found any abnormalities. While replacing driver seat belt noticed , the seat belt height adjuster mechanism stuck hence replaced as well. HAR 118330743 GCR 2021937773 MT used for diagnosis

Subject: RE: U553 Seatbelt concern

This dealership had another client experience the same problem this past week. Light appeared on dash, client called dealership, in the trip to the dealership the airbag went off. There sure seems to be a problem. I told them to proceed with the same repair we suggested in the past, but don't see any point in them sending the parts in for analysis.

Subject: RE: U553 Seatbelt concern

Hello Gary,

Regarding this concern, I have changed the mail name, it is a seatbelt issue, no airbag,

The last update that I have is that the CCRG team is still working on that, the issue became in a "Project science" due the complexity of the issue, we have not had similar issues in the past, and the team is still working to find a root cause and a ICA,

Nitesh Jadhav is working close in the concern,

Regards
Jesús

Hello Gary,

We are still investigate the issue,

We sent the parts to ZF (seatbelt supplier) for analysis,

We are trying to replicate the failure mode, but we are still working to get the testing parameters,

We will let you know if there is an advance,

Regards
Jesús

Hello Jessica,

PE23-021 005297 ER

We have an Awareness TRG for 2018-2022MY Expedition/ Navigator – Faulty Seatbelt/ Inadvertent Deployment of Pretensioner. This is related to Front row seatbelts only i.e. Driver and Passenger seatbelts.

The TRG is scheduled for Wed at 7.40 am.

- Are there any lawsuits or claims related to this investigation?
- Are there any accident, injury, fire related to this investigation?

Similar investigation on Hyundai Sonata was closed by NHTSA. The Closing ODI resume is attached for reference.

Can you please provide us the response tomorrow? I will really appreciate.

Please let me know if there are any questions related to this investigation.

Thank you,
Best Regards,
Nitesh

Subject: 21-576 - Expedition Seat-belt pretensioner - Ford Shipment to Exponent

Hello Jim & Ed,

I really appreciate the efforts from Benjamin to put together the parts and vehicle that was shipped to Exponent today.

It was quite an effort from Benjamin in freezing cold weather to load/ unload parts from ZF, document contents of all boxes and drop off vehicle/ parts to DST for shipment.

With this shipment, at least for now the ball is in Exponent's court.

Thank you,
Best Regards,
Nitesh

Subject: FW: CCRG Grid 21-576: 2018-19 Expedition/ Navigator Seatbelt Pretensioner

Hello Patrick,

You may have worked with John Fazio in the past to get the BJBs out of the vehicles for his investigation. I am working on the investigation of driver and front passenger seatbelt assemblies.

We are in need of the seatbelt pretensioners from 2018-19MY Expedition/ Navigators for Engineering study that Exponent (research company in California) is conducting for Ford.

Can you please send the list of management lease vehicles for 2018-2019MY Expeditions/ Navigators? I will appreciate.

Thank you,
Best Regards,

Subject: RE: CCRG Grid 21-576: 2018-19 Expedition/ Navigator Seatbelt Pretensioner

Hi Nitesh,

Sorry for the delay, I was at IIHS and didn't see your IM or this email until this morning.

Yes, I worked with the WHQ VSC to obtain a list of management lease vehicles that fell in my population of interest.

I would recommend sending the request to Stubblebine, Patrick (P.W.) pstubbl1@ford.com and his manager Jones, Deanna (D.M.) djone229@ford.com.

Please let me know if you have any questions.
Thank You,

Regards,
John Fazio

Subject: CCRG Grid 21-576: 2018-19 Expedition/ Navigator Seatbelt Pretensioner

Hello John,

We are in need of the seatbelt pretensioners from 2018-19MY Expedition/ Navigators for Engineering study that Exponent is conducting for Ford.

Zach mentioned that you had looked into a list of Management lease vehicles and then reached out to the Ford employees for your BJB project. We are thinking of doing something similar for our CCRG topic.

I will appreciate your quick response.

Thank you,
Best Regards,

Subject: RE: Seat Belts Concern for Expedition 2019

Hi Nitesh,

As per yesterdays confirmation, we may have a couple of faulty parts related to the concern of the seatbelts in MEA region. They presented self-deployment condition.

We can send them for analysis and help on the investigation.

Can you please provide information so we can arrange the shipment of faulty parts? (address, contact name, mail and phone)

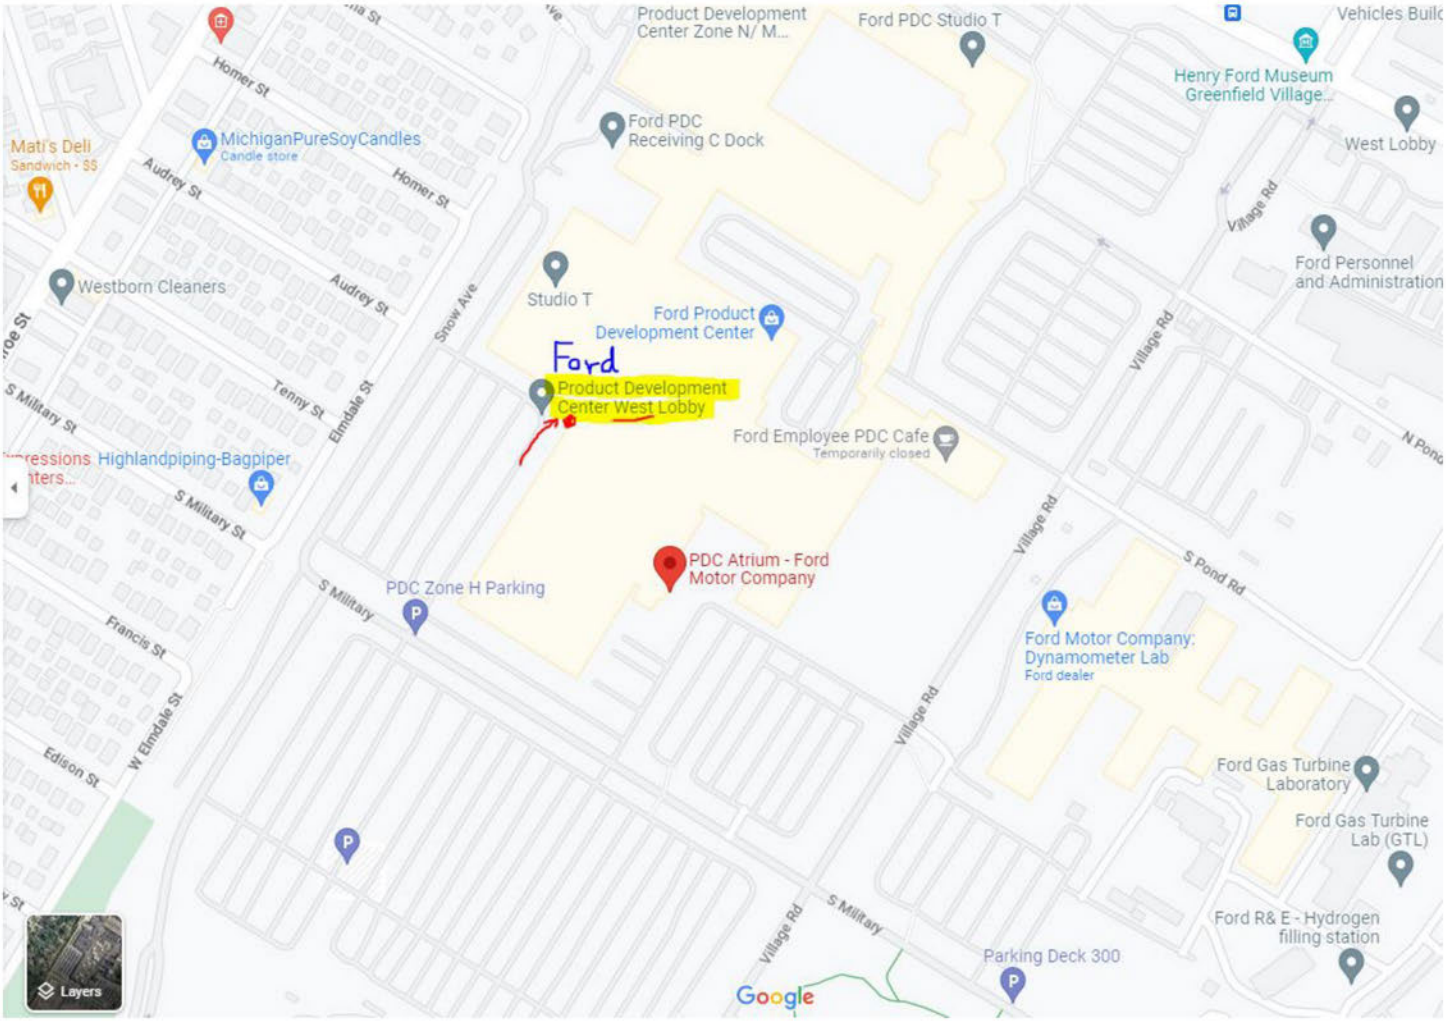
Subject: RE: CCRG Grid 21-576: 2018-2022MY Expedition / Navigator - Seatbelt Pretensioner DTC & IADs

Hello Josh & Aaron,
As discussed, I plan to be at PDC tomorrow, so let's plan to meet up about 10am at the West Lobby entrance. Let me know who specifically will be bringing the parts (name and phone # please).
The official address for PDC is 21000 S Military, Dearborn, MI 48124, but now some navigation tools (i.e. Google maps & WAZE) recognize a direct search using "Ford Product Development Center West Lobby" as a more precise location to the West Lobby.



Thanks,
Ben Yilma

Internal

Hello Ben and team,

As discussed, we have simplified the tracking spread sheet. Please see attached. It now has two tabs, one for deployed and one for non-deployed retractors. This should be easier for everyone to reference for this extra testing. Let us know if you have any questions. One thing to note – for the deployed pretensioners we only have 13 total we can send you. We were tracking 29, but we had included the parts we completely tore down. Those are not usable anymore, so we only have 13 intact deployed parts to send. The undeployed parts are still ok.

Thanks,
Joshua Ankrom

The NASA STI Program Office ... in Profile

Since its founding, NASA has been dedicated to the advancement of aeronautics and space science. The NASA Scientific and Technical Information (STI) Program Office plays a key part in helping NASA maintain this important role.

The NASA STI Program Office is operated by Langley Research Center, the lead center for NASA's scientific and technical information. The NASA STI Program Office provides access to the NASA STI Database, the largest collection of aeronautical and space science STI in the world. The Program Office is also NASA's institutional mechanism for disseminating the results of its research and development activities. These results are published by NASA in the NASA STI Report Series, which includes the following report types:

* TECHNICAL PUBLICATION. Reports of completed research or a major significant phase of research that present the results of NASA programs and include extensive data or theoretical analysis. Includes compilations of significant scientific and technical data and information deemed to be of continuing reference value. NASA counterpart of peer-reviewed formal professional papers, but having less stringent limitations on manuscript length and extent of graphic presentations.

* TECHNICAL MEMORANDUM. Scientific and technical findings that are preliminary or of specialized interest, e.g., quick release reports, working papers, and bibliographies that contain minimal annotation. Does not contain extensive analysis.

* CONTRACTOR REPORT. Scientific and technical findings by NASA-sponsored contractors and grantees.

* CONFERENCE PUBLICATION. Collected papers from scientific and technical conferences, symposia, seminars, or other meetings sponsored or co-sponsored by NASA.

* SPECIAL PUBLICATION. Scientific, technical, or historical information from NASA programs, projects, and missions, often concerned with subjects having substantial public interest.

* TECHNICAL TRANSLATION. English-language translations of foreign scientific and technical material pertinent to NASA's mission.

Specialized services that complement the STI Program Office's diverse offerings include creating custom thesauri, building customized databases, organizing and publishing research results ... even providing videos.

For more information about the NASA STI Program Office, see the following:

Abstract

This paper discusses some of the properties of Viton that are relevant to its use as a pyrotechnic binder in a NASA standard initiator (NSI) propellant. Nearly every aspect of NSI propellant manufacture and use is impacted by the binder system. The effect of Viton's molecular weight on solubility, solution viscosity, glass transition temperature, and strength characteristics as applied to NSI production and performance are reviewed. Emphasis is placed on the Viton fractionation that occurs during the precipitation cycle and its impact on bridgewire functions. Special consideration is given to the production of bridgewire slurry mixtures.

Overview

NSI is a widely used pyrotechnic device that has been around for over 30 years and has been assimilated into many devices and spacecraft. Its function is known in the pyrotechnic world as first fire; this means it translates an electrical stimulus into a pyrotechnic action or train. An NSI primarily produces a flame and hot particles that ignite or initiate other powders; but it can be used for its own pressure impulse if there is sufficient pressure impulse present. The propellant used in the NSI is zirconium. Zirconium is a finely powdered metal fuel that is burned with potassium perchlorate, a finely powdered oxidizer, that is mixed and bound together with a Viton-B rubber binder. Specifics for the composition of the propellant are:

Ingredient	% by weight
Zirconium	52.0
Potassium Perchlorate	42.0
Viton "B"	5.0
Graphite	1.0

Until recently, these ingredients were solely blended by hand. The dry powders were poured into a 45-degree-inclined bowl rotating with a Viton/acetone solution. By using the blender, homogeneity was striven for and the solvent was evaporated down. After this the moist solid was sieved in air by hand through a U.S. Standard screen. This solvent evaporation method has been the only mode of propellant blending for production hardware. While this process produces good propellant, it is labor- and hazard-intensive and it relies on frequent manipulations of the mix to produce a homogeneous Viton binder.

A zirconium/potassium perchlorate (ZPP) mixture can be produced by two basic methods. One allows the blending solvent, which has the rubber in solution, to evaporate from the mix, leaving the rubber behind. This is the evaporation cycle. The other produces a precipitation of rubber particles from the blending solvent onto the active particles and decants liquid from the solid mixture. This is the precipitation cycle.

PE23-021 005373 ER

Precipitation employs two different fluids for blending: a solvent for the rubber (Viton) and a countersolvent fluid that makes the rubber drop from solution. The evaporation cycle uses a single fluid: a solvent for the Viton. The most frequently used solvent for Viton is acetone. Acetone readily dissolves Viton, making a viscous solution to which the active ingredients are added. Once a homogenous mix is attained by mixing, the solvent is allowed to evaporate and coat the particles with a film of Viton. This Viton film, which is the binder for the propellant, can significantly affect the propellant's working response. To get consistent and rapid function times, homogeneity is required throughout the entire blend. To assure homogeneity, the binder must be uniformly distributed throughout the mix. In evaporation blends, where the Viton in solution is wanting to move to an evaporating surface with the solvent, care has to be taken to continuously provide new surfaces while there is solvent left to evaporate. Rubber is deposited at these surfaces when the acetone leaves; and this rubber must be kneaded into the entire blend for uniformity. Since it relies on frequent manual movement of the mix during processing to achieve good blends, the evaporation method requires several hours per blend.

The precipitation blending method relies less on individual blending techniques. The homogeneity of a blend depends more on the mixing apparatus, which can be standardized, and on the standard mixing recipe. The process starts by creating a solution of Viton within acetone, using more solvent than the previous method since evaporation is not a consideration. The solution is placed in a high-speed blender where it is turbulently stirred. While the blender is running, the active ingredients are added and are allowed to mix. When the second fluid or countersolvent is mixed into the spinning mixture, the solution becomes saturated and the Viton begins to precipitate. It comes out of solution using a propellant particle as a nucleus on which to coalesce. The extreme turbulence ensures that all particles are coated with a uniform layer of rubber. Graphite is added into the swirling mass, the countersolvent addition is completed, and the particles are allowed to settle. The clear liquid is decanted off. The wet mix is rinsed with the countersolvent to aid the removal of acetone from the Viton-coated particles and to harden the rubber. The mix is then screened while in a moist or wet state and is separated and dried. Different fluids (including toluene, heptane, hexane, and mixtures thereof) may be used as countersolvents to precipitate Viton from acetone.

Although both blending methods produce excellent propellant, a subtle change in the Viton physics (fractionation) and a seemingly innocuous difference (decanting) between the two methods can significantly affect the firing performance of the propellant, particularly when it is used in a slurry. This difference arises from the Viton binder and its differing properties under various conditions. Because of the pronounced effect of Viton on propellant blending and, particularly, on the slurry process, this investigation was undertaken.

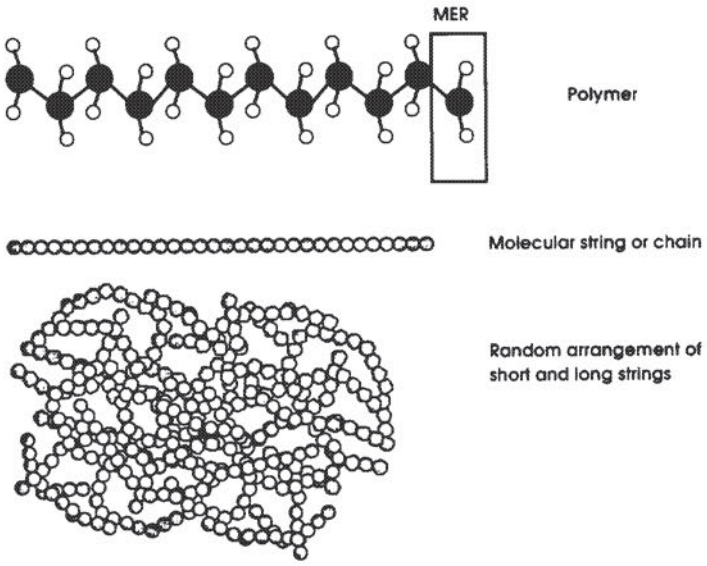
General Description

Viton

Viton, a trademark for a series of fluoroelastomers made by DuPont, is available in several formulations (copolymer, terpolymer) and forms (slab, stick, pellet). Like most synthetic polymers, Viton consists of a mixture of high molecular weight, long chain molecules. Not all of these molecules are the same size, however, a condition known in polymers as "polydispersity" (i.e., consisting of many different molecular weights). Polydispersity influences properties

PE23-021 005374 ER

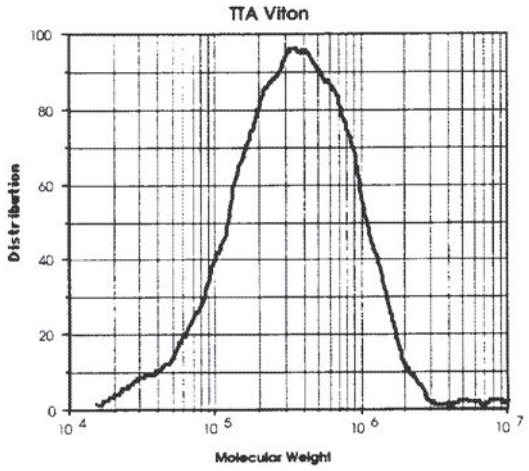
important to propellant manufacturing. The building block of Viton consists of repeating subunits called "mers." Mers can be likened to links in a chain. The more links a chain has, the longer the chain is. During the manufacture of polymers, various factors determine the number of links each molecular string will have in its chain. The end result is a mixture of molecules of differing lengths and molecular weights. Often in polymer production, two or more building blocks are used in a reaction. When two monomers are used, the resulting polymer is termed a "copolymer;" and when three monomers are used, the resulting polymer is called a "terpolymer." A mixture of monomers is used to modify the chemical and physical properties of a polymer.



In Viton, monomers contain mostly carbon and fluorine. Elastomeric (rubber-like) materials of this type are called fluoroelastomers. Fluoroplastics and fluoroelastomers are known for their chemical stability. The stability of Viton over time toward oxidizer components of the propellant is paramount. Viton-A is a copolymer and Viton-B is a terpolymer. Viton-B is a rubber polymer built from molecular sections of three separate molecules—i.e., hexafluoropropylene, vinylidene fluoride, and tetrafluoroethylene—that are arranged to achieve molecules of extended length and a broad band of molecular weights. These different constituents have been blended (kneaded) to achieve a uniform set of physical and mechanical properties. Some formulations have fillers and promoters added to modify their properties. One of these fillers, barium sulfate, which is added as a partitioning agent, is undesirable in NSI blends. Owing to the difficulty of separating barium sulfate from the polymer, Viton should be purchased barium sulfate-free.

The Pyrotechnics Group at Johnson Space Center (JSC) has recently performed analyses on several Viton formulations used to manufacture initiators. One of these, TTA Viton, was bought by JSC for propellant blending work and is currently being used in manufacture. The following curve for TTA Viton clearly shows a Gaussian distribution of molecular weights, ranging from approximately 3,000,000 to 15,000 molecular units.

PE23-021 005375 ER



Molecular weight of polymers

Since molecular weight and chain length significantly affect the solubility, solution viscosity, glass transition temperature, and strength characteristics of polymers, they should be carefully controlled. The polymerization process results in varying molecular weights. Differing weights behave differently. Short chains (molecular weight about 10^2) act like a liquid; medium chains (molecular weight about 10^3) yield greases or waxy solids, and long chains (molecular weight about 10^5) produce solids with varying degrees of flexibility. Solids with weights above 10^5 vary in tackiness and stiffness. The lighter ones are more tacky and more flexible.

Using Viton as a binder in NSI propellant formulations requires controls that go beyond a simple specification of Viton-B. Inattention to binder composition and changes that can be made during propellant manufacture can severely impact the quality of the finished product. Owing to the NSI's long history and the fact that several sources are allowed to manufacture it, Viton from different manufacturing lots has been use in production. An analysis of the various lots of Viton was undertaken to confirm that all users were working with the same basic ingredient. Several laboratory tests and gel permeation chromatography (GPC) were used to characterize the Viton constituents. The average molecular weight (AMW), molecular weight distribution (Pd), approximate manufacturing date, and barium analysis for all Viton-B currently used follows.

Sample	AMW	Pd	Date
Hishear Base Viton	501200	1.63	1965
Pacific Sci Base Viton*	440500	2.70	1992
TTA Base Viton	479000	2.45	1988

*Barium sulfate detected by X-ray fluorescence.

PE23-021 005376 ER

Glass transition temperature of polymers

The glass transition temperature (Tg) is the temperature below which a polymer exhibits properties associated with a glass (brittleness). The glass transition temperature is strongly influenced by molecular weight and the degree of crystallinity of the polymer. In general, as molecular weight increases, glass transition temperature increases. Below the glass transition temperature, the coefficient of volume expansion lessens. Shrinkage and expansion are, thus, lower for a given temperature change. This means that less stress is induced from a given temperature change. It also means that the material is also less resilient to any deformation applied; it is "brittle." Having a high Tg can be used to advantage if flex strength is not as important as thermally induced stress. If flexibility at cold temperatures is required, lower molecular weights are wanted. These effects, which may be vital to the functioning of a bridgewire unit, will be discussed later.

Solubility of Viton

Viton is soluble in low molecular weight ketones and esters. The two most widely used solvents for Viton in NSI manufacture have been acetone and n-butyl acetate. In the blending process, acetone is exclusively used as the solvent; and in the slurry process, n-butyl acetate is used predominantly. Viton shows very low solubility in hexane. Solution of Viton in a solvent is accomplished in two steps. In the first, solvent molecules enter the outermost layers and begin to break the polymer-to-polymer attractions. This produces tremendous swelling of the material as the solvent works its way into the matrix with the formation of a gel layer. These gel layers are often difficult to see under poor lighting conditions. In the second, the gel layer slowly diffuses to form a "true" solution. Agitation of the mixture is useful only in speeding up this second step. Since placing a polymer into solution can take a long time, adequate time should be provided for this to occur. The solution process can be quite slow (days) for materials of very high molecular weight. In general, the higher the molecular weight of the polymer, the longer it will take to dissolve in a given solvent (if it dissolves at all).

In solution, a polymer molecule is a randomly coiling mass, most of whose conformations occupy many times the volume of its segments. The size of a molecular coil is influenced by polymer-solvent interaction forces. In a "good" solvent, where polymer-solvent contacts are highly favored, the coils are relatively extended and strung out. In a "poor" solvent, they are contracted in a tight coil. These conformations influence the solution viscosities that polymers show in different solvents. The speed of solution in a given solvent is influenced by how well the solvent can "stabilize" the charges on the molecule. Solubility is influenced by the polarity of both the solvent and the polymer. It should be stressed that acetone will dissolve Viton faster than n-butyl acetate will, but other factors must be considered in the proper choice of solvent.

Solubility in polymer systems is much more complex than in simpler compounds because of size differences between polymer and solvent molecules, system viscosity, and the effects of the texture and molecular weight of the polymer. It is known, for instance, that the topography of a polymer is critical in determining its solubility. Crosslinked polymers do not dissolve; they swell. Lightly crosslinked rubbers swell extensively in solvents in which unvulcanized material could dissolve; but hard rubbers, such as many thermosetting resins, may not swell appreciably in contact with any solvent. This absence of solubility does not imply crosslinking, however. Other features may give rise to sufficiently high intermolecular forces to prevent solubility.

The presence of crystallinity is a common example. The solubility of a single polymer can radically differ, depending on many different variables, some of which are normally considered as negligible or are overlooked.

Fractionation

Precipitation of Viton from a solvent (acetone) by a non-solvent (hexane) results in what is known as "fractionation" or molecular weight separation. As mentioned before, Viton is a mixture of high molecular weight, long chain molecules. When hexane is added, the fraction which precipitates first is the least soluble; i.e., the heaviest molecular weights present in the Viton. Adding more hexane results in precipitation of successively more soluble constituents: the smaller, lighter molecules. At some critical ratio of hexane-to-acetone, the molecular weight distribution of precipitated Viton closely approximates the molecular weight distribution of the Viton originally placed in the solution. At this ratio, the Viton left in the solution is negligible. Although the precipitated rubber will be reconstituted and have the same molecular species, it will not be well mixed. The original Viton was uniformly homogenous. After precipitation, the Viton has been layered into its different molecular weight components. This subtle difference can cause precipitated propellants to behave differently than those that are prepared by the evaporative method.

The "critical ratio" mentioned above depends on the molecular weight distribution of the Viton used and, to a small extent, on the dilution of Viton in acetone. The use of lower hexane-to-acetone ratios will result in loss of lower molecular weight species to the decant. The loss of these lower molecular weight species effectively increases the average molecular weight of the polymer. This change will affect the properties of the binder in bridgewire slurry operations. For this reason, each manufacturer should determine the "critical ratio" required for their particular Viton lot and solvent system.

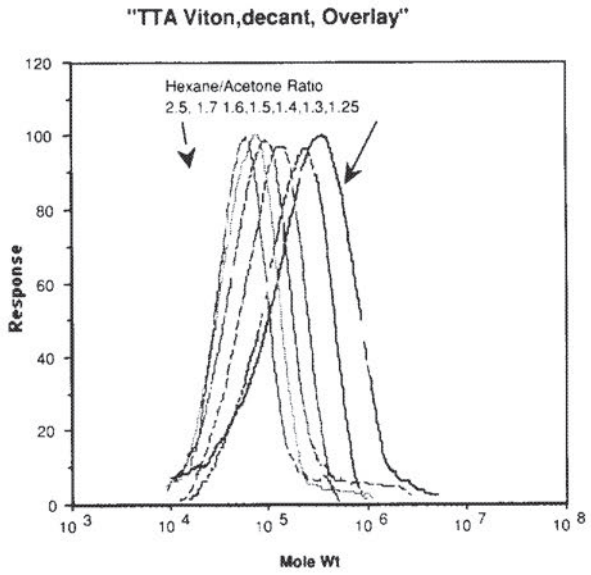
The fractionation effect is well documented in polymer literature. Again, since the solution and the precipitation characteristics of polymers depend upon their molecular weight distribution, the molecular weight distribution should be monitored. Tests performed in the Thermochemical Test Area (TTA) validated that fractionation occurs in the precipitation blending process. The following table shows the AMW and Pd of the polymer lost to the decant at various hexane-to-acetone ratios for the precipitation blending process. This rubber represents a fraction that is no longer available to the propellant.

Sample	AMW	Pd
1.25 ratio	394900	2.37
1.30 ratio	245700	1.46
1.40 ratio	162000	1.30
1.50 ratio	145100	1.10
1.60 ratio	123200	1.08
1.70 ratio – limited sample	89200	1.13

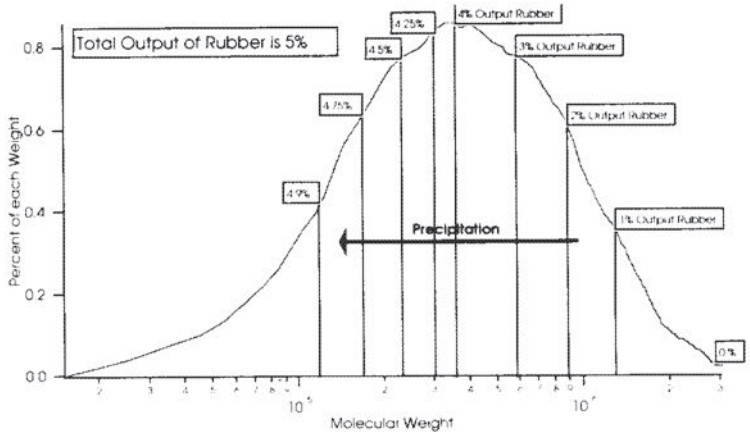
PE23-021 005378 ER

It should be noted that each sample vial contained an equal volume of solution. With increasing ratios, more rubber is precipitated and less rubber is present in the decant. At ratios higher than 1.70, the amount of material left in the decant is so small as to complicate the determination of AMW. These values will vary with the AMW distribution of the starting Viton. An overlay of molecular weight curves for each sample is instructive.

The peaks are moving toward the lighter weights and the bands are narrowing. The 2.5 curve ratio (not listed in the table above) is suspected of being contaminated with the precipitate.



The portion of these samples which had precipitated had molecular weights that decreased with an increasing hexane-to-acetone ratio, since a lighter weight fraction of rubber was being added to that already precipitated. Precipitation begins with the heavy weights and proceeds toward the light weights.



The above curve gives the percentage of each molecular weight within the Viton analyzed. The cumulative percentage of all species represented by the area under the curve is equal to 100%. If this area also represents the total amount of rubber (5%) found in the propellant blend, the curve can be used to predict the percentage of Viton (boxes) found in the output and in its molecular constituents. Starting from the right of the graph, the percent of Viton precipitated and the molecular weight composing that percent are shown.

Propellant blending

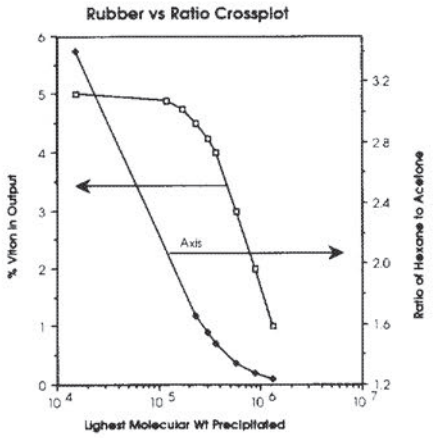
Under the current manufacturing method, finely divided zirconium and potassium perchlorate are added to a solution of Viton in acetone. During mixing, the particles entrapped in Viton are laid down by evaporation or are precipitated by the addition of a countersolvent such as hexane.

If the process used is evaporation, the Viton is liberated at the evaporating surface in much the same molecular weight distribution as the original rubber. The churning and kneading that takes place in mixing guarantees the various molecular weights are homogeneously dispersed. Once the process is complete, the Viton molecular weights are evenly interspersed with each other (just as they started). Dissolution for the slurry afterwards is no different than that which was used to blend the mix. But if a precipitation method by countersolvent is used, the outcome for the slurry dissolution can differ significantly. By the fractionation process, the highest molecular weight components of Viton in the solvent mixture are precipitated first as a co-solvent (hexane) is added. As hexane addition proceeds, progressively smaller molecules are displaced from solution.

If insufficient hexane is added, the original rubber is never recovered from the decant. This causes changes in the way the rubber will respond to the environment. If the amount of hexane added exceeds a certain hexane-to-acetone ratio (determined by the starting polymer's molecular weight), the precipitated Viton will have the same molecular weight distribution as the starting material but will not necessarily have the same starting arrangement. Since each molecular weight precipitates according to solubility when that species became saturated, the different molecular weights are brought down in layers according to their lack of solubility. This is the "M&M effect."

The "M&M effect" occurs when the least rubber soluble surrounds the active particles. The less soluble fraction precipitates first, but it is the last to dissolve if rubber is placed back into a solvent. Fractionation of the constituents and the loss of low molecular weight species to the decant by low hexane-to-acetone ratios compounds this effect. Fractionation, differing molecular species and subsequent rearrangement during precipitation, can affect polymer properties. This fact must be considered when working with polymer solutions. The following curve shows the interrelationship of the molecular weight, the hexane-to-acetone ratio, and the total rubber in an output blend. It also defines the critical ratio needed for total molecular weight recovery.

PE23-021 005380 ER



Slurry process

The propellant slurrying process used on NSI is much like painting. Paint is a mixture of a solvent, the liquid base for the paint; a solute, the material that, when the solvent has evaporated, acts to hold the pigments onto the part; and suspended particles, the pigments that are carried and fixed by the solute. A simple oil-based paint uses a petroleum solvent with a lacquer solute and colored particles for pigment. Other additives are sometimes added to enhance wetting and flow characteristics. The act of painting applies the liquid matrix to the surface of the part. From that time on, Mother Nature does the rest. If a drop is observed, the following occurs.

The drop has a solvent with a solute material evenly dispersed in solution and a suspension of particles more or less evenly dispersed throughout the liquid. Once the drop strikes a surface, several actions begin. The heavier suspended particles begin to settle against the surface while heating from the part raises the vapor pressure of the solvent. Flow currents are set up to allow higher energy molecules to escape (evaporate) from the available free surface. As the solvent molecules leave, the drop surface becomes richer in solute molecules, driving it to saturation and producing precipitation. The drop surface recedes as the quantity of solvent lessens; and, consequently, a thickening of the suspended particles is left behind in the liquid. The solvent molecules continue to move to the surface, which is evaporating; and since the solute is in the solution, it follows the solvent flow to the surface. At the point below the surface where saturation is achieved, the solute begins to precipitate.

Precipitation occurs over a range of depths, depending on saturation conditions and flow forces. The band of solute particles increases in depth and surface layer until they form a film over the entire surface. Evaporation slows owing to diffusion through this film. The film recedes and contracts with the evaporating surface, laying itself in and over all surface irregularities and anchoring itself to the surface of the part when final drying is achieved. This film covers the once suspended particles, which are left behind, holding them to the surface of the part.

The slurry process is identical to painting. A small quantity of propellant blend, ZPP, is mixed with acetone or n-butyl acetate. The quantity of solid material to liquid is important in order to keep the solution unsaturated in solute. The solute for the slurry is Viton-B. When the solution is unsaturated, all of the solute should eventually be taken into solution. This is important in the

PE23-021 005381 ER

evaporation cycle, where it is necessary to achieve a rich (Viton-depleted) zone of ZPP next to the wire. If the ZPP zone next to the wire is not depleted of Viton, energy is used burning rubber off the propellant grains. This causes lengthening of the function time. If insufficient rubber has been removed from the ZPP, the unit may fail to fire.

In the bridgewire slurry operation, the propellant that was previously prepared is re-dissolved in a solvent and is applied to the bridgewire. Some manufacturers dissolve the propellant in acetone and others in n-butyl acetate. Either acetone or n-butyl acetate can be used for slurrying. The vapor pressure (evaporation rate) and solubility rate for each solvent differs. JSC testing has shown that acetone will dissolve Viton considerably faster than will n-butyl acetate. Acetone has a higher vapor pressure, evaporates readily, and is faster to swell and dissolve the Viton. N-butyl acetate has a lower vapor pressure and, as a consequence, evaporates slower. It also dissolves the Viton slower. A slurry process must take these properties into account.

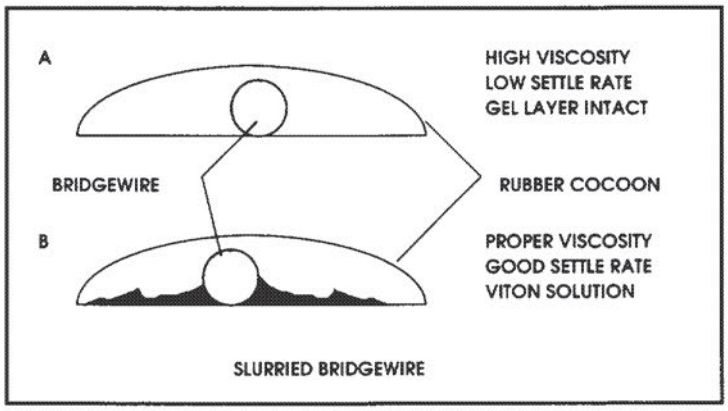
If only acetate is used, the propellant must be exposed longer before all of the Viton goes into solution than if acetone is used. Agitation or stirring of the mixture during this solution process is very helpful in speeding break up of the gel layers. A slower evaporation rates requires less makeup solvent during slurry use to keep the solution unsaturated; a longer working time or pot life is thus achieved. Acetone slurry, by contrast, evaporates readily, requires more makeup, and produces a shorter working time for a drop being placed on the wire. Acetone slurry makeup is, therefore, usually done with acetate; i.e., by mixing both solvents to achieve greater pot life and slower drying time for the drop on the wire. It should be noted that n-butyl acetate is considered a nonionic surfactant that assists in separating suspended particles, keeping them from clumping. As a consequence, when the ratio of acetate-to-acetone exceeds 1.0, the slurry achieves a "silky smooth" texture. Once a drop is placed on the wire, it is important to let it evaporate slowly to achieve good separation of the rubber from the active particles. An air-dry is recommended before the units are heated.

Testing has shown that a binder-free propellant is very active and fast. When the wire is activated, the propellant particles are in intimate contact with the heat source. This permits good thermal contact and a fast progression of ignition of the slurry mix and, then, the main propellant slug. If a binder is used, separation of the propellant particles can occur; therefore, energy transfer during ignition between wire and particles can occur, and slurry to main slug can be delayed due to binder thermal separation.

Slurry experimentation has repeatedly indicated the importance of having active particles settle next to each other around the bridgewire to produce a fast unit. Following is an illustration of the effects that the viscosity of the bridgewire slurry mix can have on the "morphology" of the finished unit. It is believed that drawing "B" depicts the more sensitive unit (all other factors being equal).

In principal, this allows for energy transfer to the active particles by direct wire contact or conduction. This is of particular importance during cryogenic (–420°F firings) operations when alternate heat transfer modes, convection, or radiation have minimal effects. Heat is not wasted in raising the temperature of Viton, but it does go to warm the zirconium and to decompose the perchlorate. The slurry works because the Viton is taken into solution in the solvent and, in the act of drying, the rubber is deposited at the evaporating surface. As the rubber moves away

PE23-021 005382 ER



from the active components, it is establishing a binder-free sediment next to the wire. The absence of Viton between the particles next to the bridgewire favors rapid heat transfer and flame propagation. For this situation to occur, the following conditions are required:

1. ***The molecular makeup of the Viton in the propellant blend*** should be a close match to the original Viton in order to maintain the structural and adhesive properties of the binder. The absence of constituents from the binder changes the published and expected properties of the binder. As stated, low molecular weights influence the flexibility (review glass transition) and adhesion of a binder, and heavy weighs influence structure and viscosity. At no time should solvent be removed from the blending or slurry process when rubber is in solution; this results in a loss of molecular species. Evaporation of solvent is the best way to prevent this. If precipitation blending is used, the critical hexane-to-acetone ratio is important. When thermal cycles and cold temperature vibration are performed, loss of low molecular species has shown itself to be deleterious to the slurry on the bridgewire. Reinforcing the missing Viton with an "add-back" system that uses a fractionated Viton/acetone solution for the slurry bowl has proven remedial.

2. ***The solvent used to make the slurry*** must be able to completely dissolve the Viton from the active particles. Taking the Viton to the gel state is not sufficient, since the surrounding gel layer prevents the close approach of particles to one another. Sufficient time and agitation should be used to promote breakdown of the gel layers. Long soaks (from 2 to 3 days) prior to use will assure that the heaviest molecular weights are in solution. While soaking, moving the particles across each other provides an abrading action that helps to disintegrate the gel layers.

3. ***Slurry mixture viscosity as well as the method and speed of application*** play a crucial role in how the slurry reacts. Viscosity affects not only the separation of a binder from the active particles in the evaporation cycle; it also affects the suspension of active particles in the mix itself. The viscosity of slurry is critical. The less viscous the mix, the faster the suspended particles will settle for a given particle size. The larger the particle, the quicker the particle will settle to the bottom. To trap a good distribution of particles in a slurry drop, either the viscosity must be thick enough or a method of constant mixing and rapid application must

PE23-021 005383 ER

be sought to ensure the particles stay suspended in the liquid for pickup by the slurrying drop. If the slurry mix is not viscous enough, the heavier active particles will not stay in suspension longer and will settle to the bottom, it is unlikely they will be picked up. A thin viscosity mix will usually only carry lighter particles forward. Unless sufficient active particles (i.e., zirconium and perchlorate) are present in the mix, sufficient heat may not be released in the slurry to accelerate the flame into the main mix during testing.

The slurry must be viscous enough to have suspending power to hold the zirconium particles within the liquid while the liquid is being removed and transferred to the bridgewire. However, an overly viscous slurry will impede good rubber migration away from the active components in the drying cycle. If the slurry is too viscous, particles will not settle before the solvent has evaporated and the rubber has hardened; hence, a rubber barrier and slower ignition times will be produced. Here the term "pot life" takes on new meaning.

Pot life provides the time required for suspended particles to settle and for Viton to be carried up and away from the active particles. This provides an insulating cocoon over the bridgewire. Sedimentation of particles in the slurry mixture can be described by Stoke's law. Separation of the zirconium and perchlorate particles during sedimentation may occur under certain circumstances (particle density and size are factors). As the solvent evaporates, the viscosity of the slurry increases as does the time required for the particles to settle.

Slurry mixes with the viscosity of Hershey's chocolate syrup (silky in appearance) or an approximate mix of 2.5 to 3.0 g of ZPP to 1.0cc of solvent when fully in solution. A slurry mass of 2 to 3 mg on the wire gives excellent results. Once applied, this slurry should be left to air-dry undisturbed for 2 hours in order to allow proper separation of the rubber from the active particles. Immediate placement of bridgewire units into an oven to speed the drying process will inhibit the settling of active particles. (Haste makes waste!) Time must be set aside for the particles to settle. The units can be heated for final drying after this.

It is also important to pay attention to the drying process itself. A thin film dries from the outside to the center, with little or no flow in the vertical direction. When the center is drying, the particles are being moved away from each other toward the edge by surface tension; this causes a volume change in the rubber and a bare spot to form in the geometric center. A thick film dries from the edge to the center, but it also dries from top to bottom as well. The flow and surface tension forces carry the smallest, easiest to ignite particles with it. Differing properties mean the heaviest weights will have a strong tendency to solidify first and form a structural tent over the drop. The light weights—owing to their light weights, solubility, adhesion characteristics, and surface tension—will solidify later but will maintain a hold on the active particles the longest and will attach themselves and the particles to the underside of the tent. This process removes particles from the bottom and center, leaving a tunnel or gap in the slurry cocoon.

In-house testing has shown that fractionating the rubber toward lighter molecular weights improves the slurry drying process. Lighter weight species need less solvent to reach the chocolate syrup viscosity range and are more tacky and pliable when solidified. The heavier weights need more solvent because they are bulkier and appear to be more viscous, are harder to maintain in solution, and are more rigid when dried. Because of these differences, there is

PE23-021 005384 ER

more volume contraction on drying with the heavy molecular weight slurry than with a slurry of light weights and significantly more cracking.

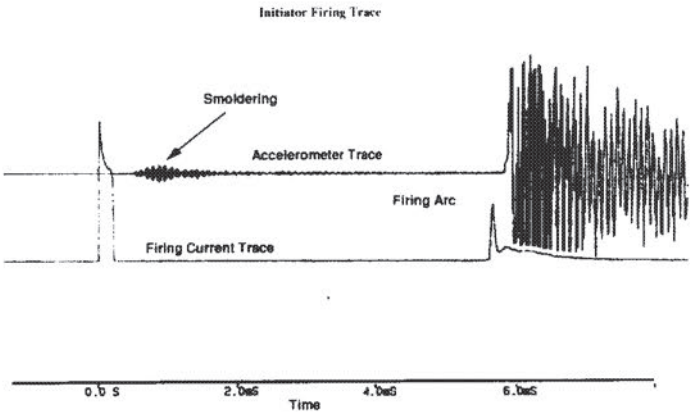
Drop Cocoon

Since the electrical center of bridgewire, which is identical to its geometric center, is the hottest spot and the start of initiation, intimate contact with the smallest particles is desired. But if a gap or a tunnel is present, initiation is stopped or delayed until the larger particles are brought up to temperature. To preclude this, multiple thin layers should be applied. The first drop with a light viscosity needs to flow easily and to wet the entire wire before it is allowed to dry. Drying should occur from the outside to the center, with no separation around the wire. Subsequent drops should have higher viscosity and should be applied over the first wire to add mass and thermal isolation.

4. ***A sufficient load of active particles in the slurry*** must be delivered to the bridgewire. Heavy active particles will settle in the slurry container or dish. Be sure to stir the slurry supply regularly. The dish should be shallow (0.5-inch deep) to allow proper agitation to re-suspend the particles. The slurry drop should be "flowed" or applied onto the bridgewire by means of a toothpick or a small brush. The brush is not recommended since residues from one drop to the next can cause erratic results. A toothpick that can be wiped clean from one unit to the next gives the most consistent results. Remember that viscosity changes due to solvent loss or temperature changes can affect particle uptake.

It is important to note, when testing an initiator, whether the firing current trace shows a low-level reaction (smoldering) occurring prior to ignition of the explosive main mix. If it does, this indicates a slurry problem. Either the zirconium particles have settled in the slurry bowl and are not carried forward to the slurry drop, or insufficient mass has been applied (thin slurry), or the rubber has not been totally removed from the active particles (thick slurry or Viton not in solution). All of this is easy to say but difficult in practice. The production of a fast bridgewire is an art that needs constant attention and practice.

PE23-021 005385 ER



Bridgewire Slurry Addendum

Bridgewire slurry operations are key to the production of NSI hardware. During this operation, a mass of propellant is placed in a solvent to dissolve the binder. The resulting paint-like mixture is used to coat the bridgewire filament. A laboratory study was performed to better understand this process.

Due to the small size of the bridgewire unit and lack of access within the charge cup, a mockup using glass slides on a special microscope stage was used in the laboratory study. Microscope observations revealed crevices and pockets forming next to bridgewire on drying; in some cases, these were large enough to cover the entire bridgewire filament. Several crevices severely reduced heat transfer from the filament to the slurry mass. These defects can be responsible for many "long to fire" or "fail to fire" conditions. The participation of one manufacturer in this study verified that live blends used for slurry operations produce these same type of voids.

Voids are caused by stresses developed in the coating as it dries. After the slurry mixture is applied to the bridgewire, the slurry forms an outer skin which gradually thickens. This outer shell must collapse upon the shrinking drop as solvent leaves the slurry droplet. Under certain conditions, this upper shell may become so rigid that it cannot collapse owing to its increasing viscosity and solids loading. This inability to collapse when the droplets are shrinking places the underlying structure in tension. The amount of stress developed is a function of the solvent volume that is left in the droplet when the upper shell becomes rigid. Depending on the drop's geometry (thickness), sufficient force may develop to lift the "floor" of the drop towards the upper shell, thereby causing voids to occur around the bridgewire. Since this situation cannot be observed from the top of the slurry droplet, it may go unnoticed.

Currently, it is known that the molecular weight of the Viton in a propellant can influence this behavior and that certain measures can be taken to prevent void formation. One such measure is to make the bridgewire slurry less viscous by adding extra solvent to it. When such a slurry is added to the bridgewire, it tends to spread out more and to reduce the thickness of the droplet. The first application must not attempt to provide the necessary slurry mass and should be viewed as a primer. This method works because it reduces the thickness of the droplet and, thus, reduces

PE23-021 005386 ER

the stress (top to bottom) produced in the drying film. Another way of viewing this fix is that insufficient thickness needs to exist in order to form a rigid outer shell. Using this fix requires that subsequent applications be applied atop the first to achieve sufficient slurry mass. Subsequent drops need to be more viscous for mass loading and to prevent resolutionizing the first application.

A second method of reducing voids relies on subtle effects caused by the molecular weight of a binder. In preliminary testing, this method has produced the most void-free slurry droplets observed. It calls for a slight reduction in the molecular weight of the binder used in a slurry. This is achieved by a mini-blend for the slurry of the same ingredients as the main blend with fractionated Viton. Eventually, the blend may include the entire propellant. While this method changes the molecular weight of the binder, it does not change the percentage of binder in the propellant. An explanation of why it works follows.

The viscosity of polymer solvent solutions is strongly influenced by the molecular weight of a polymer in solution, not just its concentration. In general, the higher the molecular weight of a polymer, the more viscous the solution will be. So, if 10 g of heavy molecular weight Viton are added to 200 ml of acetone and 10 g of low molecular weight Viton are added to 200 ml of acetone, the solution made with the high molecular weight Viton will have a higher viscosity.

Viscosity is critical in the bridgewire slurry operation. A slurry that is too thick does not leave the applicator, and a slurry that is too thin drips from the applicator before it can be positioned. As a consequence, most of the manufacturers are working within a viscosity "corridor." The ideal viscosity is achieved by experience. If a mixture is thick, a little more solvent is added. If a mixture is too thin, some of it is allowed to evaporate. What determines how much solvent a slurry must contain is the molecular weight of the Viton in the propellant. If a high molecular weight Viton is used, more solvent is added since solutions made with high molecular weight polymers have an effectively higher viscosity. If a low molecular weight Viton is used, less solvent is added because solutions made with low molecular weight polymers have an effectively lower viscosity.

The impact of these statements becomes apparent when we realize that the stresses developed during slurry droplet drying arise from solvent loss. Slurries made from low molecular weight Viton have less solvent in them (to achieve the right viscosity); i.e., approximately half of that for the heavier molecular weights. They, therefore, have less solvent to lose. Less solvent to lose means lower stresses and fewer dimensional changes during drying. Since lower molecular weight Viton is less likely to form a hard shell incapable of movement during the drying process, it should retain more of its flexibility at low temperatures. By lowering the molecular weight of Viton, it becomes easier (wider corridor) to apply an application of slurry to the bridgewire without cracking.

By applying the methods described here, NSI units have been prepared that function at less than 400 µs with little deviation. Further testing must be conducted to determine what effect a lowering of the overall molecular weight of Viton will have on the propellant as a whole.

This paper discusses some of the properties of Viton that are relevant to its use as a pyrotechnic binder in a NASA standard initiator (NSI) propellant. Nearly every aspect of NSI propellant manufacture and use is impacted by the binder system. The effect of Viton's molecular weight on solubility, solution viscosity, glass transition temperature, and strength characteristics as applied to NSI production and performance are reviewed. Emphasis is placed on the Viton fractionation that occurs during the precipitation cycle and its impact on bridgewire functions. Special consideration is given to the production of bridgewire slurry mixtures.

PREFACE

This paper was motivated by an early 1986 expression of concern about recent problems and failures of flight pyrotechnic hardware by Norman R. Schulze, NASA Headquarters, then Office of the Chief Engineer, and now Office of Safety, Reliability, Maintainability and Quality Assurance. The Langley Research Center (LaRC) was requested to take the lead role in compiling an investigation about the extent of this problem and to explore the technical understanding of the field of pyrotechnic technology. The emphasis on this effort is substantiated by the overall assumption in the design community that pyrotechnics are simple, well-defined and thoroughly understood devices to which we routinely entrust mission-critical as well as safety-of-flight functions. The first action was a May 15, 1986, NASA/DOD survey from Langley entitled, "Solicitation of Interest in a Coordinated Pyrotechnic Technology Effort Among Centers." Two meetings followed, one on November 13 and 14, 1986, at the NASA Langley Research Center, and the other on April 29 and 30, 1987, at the NASA Johnson Space Center, with representatives from each NASA Center, the Air Force Space Division, and the Naval Surface Warfare Center. These representatives are now the nucleus of the NASA/DOD Aerospace Pyrotechnic Systems Steering Committee, whose objective is to provide the NASA and DOD with a policy and posture which will increase the safety, performance, quality and reliability of aerospace pyrotechnic systems.

The NASA/DOD Aerospace Pyrotechnic Systems Steering Committee has been the primary source of information for the compilation of failures presented in this paper, and the members have participated in the data analysis and final review of this report. The thoroughness and traceability of the failures presented herein are not germaine to this study, since only an indication of pyrotechnic problems was sought.

SUMMARY

Although pyrotechnics have successfully served a critical role in accomplishing spacecraft mechanical functions, failures continue to occur. Recent occurrences prompted Norman R. Schulze, NASA Headquarters, to initiate a survey to determine the frequency and cause. This paper describes a survey compiled for a 23-year period which includes 84 serious component or system failures, 12 occurred in flight, with fully developed and qualified hardware. Analyses are presented as to when and where these failures occurred, their technical source or cause, followed by the reasons why and how these kinds of failures continue to occur. The results of these efforts frequently indicated a fundamental lack of understanding of the functional mechanisms of pyrotechnic devices and systems, followed by not recognizing pyrotechnics as an engineering technology, insufficient manpower with "hands-on" experience which has led to a heavy dependence on manufacturers, too few in-house test facilities,

PE23-021 005393 ER

and inadequate guidelines and specifications for design, development, qualification and acceptance. Recommendations are made on both a managerial and technical basis to prevent continued pyrotechnic system failures, increase reliability, improve existing and future designs, and develop the technology to meet future requirements.

INTRODUCTION

Pyrotechnics, as a term used herein, comprise both explosive and propellant-actuated mechanisms, but exclude propulsion. Pyrotechnics have accomplished a large number of the mechanical functions for space missions, including 24 for Apollo, and while extremely high reliability has been demonstrated in both manned and unmanned applications, nagging system failures continue to occur. These failures have caused three deaths and have resulted in considerable expense in redesign, requalification, repeat of system tests, and flight delays, as well as the less definable losses in morale and prestige through experiencing flight failures.

Norman R. Schulze of the Office of Associate Administrator for Safety, Reliability, Maintainability and Quality Assurance, concerned about the short- and long-term management of pyrotechnic failures, recognized that inter-Center coordination could be the most effective approach to defining, understanding, and reducing these failures. The potential benefits of inter-Center coordination were demonstrated by two highly successful programs under his management: the "NASA Aerospace Flight Battery Systems Program" and the "Shuttle/Centaur Super*Zip Separation Joint Failure Analysis and Resolution Program". Reference 1 provides a summary of the battery experience, and reference 2 provides a description of the Super*Zip technical resolution. Both of these programs addressed existing complex problems and failures with multiple causes. A resolution to the Super*Zip failure was achieved in real time with active participation by every NASA Center, as well as the Air Force and Navy and four industrial users, to immediately implement improvements in existing flight systems. The efficient inter-Center coordination resulted in the creation of the NASA/DOD Aerospace Pyrotechnic Systems Steering Committee, composed of leading pyrotechnic technologists from the NASA Centers, the Space Division, Air Force Systems Command, and the Naval Surface Warfare Center (table I).

The need to determine the extent of problems in the pyrotechnic community became the obvious first activity of the steering committee. Each of the committee members supplied failure information and lessons learned to be used for the following specific objectives of this paper:

1. Provide a compilation of pyrotechnic failures, including program impact, sources of failures, and resolutions.

2. Analyze the past failures to determine when they occurred in the use cycle and the basic causes for occurrences.

PE23-021 005394 ER

3. Consider specific pyrotechnic technology deficiencies that allowed failures to occur.

4. Recommend technical and managerial approaches to:

   a. Increase reliability through failure prevention
   b. Provide the theoretical and practical basis for the understanding of pyrotechnic functional mechanisms.
   c. Improve existing designs and provide improved design approaches and specifications as the technology base expands.
   d. Develop the technology to meet future requirements.

PROCEDURES FOR FAILURE SURVEY AND ANALYSIS

This section describes the approach used in conducting the pyrotechnic failure survey and the subsequent analysis to provide direction for the final recommendations.

Survey Approach

The intent of this failure survey was to develop an insight into the extent of the problems in the pyrotechnic discipline, not to gain technical design information on the failures. Furthermore, to expedite the effort and reduce the time commitment by the committee sources (table I) the emphasis was placed on simplicity. Brief statements were requested on failures of hardware that was after design and was in qualification, system testing, lot acceptance testing, in the various phases of preflight preparations, flight, or in long-term storage, service life evaluation. Requested were the year of the failure, a brief description of the failure, the project impact, including the actual and potential if the failure mode had remained undetected, the source of the failure, and the failure resolution. Obviously, the project impact for each failure was an appreciable schedule delay and cost, so only statements of additional impacts beyond these were solicited. The failure source categories and their definitions are listed in table II, including specifications, procedures, quality control, design, technical understanding and misapplications. No requests were made for references or documentation on any of the failures.

Analysis Approach

The failures were grouped into several categories for analysis, then a subjective assessment was made to attempt to explain how and why these

PE23-021 005395 ER

failures occurred. The failures were first categorized into pyrotechnic functions, and then were summed in terms of totals for (a) each functional category, (b) when they occurred in the life cycle of the device, and (c) the source or cause of each failure.

The functional categories were: initiation, defined as the first input into the device to start the functional train; mechanisms, mechanical devices used to accomplish a desired function; separation joints and linear explosives which are a type of device that can be applied in relatively long lengths to sever and release structure, such as rocket staging; and firing circuits, those electrical systems used to provide input energy to initiate pyrotechnic devices.

The "when the failures occurred" categories for devices with completed design were qualification, manufacture of the fully qualified device, lot acceptance testing, systems testing, flight assembly, flight and service life evaluation, or long-term storage. The "source or cause of failures" categories are listed in table II: Specifications, procedures, quality control, design, technical understanding and misapplications. For those failures with more than one failure category, only the primary cause was stated.

A subjective assessment was then made on the "state-of-the-art" of pyrotechnic technology that would explain why these failures occurred. Considered were: (a) recognition by the engineering community of pyrotechnics as a technical entity, (b) guidelines for design, development qualification, and testing, (c) communication, (d) sources of information, (e) reliance on manufacturers, (f) test facilities, (g) manpower, (h) training, (i) standards for requirements and hardware, (j) future requirements and (k) funding.

RESULTS

This section summarizes the results of the failure survey and the analysis of the compiled information.

Survey Compilation

The listing of failures is presented in tables III through VI under the categories of initiation, mechanisms, spacecraft separation joints and linear explosives and firing circuits. To better understand the presentation format, a more detailed description on representative examples for each category is given.

Initiation.- The most infamous pyrotechnic failure was the 1964 Delta program rocket motor ignition at Cape Kennedy that killed three people and injured eight. The filament-wound, fiberglass motor with assembled spacecraft

PE23-021 005396 ER

was mounted in a vertical stand and covered with a protective plastic sheet. In rolling up the edges of the sheet to the top of the assembly to allow access to the spacecraft, thousands of volts of electrostatic energy were generated. These voltages caused an electrical breakdown through the initiation mix between the case and firing leads of an internally mounted squib (electrical initiator). The approach for electrostatic protection at that time was completely wrong. The resolution was to redesign the squib and igniter to reduce electrostatic energy sensitivity, as well as eliminate the possibility of achieving electrostatically generated voltages at sensitive locations.

The 1986 failure of the NASA Standard Initiator (NSI) to function in a -260° F lot acceptance test presents a major impact on a wide variety of spacecraft functions. Should the failure not be resolved, the use of the NSI may be restricted to special firing circuits or for use at warmer temperatures. For example, a dichotomy between operational environment and performance limitation is the Shuttle's hydrogen umbilical disconnect which must function at -420° F. The cause or source of failure is a lack of understanding of the materials and/or manufacturing controls necessary to achieve reliable initiation; test firings in samples of some few lots have all functioned, while the majority of lots have had functional failures. No failures can be tolerated.

Mechanisms.- The 1987 failure of two Magellan pin pullers has far greater potential impact than is initially apparent. This pin puller was the same unit fully qualified for the Viking Lander spacecraft for the 1976 landing on the surface of Mars. After this experience and with its pedigree, two units from a duplicate lot of pin pullers failed to function in a failure mode not recognized in the original design, development and qualification. First, the extremely dynamic pressure impulse output, as designed, of the NSI, when fired into a small eccentrically vented cavity was severely attenuated, reducing the energy available to stroke the piston. Furthermore, the bottom of the cavity was deformed by the pressure into a groove in the piston, which had to stroke to pull the pin. This device may have always been marginal when operated by a single cartridge input.

Spacecraft separation joints and linear explosives.- The 1983 and 1984 cold-temperature failures of the Shuttle/Centaur separation joint were caused by a lack of understanding of how the mechanism works. It was determined that the plates that were to be explosively fractured were too thick and too soft (reference 2). The critical thickness was not at the point of fracture, but at the points where bending occurred to introduce the dynamic stress at the point of fracture. To avoid stress corrosion sensitivity the plate material hardness was changed from earlier systems through annealing from a fracture-sensitive condition to a fracture-resistant condition. Although the joint was successfully severed in early demonstration tests despite this soft condition, a significant portion of the functional margin had been lost without the knowledge of system designers.

Firing circuits.- The 1987 launch pad lightning strike ignition of three of four sounding rockets was caused by electromagnetically induced energy in partially shielded and grounded firing leads. Facility hardware and procedures

PE23-021 005397 ER

had been used successfully for over 30 years of launch operations. An unusual storm with sudden lightning identified the system weaknesses.

DATA ANALYSIS

This section describes the results of the failure survey in quantitative terms and provides a subjective assessment to help explain why the failures occurred.

Quantitative summary.- The total number of failures reported in this survey was 84. The frequency of occurrence for the 23-year period is shown in figure 1. The greatest number of failures occurred in 1984 with an average of 3.65 for the entire period. The flight failures are scattered throughout the period. The number of failures in each functional category is shown in figure 2. The number of failures in a device life cycle is shown in figure 3. Of course, the key statistic is that 12 flight failures occurred following qualification, lot acceptance testing, systems test and flight assembly. Figure 4 summarizes the pyrotechnic failure occurrences in terms of sources or causes.

Assessment on reasons for failures.- This section is a compilation of "state-of-the-art" opinions by the NASA/DOD Pyrotechnic Steering Committee as to how and why these failures occurred. These opinions are subdivided and presented in the following categories: pyrotechnic technology recognition, guidelines for design, development and qualification, communication, sources of information, reliance on manufacturers, test facilities, manpower, training, standards for requirements and hardware, future requirements and funding.

Pyrotechnic technology recognition.- Pyrotechnics have not been recognized as a separate and distinct technology, but have been relegated to a subsystem level of propulsion or structures. Even worse, pyrotechnic devices are considered analogous to "nuts and bolts", in that no fundamental engineering design is necessary; they need only be purchased and applied. Past edicts have shown the general opinion and the concern for pyrotechnic use, one of the more recent being, "Pyrotechnic applications are prohibited for both the Shuttle vehicle and Shuttle payloads." Other messages range from "Don't consider them, unless you have to," to "squibs are pretty reliable." Program managers generally have little background experience with pyrotechnic systems, or have heard horror stories of unexplained failures, and realizing the scarcity of experienced personnel, have avoided their use. In spite of these negative opinions, pyrotechnics do have their place in design applications for singular, non-repetitive functions that demand enormous amounts of directed energy in short periods of time.

Guidelines for design, development and qualification.- No standardized guidelines exist within NASA for pyrotechnic system design, development and qualification, as does the Air Force (reference 3). Development borders on

PE23-021 005398 ER

magic and superstition. Subsequent failures leave the impression that pyrotechnics are dangerous, damaging, and at best, difficult to control. Some past pyrotechnic subsystem managers have actually conveyed to their program managers that no one can really understand how these devices work; they don't follow any known engineering laws. Since pyrotechnics are single-shot devices, past approaches for demonstrating reliability have relied heavily on developing a statistical verification without a clear understanding of functional mechanisms and the relative importance of system parameters. That is, once a successful performance was achieved, emphasis was placed on accomplishing large numbers of consecutive successes. (More than 2000 units are needed to establish a 99.99 percent reliability at a 95 percent confidence level.) However, the current approach often is to run full-scale systems tests on as few as six assemblies or less with no statistical guarantee of reliability, and without an adequate understanding of how the mechanisms function, a prescription for disaster.

Communication.- Most Centers work their pyrotechnic efforts independently with little intercommunication, cooperation or sharing of technical gains, problems, failures and resolutions. There has been little mutual participation among Centers in design reviews.

Sources of information.- No library or central source of information exists that is remotely oriented towards current aerospace pyrotechnic technology, particularly a databank on past failures. The failure survey in this paper was compiled primarily informally, on the basis of memory of the Steering Committee members. Few publications exist in this highly specialized area. Few programs thoroughly document and publish designs, functional performance and physical envelopes, particularly in a format permitting trade studies needed for new designs. The best pyrotechnic technology is in the minds of a handful of specialists with sufficient general experience to assess new applications.

Reliance on manufacturers.- Many Government or prime-contractor pyrotechnic managers do not have technical backgrounds to work on an equal basis with pyrotechnic manufacturers. This situation has led to the manufacturers educating the customer on the attributes of pyrotechnic applications, followed by the manufacturer being thrust into making a proposal without a reasonable understanding of system requirements. This approach results in a customer who is now largely dependent on the manufacturer for development of key pyrotechnic components without a clear definition on system interfacing. Also, the manufacturer should not be relied upon to investigate and resolve hardware failures with complete objectivity because of his vested interest. Finally, it is not reasonable to expect manufacturers to accomplish research and development to meet future requirements without considerable participation by the Government or prime contractor.

Test facilities.- The NASA and Air Force have very few test facilities that are designed for conducting pyrotechnic research, development and demonstration. Of the few facilities that exist, virtually all have to be reactivated and staffed on demand. This situation not only decreases the depth of understanding of personnel attempting to stay abreast and advance the state-of-the-art, but again forces reliance on the manufacturers.

PE23-021 005399 ER

Manpower.- Pyrotechnic personnel are generally transient, assigned or hired for a temporary effort on a specific program, and not encouraged to stay in the profession. Actually, many pyrotechnic staffs, including those in the NASA, are decreasing in the face of ever more demanding pyrotechnic applications. For example, McDonnell Aircraft Company, St. Louis, Missouri, a leader in pyrotechnic applications, such as crew escape systems in the Mercury, Gemini and the F-111 aircraft, in the past 3 years has experienced a reduction of senior staff from seven to three. NASA-JSC is the only Center that has recognized and reversed this trend.

Training.- No formal training exists that meets the needs for today's sophisticated pyrotechnic applications. There is no engineering curriculum devoted to pyrotechnics at any college or university. Very few safety courses are available to assure personnel safety in handling and using pyrotechnics, and to provide protection for systems in which pyrotechnics are applied. Personnel active in this field usually have received their education from the small handful of mentors described in the section on sources of information. There are few pyrotechnic personnel with the "hands-on" experience necessary to construct and apply the optimum approaches for design, development, qualification and lot acceptance testing. The greatest lack of experience is in testing to understand the mechanisms and relative importance of pyrotechnic system variables of pyrotechnic devices to prove functional margins.

Standards for requirements and hardware.- Most Centers develop their own specifications and hardware design philosophies, which can vary considerably. Also, managers in rushing to use "off-the-shelf" hardware to reduce costs, often discover a mismatch in form, fit or function, and then are forced into a redesign and "make-it-work" mode. Many potential users, such as university-sponsored experimenters, cannot afford to develop and qualify pyrotechnics for their particular system requirements. No low-cost, high-reliability components, other than the Government-furnished NASA Standard Initiator, are available. Hence, new products are continuously offered and the consequence is new problems or the reinvention of the old ones. There is no apparent motivation or general support for manufacturers to develop additional standardized components. However, difficulties have been encountered in the application of the NASA Standard Initiator. As designed, the output of the NASA Standard Initiator produces a dynamic (high-pressure/short-duration) output, which is suitable for its intended ignition function. However, problems have occurred in attempting to use its output to accomplish mechanical functions as a pressure generator.

Future requirements.- No shared approach has been established on recognizing pyrotechnic requirements or technology development needed for future missions. Unfortunately, technologists are trying to respond as the needs occur, without being able to develop a technology base or have the opportunity of participating in establishing advanced system definitions. This often leads to being "designed into a corner;" that is, forced to accomplish a function with pre-established limitations on input energy, weight, volume and output performance. Furthermore, since pyrotechnic systems are generally so unique (designed for specific applications) and costly, manufacturers cannot be expected to internally fund research and development to meet future requirements.

PE23-021 005400 ER

ORIGINAL PAGE IS
OF POOR QUALITY

Funding.- There is no general research and development advocate nor fund source from either the NASA or the Air Force Space Division Headquarters dedicated to solving pyrotechnic problems and to meeting requirements for advanced aerospace pyrotechnic systems. All pyrotechnic funding is now earmarked by projects, whose limited schedules and funds often preclude or restrict new development. These restrictions force pyrotechnic managers to attempt to use supposedly "off-the-shelf" hardware, which often will not meet the current system requirements. This results in protracted, costly and inefficient design and development efforts.

CONCLUSIONS

In an effort to determine the causes of and preventing continuing failures in spacecraft systems using pyrotechnics, which are explosive and propellant-actuated mechanisms, excluding propulsion, a survey and analysis has been conducted on hardware failures that occurred in the final phases of system applications. That is, after design and in or following system qualification. The analysis included when and the causes for occurrence, the "state-of-the-art" that allowed failures and recommend improvements.

The total number of failures, including three deaths, reported in this survey was 84 for the 23-year period of the compilation with an average of 3.65 per year. The survey was an informal compilation, based on memory and limited documentation. No Center maintains a complete formal record of failures. Therefore, no technical problem data base has been established by this study. The failure rates per functional category were 32 in mechanisms, 30 in initiation, 14 in separation systems and 8 in electrical firing circuits. A total of 12, or over 14 percent, of the failures occurred in flight with 15 in qualification, 1 in manufacture following qualification, 33 in lot acceptance testing (LAT), 14 in systems tests, 5 in final assembly and 4 in service life evaluation tests. Clearly, some lot acceptance testing is adequate in discovering flaws in functional performance. However, some lot acceptance testing needs improvement, since more failures occurred after this testing than before.

For the source of failures, the shocking statistic is that 35 of 84 (42 percent) of the failures were caused by a lack of understanding; that is, the personnel working the problem at the time did not have the technology needed to understand and correct the failure. Unfortunately, 24 were mistakes, caused by poor designs and misapplication of hardware, which means that personnel did not apply the known technology. The next 22 failures have to be categorized as carelessness, through manufacturers' poor procedures and quality control. Program managers were at fault in three cases in not having established correct procedures and creating an incorrect specification.

The assessment as to the reasons why and how these failures occurred show the need for many improvements. Pyrotechnics should be recognized as an

PE23-021 005401 ER

engineering technology, not considered a subsystem of other disciplines, or even worse "nuts and bolts" and magic. The lack of experienced personnel have discouraged program managers from early considerations of their use, even when important benefits can be achieved. Guidelines are needed for pyrotechnic system design, development, (which includes demonstration of functional margins), qualification and acceptance. Some past managers have actually implied that pyrotechnics cannot really be understood, and the best that can be done is to develop statistical verifications of success. That is, once a successful performance was achieved, reliability was based on repeated success. Statistical approaches are not a possible solution where cost is the key, particularly when entered into without knowing if the system is over- or marginally designed.

Inadequate communication and the lack of information have prevented the optimization of design approaches and failure analyses. Most Centers have worked pyrotechnic efforts independently. Few pyrotechnic publications exist, with no library or central source of information. Particularly lacking is a databank for failures. Without sharing, the opportunity for capitalizing on the varied experience of the handful of specialists in this country is limited.

There is an inadequate number of experienced pyrotechnic personnel and capable test facilities to assure successful system management. More experienced pyrotechnic personnel and test facilities are needed. Without sufficient manpower, training, and test facilities, program managers have had too great a reliance on manufacturers. Pyrotechnic personnel have no formal training opportunities, are generally transient, and are not encouraged to stay in the field. Consequently, too heavy a reliance on manufacturers has evolved in educating pyrotechnic managers, as well as proposing on pyrotechnic systems without an accurate definition of requirements. Furthermore, there is a need for personnel, working in active facilities to develop "hands-on" experience to become more knowledgeable customers, to manage system failure analyses, independent from the manufacturers' vested interests, and to conduct the necessary research and development to meet future requirements.

Too many specifications and too wide a variety of pyrotechnic devices exist, creating costly confusion in selection by users, as well as continually creating new problems or reinventing the old ones. Each Center has developed its own specifications and preferred hardware. Standardized specifications and hardware, extending the approach of providing Government-furnished equipment, would greatly facilitate consideration and use of pyrotechnic systems, as well as enhancing system reliability. However, to avoid the major pitfall of misapplying technology, clear definitions of system performance capabilities must be developed and documented.

No pyrotechnic technology planning exists on an agency-wide basis. There is a need to develop overall NASA Headquarters-sponsored planning to manage this discipline. Headquarters advocates are needed for administrative and funding support to influence all administrative levels to recognize the activities necessary to elevate pyrotechnics to a technology and incorporate this technology into an active role in management structures, create a problem

PE23-021 005402 ER

reporting and communication system, and provide the necessary funding, independent from major program offices, to accomplish in-house applicational studies, failure analyses and research and development.

PE23-021 005403 ER

RECOMMENDATIONS

The following recommendations are offered for meeting the pyrotechnic technology needs described in the above conclusions:

1. Continue inter-Center coordination through the NASA/DOD Aerospace Pyrotechnic Systems Steering Committee and symposia activities to:

   a. Promote technology exchange

   b. Assist in problem solving and failure resolution

   c. Support design reviews

   d. Conduct independent technical assessments of systems.

2. Provide guidelines, handbooks and specifications for design, development, qualification, lot acceptance, safety, reliability and quality assurance

3. Encourage recruitment and retention of pyrotechnic personnel

4. Provide safety and engineering training, including "hands-on" experience

5. Compile experience through a NASA-wide pyrotechnic problem reporting system to maintain a technology base.

6. Expand the concept of Government-furnished equipment with clearly defined functional capabilities.

7. Recommend and implement pyrotechnic planning to improve personnel experience and provide for needed technology and development.

TABLE II

FAILURE SOURCE CATEGORIES AND DEFINITIONS

1. Incorrect Specification - An unnecessary or erroneous requirement.

2. Bad System Test Procedures - System test procedures inadequate or erroneous.

3. Manufacturer's Poor Quality Control - All quality control in place, but not followed.

4. Manufacturer's Bad Procedures - The quality control procedures or manufacturing methods inadequate.

5. Bad Design - Personnel did not apply known technology.

6. Lack of Understanding - Personnel did not have the needed technology.

7. Misapplication of Hardware - Use of previously qualified device in an inappropriate application.

16. Abstract

Although pyrotechnics have successfully accomplished many critical mechanical spacecraft functions, such as ignition, severance, jettison and valving (excluding propulsion) failures continue to occur. This paper provides a listing of 84 failures of pyrotechnic hardware with completed design over a 23-year period, compiled informally by experts from every NASA Center, as well as the Air Force Space Division and the Naval Surface Warfare Center. Analyses are presented as to when and where these failures occurred, their technical source or cause, followed by the reasons why and how these kinds of failures continue to occur. The major contributor is a fundamental lack of understanding of the functional mechanisms of pyrotechnic devices and systems, followed by not recognizing pyrotechnics as an engineering technology, insufficient manpower with "hands-on" experience, too few test facilities, and inadequate guidelines and specifications for design, development, qualification and acceptance. Recommendations are made on both a managerial and technical basis to prevent failures, increase reliability, improve existing and future designs and develop the technology to meet future requirements.
