Investigation: EA24001
Prompted By: VOQ Review
Date Opened: 02/01/2024
Investigator: Alexa Ardron
Reviewer: Matthew Martens
Approver: Tanya Topka
Subject: Loss of steering control

MANUFACTURER & PRODUCT INFORMATION

Manufacturer: Tesla, Inc.
Products: 2023 Tesla Model 3 and Y
Population: 334,569 (Estimated)

Problem Description: Loss of steering control, frequently accompanied by driver-facing messages indicating that power steering assist is reduced or disabled.

ACTION/SUMMARY INFORMATION

Action: An Engineering Analysis (EA) has been opened.

Summary:
On July 28, 2023, The Office of Defects Investigation (ODI) opened a Preliminary Evaluation (PE23-014) after receiving 12 Vehicle Owner Questionnaires (VOQs) reporting loss of steering control in model years (MY) 2023 Tesla Model 3 and Y vehicles. During PE23-014, ODI interviewed complainants, sent an Information Request (IR) letter to Tesla, and convened technical meetings with Tesla that included a joint inspection of a crashed vehicle.

The investigation identified 2,388 total complaints regarding the alleged defect, including the 124 complaints identified through VOQs and 2,264 complaints through manufacturer data. ODI is associating 1 crash to this investigation (11544655), where a driver was unable to complete a right hand turn in the intersection and hit
a vehicle. This vehicle was subject to a joint inspection by ODI and Tesla. The steering rack was recovered by
ODI with the consumer’s permission.

ODI’s interviews of allegations supplied to the agency, in the form of VOQs, identified patterns of the
incoming complaint traffic. Complaints allege an inability to turn the steering wheel, while other complaints
allege an increase in required effort to turn the steering wheel. These conditions were reported to occur
during the drive cycle as well as at start-up. Approximately one-third of complaints with a reported speed
occurred at vehicle start-up or speeds less than 5 mph. Interviews with failures reported at speeds over 5
mph, half reported an inability to turn the steering wheel. A majority of complaints with a reported speed
reported between 5 mph and 35 mph with approximately 1 in 10 occurring on open roads at speeds 35 mph
and over. The highest reported speed regarding an alleged inability to turn the steering wheel is 75 mph. A
majority of allegations reported seeing a warning message, “Steering assist reduced”, either before, during or
after the loss of steering control. A portion of drivers described their steering begin to feel “notchy” or “clicky”
either prior to or just after the incident.

There have been multiple allegations of drivers blocking intersections and/or roadways. ODI is aware of over
50 vehicles which were allegedly towed as a result of the condition from a variety of areas including,
driveways, parking lots, side of road and intersections. Multiple complaints state they were able to temporarily
remedy the condition by power cycling the vehicle, but the issue reoccurred until the steering rack was
replaced.

Tesla supplied four steering rack part numbers on MY 2023 Model 3 and Model Y vehicles. PE23-014
identified part numbers, 1044832-00-A and 1188832-00-A accounted for 2,187 of the complaints and 4 did
not have original part number in the information request.

This Engineering Analysis has been opened to characterize the conditions leading to- and stemming from-
failures with steering rack part numbers 1044832-00-A, 1188832-00-A.
