Concern Customer states check engine warning indicator in dash cluster is on solid-check and advise						
Correction Verified customer concern. Scanned vehicle for DTC's and retrieved DTC P0AFA. Performed circuit/system verification by verifying the drive motor battery is between 20-30% of charge and verified it is between 20-30% charged. Will need to charge the battery and continue with diagnostics. Charged the drive motor battery and performed circuit/system verification. With the vehicle in service mode made sure the DTC's listed on the document were not set on the vehicle, verified the scan tool Hybrid/EV Battery Pack Terminal 1 Voltage is between 164.9438?V, since they are within range next verified the scan tool Hybrid/EV Battery 196 voltages are between 3.45-4.56?V and all readings are within 0.03?V of each other, since the freeze frame failure records are not available will need to drive the vehicle under high hybrid/EV battery load conditions, such as hard acceleration, and attempt to set the DTC. After driving the vehicle and attempting to set the DTC the DTC did not set again. No repairs needed at this time if check engine light illuminates again please advise customer to return the vehicle to retrieve the freeze frame failure records.
