VOQ 888619

When trying to start the vehicle, it would not crank. Instead, all dash indicator lights, interior lights, and exterior lights began flashing. Numerous random error messages began flashing on the dashboard screen. Then a large plume of smoke began coming out from under the hood and there was an acrid burning smell. No flames were visible so the fire department would not respond when called and advised to have it towed. After much difficulty loading onto a tow truck (the parking brake would not disengage--dash indicated a parking brake fault as one of the many errors--so it had to be dragged onto the flatbed tow truck) the vehicle was towed to the local dealership in Dothan, AL. Per the dealership, there was an underhood fire involving the starter and battery. We are unable to inspect the damaged components. They stated they are unable to remedy the smoke smell that has permeated the vehicle despite the disabling lung conditions of one of our family members. We have tried numerous times over the last 9 months to get the dealership to perform service required by NHTSA Recall # 22V859, but they keep stating the parts are unavailable. They will not say whether this underhood fire is directly related to the recall already in effect.

GSAR Customer Comments Citing "Various Electrical"

- ECUSTOMER STATES THAT VEHICLE SHUT OFF WHILE ATA LIGHT AND ALL THE LIGHTS ON DASH ST ARTINGFLASHING. CHECK AND ADVISE.
- Customer states vehicle died while driving. Smoke coming from engine bay. `Turning off to save battery` warning came on. Center screen went black. See history, check and advise.
- CUSTOMER HAS ESP CHECK ENGINE LIGHT IS ON . CUSTOMER STATES BRONCO STRUGGLES TO START BATTERY HAS BEEN REPLACED . CUSTOMER STATED THAT ON 9/26/2023 BRONCO DID NOT WANT TO START AND WHILE CRANKING TO START DARK BLACK SMOKE AND LIGHT GREY SMOKE CAME OUT FROM UNDER THE HOOD . PLEASE INSPECT AND ADVISE
- The engine does not start, and various brake related warning lamps are on on the instrument panel (lightning shape).

Follow-Up: Send summary and data/search to [redacted] sent 1/9/2024

Subject: Bronco Sport Follow-Up
Attachments: 2021 Bronco Sport Manual Park Release.pdf

Hello Joseph and Ayesha,

As a follow up to the open questions in yesterday's working level meeting, I followed up with our battery team to understand the service strategy. Dealers have the option to replace the Bronco Sport battery with either an Enhanced Flooded Battery (EFB) which is similar to the original equipment battery, or an Absorbed Glass Mat (AGM), depending on availability. Ford will investigate the possibility of revising the service procedure to install AGM batteries in service for all Bronco Sport vehicles.

For reference, I have also attached the Manual Park Release procedure from the owner's manual for the 2021 Bronco Sport.

Dave Smolarek
CCRG Manager – Unibody Platforms
Automotive Safety Office
[redacted]

Manual Park Release

WARNING: When doing this procedure, you need to take the transmission out of park (P) which means your vehicle can roll freely. To avoid unwanted vehicle movement, always fully apply the parking brake prior to doing this procedure. Use wheel chocks if appropriate.

WARNING: If the parking brake is fully released, but the brake warning lamp remains illuminated, the brakes may not be working properly. Have your vehicle checked as soon as possible.

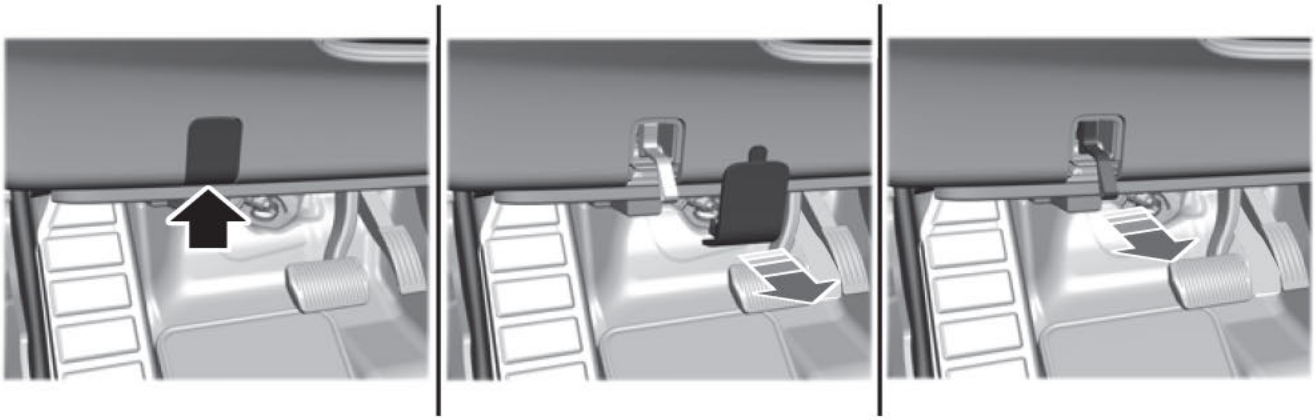
WARNING: Do not drive your vehicle until you verify that the stoplamps are working.

Use the manual park release to move your transmission from the park (P) position in the event of an electrical malfunction or emergency.

Activating the Manual Park Release Cable

1. Apply the parking brake. See **Electric Parking Brake** (page 177).

Note: *If the vehicle battery is dead, for example, no electrical power is available, you could use an external power source to apply the parking brake.*



2. Locate the manual park release cable access cover on the lower instrument panel dash to the bottom left-hand side of the steering column.
3. Using a tool or the key blade, carefully open the access cover.

Note: *Do not pull the tether until you are in the driver seat.*

4. Switch the ignition on, but do not start your vehicle.
5. Once in the driver seat, fully press the brake pedal and hold. Do not release. Pull the orange tether towards the driver seat until the tether gets locked in the override position. Then leave the tether.
6. If done correctly, a message on the instrument cluster displays Park Not Available, Transmission Not in Park, or Shift System Fault.

Note: *Your vehicle is now out of the park (P) position and is free to roll.*

7. With your foot still fully applied on the brake pedal, disengage the parking brake. See **Electric Parking Brake** (page 177).
8. Your vehicle remains in neutral (N) for emergency towing purposes.
9. Switch off the ignition.
10. Once it is safe to do so and there is no risk that your vehicle will roll, disconnect the negative, black battery cable from the battery. If the vehicle rolls before disconnecting the battery, the electric parking brake could apply. You may need to release the parking brake again. See **Electric Parking Brake** (page 177).

Returning Your Vehicle to Normal Mode

1. Once it is safe to do so, reconnect the negative, black battery cable to the battery.
2. Apply the parking brake. See **Electric Parking Brake** (page 177).

Note: *If the vehicle battery is dead, for example, no electrical power is available, you could use an external power source to apply the parking brake.*

3. Fully apply the brake pedal and hold. Do not release. Pull the orange tether outward toward the driver seat to release it from the override position.
4. The cable releases and retracts back to its original rest position.
5. Stow the manual park release cable tether back inside the instrument panel dash hole, install the access cover by pressing it back in position.
6. With your foot fully applied on the brake pedal, start your vehicle. Confirm that your vehicle is in the park (P) position and that the instrument cluster indicates park (P).
7. If the instrument cluster is not displaying the park (P) position or a message displays on the instrument cluster screen, make sure you apply the parking brake before exiting your vehicle. Contact an authorized dealer for service.

Information Messages

[redacted]

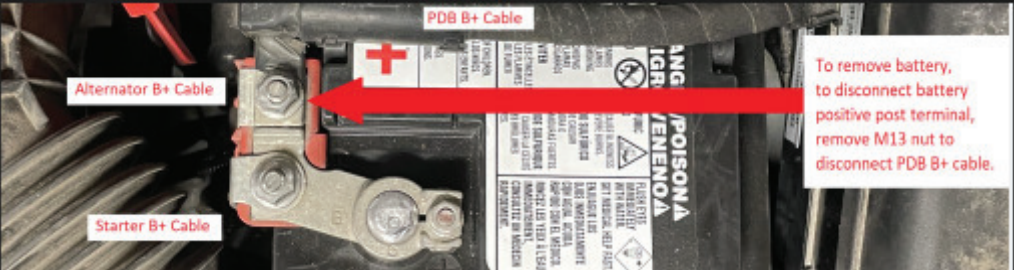
There's a Bronco/Escape FSA 22S73 that installs a drain tube for Fuel Inj leaks. FSA published 1 year ago. To install the drain tube, the technician has to remove the CX430 and CX482 12V battery and air filter box.

[redacted]

For two 21CX430 1.5L that submitted stall claims then said they could restart later, dealers performed FSA 22S73 0.5months and 3.5months before their stall incidents.

[redacted]

This design should be common for 21MY to present/future CX430 and CX48x.



PDB B+ Cable
Alternator B+ Cable
Starter B+ Cable
To remove battery, to disconnect battery positive post terminal, remove M13 nut to disconnect PDB B+ cable.

Subject: 2021 Ford Bronco Sport (LOMP)

WARNING: This message originated outside of Ford Motor Company. Use caution when opening attachments, clicking links, or responding.

Good Afternoon David,

To recap our conversation this morning, we are looking into a trend for the 2021 Ford Bronco Sport for allegations of a loss of motive power while in transit, followed by a complete electric system failure, with no ability to restart. A couple of points, collected from our research :

- The vast majority of the reported incidents are occurring when the vehicles are stopped at a traffic controlled intersection
- Multiple consumers have relayed that when their vehicles are towed to the dealership, it is diagnosed that the battery has failed and that a battery replacement is the only necessary repair.
- After battery replacement, we don't have any reports of repeated lomp incidents. (worth noting, the timeframe is about a month, from the replacement of the battery to when we talk to consumers)
- We currently have **29** reports

As discussed we are planning on presenting this issue to our leadership in a couple of weeks (I project around a month timeframe) and would appreciate any insight/additional information that your team can provide. Joseph Teitelman will be the POC for this issue and will follow up with the VOQ/VIN #s we are authorized to share through SFTL, to facilitate the discussion. I appreciate the support. Please reach out, if you have any additional questions/concerns.

Thank You,

Ayesha

Subject: RE: GSAR Reports to Check DTCs

Hi Sarra,

I ran these a couple of different ways, but received similar results back. I took each of your files and filtered only for the claims potentially responsive to LOMP. I then fed the claim keys (method 1) and the VINs (method 2) back into GSAR to see what the DTC extraction looked like.

The most common DTC was a U3003 – Battery Voltage, but I wouldn't say it was a strong trend amongst the responsive claims, maybe on the order of 6% of the responsive claims. You can see the rest was a smattering of lower count DTCs.

I was hoping this might realize some more definitive trends, I'm not seeing it though.

Please let me know if you have any questions or thoughts on this method and if you want to discuss.

Best Regards,
Travis Henney

Subject: GSAR Reports to Check DTCs

Hi Sarra,

If you can send or share your CDR search with those LOMP reports of interest identified, I can feed the VINs and claim keys into GSAR to see if we can pull the associated DTCs to see if there are any trends amongst them.

Best Regards,
Travis Henney
Automotive Safety Office-Senior Safety Engineer

Consumer Comments
This morning I was driving to work (65mph cruise control, 45 degrees F outside, heated seats ON), out of nowhere I felt myself slowing down right after I went over a railroad track (pretty decent bump) on the highway. As I was slowing down I noticed that my cruise control had turned itself off and when trying to tu
While driving today, this car abruptly stopped in the middle of the road. it would not restart and it was puttering over and over and popping for no reason it was resulted in me being stranded in the middle of a busy arterial for three hours. I called roadside assistance to jumpstart the vehicle and within three minut
My 2021 Bronco failed our family on Friday. The Bronco failed to start upon pressing the start and brake pedal. The main console panel started flashing then cycling through all kinds of failure alerts. There was a series loud noises from the engine, the headlights flashed off and on for over 3 minutes and then the en
My 2021 Bronco failed our family on Friday. The Bronco failed to start upon pressing the start and brake pedal. The main console panel started flashing then cycling through all kinds of failure alerts. There was a series loud noises from the engine, the headlights flashed off and on for over 3 minutes and then the en
I was on my way to work and as I approached a 4-way intersection, the auto-stop feature on the vehicle shut the engine off. The vehicle's instrument panel started blinking then went completely black. The vehicle became completely disabled... the hazard lights were only functioning intermittently. I tried to re-star
I was on my way to work and as I approached a 4-way intersection, the auto-stop feature on the vehicle shut the engine off. The vehicle's instrument panel started blinking then went completely black. The vehicle became completely disabled... the hazard lights were only functioning intermittently. I tried to re-star
I was driving back home from errands and during a stop, the entire car suddenly powered off and became unresponsive. I couldn't even flash my hazards and was stuck in the middle of a busy intersection. Also couldn't put it in neutral since the gear shifter is electronically powered. Some bystanders tried to jump r
When trying to start the vehicle, it would not crank. Instead, all dash indicator lights, interior lights, and exterior lights began flashing. Numerous random error messages began flashing on the dashboard screen. Then a large plume of smoke began coming out from under the hood and there was an acrid burning sm

It was if someone disconnected the battery completely from the car. No lights, No screen, No ignition. The traffic light turned green and I immediately pres
This vehicle is just two years old and has 38,000 miles. Meticulously maintained from day one. It is equipped with the start/stop feature. On July 8, 2023 when stopping for traffic at a U-turn lane on a heavy traveled highway the engine shut off and the entire vehicle went dead, leaving the car unable to re-start or n
My vehicle died on my driveway. I have no power, no lights, cant open my locked trunk. Checked voltage on the battery. It shows 12.6V (normal, so no need to jump start). Checked the same thing on the other side of the main harness (in the engine compartment). It shows zero. Something is wrong with the main h
After coming down an incline in my garage at work I stopped at a red light, took my foot off of the brake to let the brake assist kick in and my auto idle kicked off as well. Within seconds my car shut off and the instrument panel started flickering. I got SEVERAL error messages flashing by quickly including the Park B
I got a letter from FORD about a 22C20 Recall of the side curtain airbag. January 2023 And I got a letter in the mail from Ford May 24 2023 and it says your 22C20 recall part is ready. I got an appointment from ford frontier June 1 2023 and when the dealer Service Advisor Jesus Labrada told me sorry, we don't ha
Car electrical system was completely dead at only 9500 miles and required a jumpstart and battery replacement
Parked in front of garage turn off and knew something was not right. truck loss all power . was dead ,,completely dead. The next day I was leaving for a trip. called for tow and tow could not jump it. truck would not go into neutral. Hybrid electric transmission would not go into neutral. I left for trip came back and

There was no power to the vehicle and it wouldn't even turn over. I tested the truck battery and it was completely dead. Wednesday the 2
Truck has been going into deep sleep. Failed to start do to battery while in garage. Failed to start another time leaving me stranded. Dealership has replaced battery 2 times. I mentioned checking wiring harness, but they just replaced battery. Approximately 3 weeks after replacing battery 2nd time it is going into d
Twice, within a one week period, my hybrid vehicle failed to start. In fact, the key fob failed to unlock vehicle. I changed the battery in one key fob and still wouldn't unlock the vehicle. I had to unlock vehicle manually with the key and vehicle still wouldn't start. Vehicle dash board and all interior lights not working.
Total loss of electric power. There are no dashboard lights or indicators. There were no warning signs or indicators. The car drove fine to work but was dead by lunch time. Battery reads above 12V.
Two issues with my 2022 Hybrid Maverick: First, the brakes are unpredictable. Often in slow moving situations, the brakes fail to engage until I ultimately have to floor the pedal often causing a grinding noise and abrupt stop. Attempts to slowly brake sometime fail. Passengers in truck are thrusted forward whe
Driving the vehicle between on a highway and, repeatedly, the control panel would completely shut down with the warning that the battery was running low on power. It doesn't make sense since the vehicle is less than two years old.
I know there are issues with the Hybrid versions, but this one is not a hybrid. I have had the battery die 4 separate times resulting in me being stranded due to no fault of my own. This Ford Maverick was purchased through the Military Auto Sales at Ramstein AB Germany. It is US-spec and owned/operated by a US
Many electrical faults caused by a bad wiring harness from the 12 V battery to the fuse block. Battery shows a full 12 volts but faults at the fuse block. Can be jump started, but will not start after ignition is turned off and shows zero dash lights when trying to restart.
I was driving East on Rte 70 near Mt. Airy, MD at approximately 2 am the morning of Sunday, Oc. 11. at approximately 65 mph. In and instant all power to the vehicle went dead. The engine stopped and all electrical components went dead. Most importantly, my lights went out, the power steering was inoperable
I was driving East on Rte 70 near Mt. Airy, MD at approximately 2 am the morning of Sunday, Oc. 11. at approximately 65 mph. In and instant all power to the vehicle went dead. The engine stopped and all electrical components went dead. Most importantly, my lights went out, the power steering was inoperable
At 6k miles my early build 2022 ford maverick hybrid died entirely while sitting in the garage. The truck can be jumped but will not hold a charge beyond that one use. The battery is fine according to the dealer, but it appears internal connections are not correct, causing the truck to die after every use. Ford is sayi

The battery is fine according to the dealer, but it appears internal connections are not correct, causing the truck to die after every use. Ford is sayi
My truck repeatedly enters Deep Sleep mode. According to Ford, Deep Sleep mode activates when: (a) Vehicle inactivity for 14 consecutive days (b) The battery voltage drops below 9.5 volts; or (c) Extremely cold/hot weather conditions. My truck is never inactive for 14 days and has never been in extreme cold/ho
VEHICLE HAS NO POWER ANYWHERE... AS IF THE BATTERY IS DISCONNECTED.. TECHNICAL SERVICE BULLETIN #22-2340
Vehicle wouldn't start, had to jump start it under the hood. 12V battery under rear seat showed sufficient voltage. Took vehicle to dealer and they reproduced and confirmed the conditions. Vehicle is still at the dealership awaiting repair. Suspect faulty soldered terminal in the battery wiring harness. Safety issue if
When turning off the vehicle, all electrical is powered off, and will not turn back on. This includes all door locks and shifting abilities. The vehicle cannot be switched to neutral to be moved without battery power and a manual override.
Drove vehicle, stopped and turned off the vehicle. No lights, no power nothing at all. Jumped vehicle and drove the vehicle home with no issues. I tried to restart the vehicle and nothing at all again. 12 volt battery was tested and found to be in good condition so it was not the battery. I had the vehicle towed to the
Yesterday I pulled into a gas station and the moment I turned the key off everything went dark. Usually the radio and instrument cluster stay on for a bit until I open the door but not this time. 5 minutes later it finally came back on, after me trying to investigate what's happening. Thought it was a fluke and drove a
Returning home from vacation. Stopped for lunch. Went back to vehicle and Vehicle was dead. After repeatedly hitting unlock button was able to unlock vehicle. Since I was aware of this potential issue I had a battery booster jump pack in the vehicle...but if you can't unlock the vehicle you are out of luck. Luckily
Purchased new 7-22-2022. On 8-10-2022 drove 14 mi, parked for 2 hours, tried to start truck, message on dash said "stop safely now ", with red triangle, check engine, battery warning lights. Tried repeatedly to start truck waiting 15 minutes each time, wouldn't start. Used ford pass on phone to call for tow. When
There is a wiring harness that connects the 12v battery in the hybrid Maverick versions with the components in the engine bay -- dozens of users in one the Maverick Truck Club forum have posted about this wiring harness failing due to a poor solder connection. This has now happened to me as well. In my case,
I was driving on the highway at about 70 MPH when the truck gave me a Powertrain Malfunction/Reduced Power notification & the red battery light came on. The truck then had a Pull Over Immediately (Not 100% sure on the wording) notification on the dashboard and stopped accelerating. Once the notification p
The contact owns a 2022 Ford Maverick. The contact stated that he had come to a complete stop and had turned off the vehicle. However, upon attempting to start the vehicle, the vehicle failed to start. The contact stated after manipulating the battery cable, he was able to restart the vehicle. However, the failur

Subject: RE: 14D KO meeting (23-765) 2021 Bronco Sport LOMP 12V Battery

Good afternoon, Dan,

I was able to get into GRID, but I can't pull up 23-765. I tried searching for it but when I do, I get the error of access denied that my role doesn't allow me to search for other issues.

Any ideas? Can you share the 14D with me?

Thanks very much.

Subject: RE: 14D meeting - 23-765 Bronco Sport LOMP

The Core team has a deep technical knowledge of the Feature is responsible for Requirements and Feature Foundation Documents Releases.
From the Feature application side, we run testing mainly at vehicle level, by following the Design Verification Methods from the Core Feature team.

I assume, that the decision on keeping the Core team is due to their deep technical expertise as well as they are allocated in Dearborn and my team is in Mexico.

Regards,

Erick M

Hello Daniel,

Thanks for including us in this invite.

Per my manager direction, from Feature Standpoint, this issue is covered with the Core team from Start Stop, in this case David Moyer and Ahmed Awadi.

My team owns the Feature Application David Rojas and myself. So, we won't attend this meeting.

Regards,

Subject: Bronco Sport - Flooded Battery Supplier

Team,
Who is the supplier for the MY21 Bronco Sport flooded battery and who would be the best contact so that I can request their quality data on the suspected batteries? Thank you.

Kind Regards,

Subject: RE: Bronco Sport - LOMP following start/stop events

Team,
Following our discussion today here are the actions I noted:

- PVT team requested some of the flooded batteries from customer warranty replacements to evaluate.
- Daniel to ask for Ford Employee's Bronco Sport VIN number so we can get connected vehicle data. Her vehicle experienced similar symptoms of loss of power but was able to recover.
- Jason Baker to compare engine stop start calibration data on the BCM Gen II compared to the Escape program

We will meet again on Friday.

Thank you,
Sarra

Thanks to you all.

We are still searching for the right battery to use for the test. I just checked with Cross & Black, and tomorrow by 10AM, we should know for sure if they have it or not.
Once I confirm that we have a battery, I will arrange with Hector on picking it up.

Subject: RE: Bronco Sport Follow-Up

It was my Bronco Sport but it never happened while driving. It has, however, happened about 3 times after stopping somewhere and then trying to start it back up. Push to start won't even crank and all the warning lights go off/complete electrical failure.

The service garage hasn't been able to figure it out BUT for what it's worth, they noted that it would start if they really pushed down hard on the parking brake while attempting to start. So we tried that the third time it happened, and sure enough, it fired right up.

Good morning Dave,

Ahead our meeting next week, I wanted to share with you a recent VOQ (11560316) that we have received which is related to this Bronco Sport issue. In following up with this consumer, we were able to confirm that she experienced a loss of motive power with complete electrical failure while traveling approximately 20 miles per hour with her foot on the accelerator pedal. Additionally, the consumer described that her wheels locked up when the loss of power occurred and that she had no ability to restart the vehicle or put on the hazard lights after coming to a stop in the travel lane. I will be sending a separate email to you via SLFTS to share the VIN for this complaint. We ask that you and your team please review the complaint and VIN and include it in our follow-up discussion of this issue next week.

Regards,

Joseph Teitelman
General Engineer, Office of Defects Investigation

Hello Joseph and Ayesha,

As a follow up to the open questions in yesterday's working level meeting, I followed up with our battery team to understand the service strategy. Dealers have the option to replace the Bronco Sport battery with either an Enhanced Flooded Battery (EFB) which is similar to the original equipment battery, or an Absorbed Glass Mat (AGM), depending on availability. Ford will investigate the possibility of revising the service procedure to install AGM batteries in service for all Bronco Sport vehicles.

For reference, I have also attached the Manual Park Release procedure from the owner's manual for the 2021 Bronco Sport.

Subject: RE: Power Loss- Bronco Sport 12V Battery
Attachments: MY21 Filtered Claims.xlsx

Categories: CCRG Working

Miguel,
Can you order a few HTIS (24 to 36 month) batteries with similar Customer Comments to be shipped to Cross and Black?

Many of these state that the vehicle died at the stop light.
The customer descriptions in MY21 Filtered Claims, column BL,:

Row 17: CUSTOMER STATES VEHICLE SHUT OFF AT STOP LIGHT WITH AUTO START STOP FEATURE AND WOULD NOT START BACK UP. VEHICLE WENT COMPLETELY DEAD WITH THE DASH AND LIGHTS NOT ILLUMINATING. CUSTOMER WAS ABLE TO JUMP VEHICLE BUT AS SOON AS IT IS SHUT OFF THE VEHICLE WILL NOT START BACK UP WITHOUT JUMP.
Row 19: CUSTOMER STATES WHILE STOPPED AT STOP LIGHT ALLLIGHTS ON DASH CAME ON AND ENGINE STALLED. STARTSTOP BUTTON BEGAN BLINKING. EV ENTUALLYEVERYTHING WENT BLACK.
Row 24: C/S THAT VEHICLE DIED AT STOPLIGHT YESTERDAY (5/14) AND HAD NO POWER AT ALL, NOT EVEN HAZARD LIGHTS. VEHICLE TOWED IN.

- Kurt Kilian

Subject: RE: Vin number for Ford employee's Bronco Sport

Daniel,

Do you mean you pushed down hard on the brake pedal as opposed to the parking brake?

Chad Korte (He/Him/His)

Subject: RE: Vin number for Ford employee's Bronco Sport

Kurt, Chad,
Can we have both your teams look at the connected vehicle data for this vehicle too? This was from the Ford employee who experienced an issue on her Bronco Sport.

From: Carene, Daniel (D.J.) <dcarene1@ford.com>

Subject: Vin number for Ford employee's Bronco Sport

3FMCR9C6XM[redacted]

Not sure if this is related.

Here is the text she wrote below. Anyone else need this Vin number?

"It was my Bronco Sport but it never happened while driving. It has, however, happened about 3 times after stopping somewhere and then trying to start it back up. Push to start won't even crank and all the warning lights go off/complete electrical failure.

The service garage hasn't been able to figure it out BUT for what it's worth, they noted that it would start if they really pushed down hard on the parking brake while attempting to start. So we tried that the third time it happened, and sure enough, it fired right up. "

Daniel J. Carene

Subject: RE: Power Loss- Bronco Sport 12V Battery
Attachments: MY21 Filtered Claims.xlsx

Miguel,
Can you order a few HTIS (24 to 36 month) batteries with similar Customer Comments to be shipped to Cross and Black?

Many of these state that the vehicle died at the stop light.
The customer descriptions in MY21 Filtered Claims, column BL,:

Row 17: CUSTOMER STATES VEHICLE SHUT OFF AT STOP LIGHT WITH AUTO START STOP FEATURE AND WOULD NOT START BACK UP. VEHICLE WENT COMPLETELY DEAD WITH THE DASH AND LIGHTS NOT ILLUMINATING. CUSTOMER WAS ABLE TO JUMP VEHICLE BUT AS SOON AS IT IS SHUT OFF THE VEHICLE WILL NOT START BACK UP WITHOUT JUMP.
Row 19: CUSTOMER STATES WHILE STOPPED AT STOP LIGHT ALLLIGHTS ON DASH CAME ON AND ENGINE STALLED. STARTSTOP BUTTON BEGAN BLINKING. EV ENTUALLYEVERYTHING WENT BLACK.
Row 24: C/S THAT VEHICLE DIED AT STOPLIGHT YESTERDAY (5/14) AND HAD NO POWER AT ALL, NOT EVEN HAZARD LIGHTS. VEHICLE TOWED IN.

Subject: RE: 2021 Bronco Sport LOMP Claims & Searching

Sarra – Hopefully this link to the Quality Early Detection (QED) site works filtered on 2021 Bronco Sport battery: [redacted]

This commodity detection is in critical status for this MY/vehicle line.

If it does work, you might explore other MYs and vehicle lines being considered to see if there are similar critical detections related to the battery or other commodities. Critical means that the current claims are running above the historical baseline for a short term (3yr) or long term (5yr). These determinations are considered for: GSAR, GCQIS, and GCCT data. It does not tell you about the nature of the claims, only how the current counts compare to historical trends. Although you can download data at the QED site (same claims as CDR), the data/claims are best downloaded directly from CDR as you are doing (the data is more complete and formatting is friendlier for tasks like pivot charting)

Let me know if you have any questions if you think this might be helpful.

Best Regards,
Travis Henney
Automotive Safety Office-Senior Safety Engineer

Dave –

Here is the DRAFT for our meeting on the 20th. Gabe may provide more insight to vehicle testing results prior to that meeting.

Merry Christmas and Happy Holidays! You can text my cell if anything urgent comes up or you need any files/data, etc. Thanks!

Thanks.
It doesn't really look like we have much of a story to tell at this point. Should we maybe also include an ambient level of 12V battery claims across other vehicle lines for reference?

Subject: Bronco Sport Owner's Manual - Battery Choice

Ersin,
The Bronco Sport (CX430) is the only EFB battery currently being used by Ford in North America, so we added AGM as an acceptable replacement.
Below is a clip from the Bronco Sport owner's manual:

MOTORCRAFT PARTS - 1.5L ECOBOOST™

Component	
Air filter element.	FA-1939
Battery[1]	BHEF-48H6
Alternative battery.[1]	BAGM-48H6-760

Team –

As discussed yesterday – I am providing the Customer Comments from the VOQ reports filed with NHTSA for each of the 14 claims (Tab 1).

I've also included the comments from the reports I identified yesterday as potentially responsive from both Bronco Sport and Maverick MY21-23. I had shared the VINs yesterday, but the customer comments are now included in Tab 2.

Please let me know if there is any other data I can help to provide – thank you for the support!

Subject: Battery Usage for CX430 Repairs

Mike,
The CX430 (Bronco Sport) uses the NX6T-10655-A H6 EFB battery in production.

It is my understanding that the Dealerships can use the NX6T-10655-A, or the DS7T-10655-F (H6 AGM). Can we tell which battery is primarily used for CX430 service?

Miguel,
Can you order a few HTIS (24 to 36 month) batteries with similar Customer Comments to be shipped to Cross and Black?

Many of these state that the vehicle died at the stop light.
The customer descriptions in MY21 Filtered Claims, column BL,:
Row 17: CUSTOMER STATES VEHICLE SHUT OFF AT STOP LIGHT WITH AUTO START STOP FEATURE AND WOULD NOT START BACK UP. VEHICLE WENT COMPLETELY DEAD WITH THE DASH AND LIGHTS NOT ILLUMINATING. CUSTOMER WAS ABLE TO JUMP VEHICLE BUT AS SOON AS IT IS SHUT OFF THE VEHICLE WILL NOT START BACK UP WITHOUT JUMP.
Row 19: CUSTOMER STATES WHILE STOPPED AT STOP LIGHT ALLLIGHTS ON DASH CAME ON AND ENGINE STALLED. STARTSTOP BUTTON BEGAN BLINKING. EV ENTUALLYEVERYTHING WENT BLACK.
Row 24: C/S THAT VEHICLE DIED AT STOPLIGHT YESTERDAY (5/14) AND HAD NO POWER AT ALL, NOT EVEN HAZARD LIGHTS. VEHICLE TOWED IN.

Daniel,

Do you mean you pushed down hard on the brake pedal as opposed to the parking brake?

Kurt, Chad,
Can we have both your teams look at the connected vehicle data for this vehicle too? This was from the Ford employee who experienced an issue on her Bronco Sport.

3FMCR9C6X[redacted]

Not sure if this is related.

Here is the text she wrote below. Anyone else need this Vin number?

"It was my Bronco Sport but it never happened while driving. It has, however, happened about 3 times after stopping somewhere and then trying to start it back up. Push to start won't even crank and all the warning lights go off/complete electrical failure.

The service garage hasn't been able to figure it out BUT for what it's worth, they noted that it would start if they really pushed down hard on the parking brake while attempting to start. So we tried that the third time it happened, and sure enough, it fired right up. "

Team –

As discussed yesterday – I am providing the Customer Comments from the VOQ reports filed with NHTSA for each of the 14 claims (Tab 1).

I've also included the comments from the reports I identified yesterday as potentially responsive from both Bronco Sport and Maverick MY21-23. I had shared the VINs yesterday, but the customer comments are now included in Tab 2.

Please let me know if there is any other data I can help to provide – thank you for the support!

VIN	ODI/Source ID #	Incident Date	Model	City	Component	Consumer Comments
3FMCR9B[redacted]	11488542	10-08-2022	BRONCO SPORT	Kaufman	UNKNOWN OR OTHER	I was waiting to turn at a red light when the engine shut down and I lost all power induding all lights and locking mechanisms. I was unable to get it off the road because it was locked in gear. It had to be towed and dropped off at the dealer. It is still there at this time.
3FMCR9C[redacted]	11504039	08-28-2021	BRONCO SPORT	Lindale	ELECTRICAL SYSTEM	Charging System The vehicle safety systems and monitoring systems shut down due to battery charging system failures. Problem confirmed by Ford engineers. And Ford service where the vehicle is still sitting. Vehicle has been at dealership 90% since 8/2022. They and Ford engineers do not know what's wrong or why it will not keep a charge. Battery replaced, alternator and more but it still is unsafe to drive. Have too many warnings to count. And we have taken it to dealer for repair but nothing fixes it. And even the Ford engineers do not understand why it fails.
3FMCR9B[redacted]	11506114	02-07-2023	BRONCO SPORT	Brookshire	ELECTRICAL SYSTEM	While driving the vehicle the warning system activated and the entire car shut down. I was stranded in an intersection of a busy street during a heavy traffic period. I was unable to start the vehicle, use my hazards, or put the car in neutral to push it to a safe location.
3FMCR9[redacted]	11506164	02-07-2023	BRONCO SPORT	Rancho Cucamonga	ELECTRICAL SYSTEM	2nd time in a month this car has shut off completely while in motion. Both times in an intersection. No power to even turn on hazards to let traffic know I was stuck. Finally gets some power and hazards are able to come on but they are faulty and glitch, do not stay consistently on. Ford had no answers for me a month ago and just sent me home.
3FMCR9B6[redacted]	11513866	03-25-2023	BRONCO SPORT	Scottsdale	ELECTRICAL SYSTEM	On 3/25/23, I was driving down a 40mph road. I had been stopped at a stoplight and as soon as I started to drive again, the car started moving forward and then completely shut down. The entire engine, all power (dashboard lights, display screen, everything). I panicked and went to go turn the caution lights on--they wouldn't work. As people behind me started honking, I tried to roll down my window to motion them on--the window wouldn't roll down. I had no choice but to open my car door, and stick my hand out to start waving people on behind me. Knowing this was a dangerous situation to be stuck in the middle of the road with no way for cars behind me to know I was stalled, called 911. They transferred me to the local police department and within 10 minutes, an officer got behind me and turned his lights on to notify other cars to slow down and go around. After about 45 minutes of waiting for a tow truck, the police were getting concerned because of the continued safety risk. So they had another officer jump my car. That got it into the parking lot of a CVS, where it immediately died again. When it's dead, it tries to revive itself and periodically, lights will come on and start flickering. You then go to try to turn it on and are unable to. The latter situation has happened to me twice in the past (where it will not turn on, lights flicker, etc). However, in both of those former situations, my car was parked (once at my apartment complex and once at church) so there was not as much of a safety concern .However, for it to completely dead stop in the middle lane of an extremely busy road on a Saturday at 4:30p was extremely concerning. What is more concerning is that this car is <2 years old and should NOT be doing this. The 2 other times Ford has looked at this, they run diagnostic tests and say everything looks fine to us. As of right now, my car got towed to my Ford dealership and given today is a Sunday, I am awaiting their call on Monday.
3FMCR9B6[redacted]	11514767	01-15-2023	BRONCO SPORT	Nuevo	ENGINE AND ENGINE COOLING	The contact owns a 2021 Ford Bronco Sport. The contact stated that while driving at an undisclosed speed, the vehicle lost motive power, stalled, and then failed to restart. The loss of power train message was displayed. The vehicle was towed to the local dealer where it was diagnosed that the battery and control module needed to be reprogrammed. The vehicle was repaired. The manufacturer was not contacted. Additionally, the contact received NHTSA Campaign Number: 22V859000 (Fuel System, Gasoline); however, the part to do the recall repair was not yet available. The local dealer was contacted. The contact stated that the manufacturer had exceeded a reasonable amount of time for the recall repair. The manufacturer was not made aware of the issue. VIN tool confirms parts not available. The failure mileage was approximately 3,500.
3FMCR9[redacted]	11522221	05-08-2023	BRONCO SPORT	San Benito	ENGINE	The contact owns a 2021 Ford Bronco Sport. The contact stated that while approaching a stop light, the vehicle stalled. The contact pushed the vehicle off the roadway. There were no warning lights illuminated. The vehicle was towed to the local dealer however, the mechanic was unable to determine the cause of the failure. The vehicle was not repaired. The manufacturer was contacted and referred him to the NHTSA Hotline and another dealer. The failure mileage was approximately 19,000.

3FMCR[redacted]	11532731	07-17-2023	BRONCO SPORT	Sacramento	ELECTRICAL SYSTEM	I was driving down a city street in Sacramento and the car just suddenly stopped- engine and everything was off. I could not get the car to turn back on. Emergency lights would not come on, it was if the entire electrical system was out. I was in the middle of the road, so needed to put hazards on to warn others and I could not. Cops came to place flares to warn other drivers after 35 minutes. No warning codes or anything to let me know what was happening. Having car towed. 10 minutes before tow truck arrived, vehicle started, so I was able to move it to a safer place. But the car was inoperable for about an hour and a half.
3FMCR9[redacted]	11533264	07-15-2023	BRONCO SPORT	West Union	ELECTRICAL SYSTEM	The vehicle completely quit in heavy traffic. There were no warning signs, nothing, just completely dead. I had no option to put on hazard lights etc. Had this happened on the interstate, it would have been incredibly dangerous. It was still unsettling traveling home with others which included an 11 year-old. The police helped us get it started with a jump-box but on the way home it started to bonk out again which included a message regarding the system shutting down. I got home where the vehicle started lighting up and then it was dead yet again. A major safety issue. The vehicle has only 32K miles on it - a 2021. Ridiculous.
3FMCR9A[redacted]	11538770	08-13-2023	BRONCO SPORT	North Hollywood	ELECTRICAL SYSTEM	On 2 occasions, 7/30/23 and 8/13/23, my 2021 Bronco suddenly stopped working with no warning whatsoever. I had no way to put on any Emergency Flashers because there was no power. The same day as the first incident, the car was brought to my local Ford Dealer and they couldn't find any problem. When they inspected it the next morning, it started right up.I had been driving the car for 2 weeks and it happened while I was driving again on 8/13/23. It died the exact same way, with no warning and no way for me to alert other drivers around me. My vehicle is currently at the Ford Service Department and they are trying to find the problem.
3FMCR9B6[redacted]	11538977	08-09-2023	BRONCO SPORT	Key Largo	ELECTRICAL SYSTEM	I currently am at 14,000 miles on my 2021 Bronco Sport. I have had no issues prior to what happened to me on August 9th. While I was at a light my car went completely black with no warning and I was not able to put on hazard lights or put it in neutral to get off the busy highway. I had to call 911 as cars were zipping up close to mine and I was only able to wave my arms to get them to see my car was unoccupied. I was screamed at, honked at all while frantic trying to explain to the 911 operator that I needed a deputy to come and put his lights on behind my car to prevent an accident. My car sat in the middle of the highway with no warning lights on until a tow truck arrived. We then found out there is a way to release the gear and put it into neutral so we could push it to the side of the road. The car was towed to the house where I then had to have another tow truck come get it and tow it to the dealership where I was already waiting for a part. (Differential) At this point it has now been 8 days and I have no updates on what actually happened to my car but in my discovery I have read that this is a more common occurrence than not. Just while waiting in the Enterprise waiting room, waiting for my rental I met a girl with the same exact issue. How many others is this happening to and when will Ford recall this model car before someone is killed? I want answers and want to make sure when they say my car is fixed that it truly is fixed. I am scared to death to drive it now that I even have purchased road flares so I am ready for the next break down, because I truly believe it will happen again.
3FMCR9B[redacted]	11544129	09-08-2023	BRONCO SPORT	Davie	FORWARD COLLISION AVOIDANCE: AUTOMATIC EMERGENCY BRAKING	The contact rented a 2021 Ford Bronco Sport. The contact stated that while driving at approximately 30 MPH, the vehicle stopped unintendedly without the brake pedal being depressed. The vehicle then lost power and was not able to be restarted. The vehicle was towed to Enterprise Rental Car. The vehicle was not diagnosed or repaired. The manufacturer was notified of the failure. The failure mileage was 25,000.
3FMCR9B[redacted]	11544366	09-12-2023	BRONCO SPORT	Webb	ELECTRICAL SYSTEM	When trying to start the vehicle, it would not crank. Instead, all dash indicator lights, interior lights, and exterior lights began flashing. Numerous random error messages began flashing on the dashboard screen. Then a large plume of smoke began coming out from under the hood and there was an acrid burning smell. No flames were visible so the fire department would not respond when called and advised to have it towed. After much difficulty loading onto a tow truck (the parking brake would not disengage--dash indicated a parking brake fault as one of the many errors--so it had to be dragged onto the flatbed tow truck) the vehicle was towed to the local dealership in Dothan, AL. Per the dealership, there was an underhood fire involving the starter and battery. We are unable to inspect the damaged components. They stated they are unable to remedy the smoke smell that has permeated the vehicle despite the disabling lung conditions of one of our family members. We have tried numerous times over the last 9 months to get the dealership to perform service required by NHTSA Recall # 22V859, but they keep stating the parts are unavailable. They will not say whether this underhood fire is directly related to the recall already in effect.

3FMCR9C[redacted]	11546110	08-06-2022	BRONCO SPORT	Conroe	FORWARD COLLISION AVOIDANCE: AUTOMATIC EMERGENCY BRAKING	Around 08/22 backup camera failed and now there is a dent in the tailgate area. I have documentation from the dealership, finally that the backup camera was not working properly. On about May 23, 2023, I stopped at a local grocery store for just a few items. When I came back out my car would not even attempt to turn over (approx. 24,000 miles). Had to wait three hours for roadside assistance to use a jump box to get it started (would not jump-start like a normal vehicle). The next morning it was dead again, and I had to call an Uber to get my child to school, not acceptable. I took it to the dealership again, and after three days they replaced the battery.....I had not even owned the vehicle for two years, it had 6 miles on it when I bought it, and it needs a new battery? Now it is 09/22/23, the dealership has had my car since the morning of 09/13/23 and I still don't have it back. There are issues with the safety features (lane departure doesn't work, front crash assist goes off randomly, backup camera STILL doesn't work half of the time, keep hands on steering wheel alert when both hands are on steering wheel, key not detected alert after I've been driving and the key is with me, stereo still playing when I disconnect the phone and exit out of all music apps on phone it just still plays music even music that I have never listened to). There is more but I cannot remember all at the moment, and I don't have all of my records because they are with my car that I have not had in my possession in quite a while. DON'T BUY A BRONCO! BUY A JEEP!!!! That is what I have learned from this, my first and only Ford and I can't wait to go back to Mopar products. I have truly bought a lemon!

VIN	Manufacturer	Model	Model Year	State/Province	City	Component	Consumer Comments
3FMCR9A6[redacted]	FORD MOTOR COMPANY	BRONCO SPORT	2021	SC	Lexington	ELECTRICAL SYSTEM	I was on my way to work and as I approached a 4-way intersection, the auto-stop feature on the vehicle shut the engine off. The vehicle's instrument panel started blinking then went completely black. The vehicle became completely disabled... the hazard lights were only functioning intermittently. I tried to re-start the vehicle without success and was not able to shift to neutral. The vehicle was in the middle of the road, so I called a tow to carry it to the dealership. The dealership was able to replicate the issue and blamed it on a 'dead-cell' battery. The dealership even said that the vehicle did the same thing to them once their booster pack was removed, so a simple jump from another vehicle would not have temporarily solved the issue. Before the incident, the vehicle gave absolutely NO warning or indication that the battery levels were low. I cannot believe that with all of the modern vehicle technology available, Ford did not develop a 'low-battery' warning light for their vehicles. I expect Ford to pay for every tow needed in the future due to a dead battery that completely disables the vehicle in the middle of the street.
3FTTW8F9[redacted]	FORD MOTOR COMPANY	MAVERICK	2022	HI	Paia	ELECTRICAL SYSTEM	I was driving back home from errands and during a stop, the entire car suddenly powered off and became unresponsive. I couldn't even flash my hazards and was stuck in the middle of a busy intersection. Also couldn't put it in neutral since the gear shifter is electronically powered. Some bystanders tried to jump my car, but it took 6 solid tries before they could restore power. I drove it another 1000 ft, trying to head to a service center and this time it completely powered off while in motion. I had to fight with the steering wheel to pull it to the shoulder as the power steering went out and the car started making clicking noises. The entire car was completely dead, once again. A tow truck diagnosed the battery as still healthy and suspects a deeper electrical fault with the car. It has been towed to the dealer for service under warranty, but I am reading that I am not the only one with this issue. A lot of folks are getting battery swaps and having the issue recur later. Could this be a wiring harness fault, or a much more pervasive electrical issue? The entire episode was terrifying, and I could have gotten into a major accident if this was on a busier road.
3FTTW8F9[redacted]	FORD MOTOR COMPANY	MAVERICK	2022	AL	Prattville	ELECTRICAL SYSTEM	I pulled my 2022 Maverick into my parking spot at work and everything went dead. I had to use my key to open my tailgate. The tow service jumped the battery and it started, however, when they went to take it off the tow truck at the Ford dealership, it had to be jump started again. I was told the battery was bad and they changed it. The vehicle worked fine for three days and on the morning of the fourth day I had difficulty starting the vehicle. The first three times I turned the key all I heard was clicking and it started on the fourth try. I then drove it straight to the dealership where it has been for the past 8 days.
3FMCR9B6[redacted]	FORD MOTOR COMPANY	BRONCO SPORT	2021	FL	Gainesvile	ELECTRICAL SYSTEM	On Monday 7-24-2023 5:00pm rush hour in Downtown Gainesville Fl at a red light in the left lane about to turn left my car completely shutoff with no warning. It was if someone disconnected the battery completely from the car. No lights, No screen, No ignition. The traffic light turned green and I immediately pressed my foot on the brake and tried to start the engine. I noticed there were not lights, no sounds and no reaction from the engine. Windows would not go down either. I tried to put the hazards on to signal people and they had no power. The car was completely dead in the road. I jumped out of the drivers seat to warn people to go around me but traffic was whipping around me so I started to panic. I got back in the drivers seat to try and restart the car a few more times. I pressed the ignition and noticed the dash board and welcome screen flashing on and off repeatedly without success. I wanted to put the car in neutral. but the shiffter was stuck I drive and the emergency electric brake was engaged. After about 30 minutes the police came to direct traffic and he stayed with us for almost 2 hours while we waited for a tow truck. In the mean time we tried jumping the battery and for a split second the car lights on the inside all came on. Every light in the car lit up for a split second and then it totally died again. The wheels were locked so it had to be dragged onto a flat bed truck and taken to Parks Ford Gainesville. The next day I were told by Levin, a service technician at Parks Ford that he could not locate the issue but he called it a Catastrophic Fail and he had to call in a Master technician to look at my car and that would be the end of this week or beginning of next. This is a very dangerous thing.
3FMCR9B6[redacted]	FORD MOTOR COMPANY	BRONCO SPORT	2021	FL	Homosassa	ELECTRICAL SYSTEM	This vehicle is just two years old and has 38,000 miles. Meticulously maintained from day one. It is equipped with the start/stop feature. On July 8, 2023 when stopping for traffic at a U-turn lane on a heavy traveled highway the engine shut off and the entire vehicle went dead, leaving the car unable to re-start or move. Since there is no fail safe means of taking the vehicle out of gear (automatic transmission) it could not be moved out of harms way. The Hazard flashers also would not work due to the electrical failure. Emergency vehicles arrived and saved us from a rear end collision by blocking the lane of travel. Vehicle has an extended service plan and was towed to the nearest Ford dealer where a system check was performed and revealed that the battery had failed. According to the service adviser this is a common occurrence with the Bronco Sport model and they have anticipated a safety recall which has yet to be issued. The replacement of the battery at my expense corrected the problem. I wish to point out the fact that the failure of the battery in this model vehicle creates a highly dangerous situation which could lead to injuries or death. I can see no reason for the failure of the battery since it gave no indications of being in a low charge state. It merely failed without warning. The vehicle is not equipped with analog gauges so the state of charge is in no way indicated without selecting an onboard computer A.P. Again, this vehicle gave no indication of a problem before failing and leaving no means of getting it into neutral so that it could be safely removed from traffic.
3FTTW8E[redacted]	FORD MOTOR COMPANY	MAVERICK	2022	TX	League City	ELECTRICAL SYSTEM	Car electrical system was completely dead at only 9500 miles and required a jumpstart and battery replacement
3FTTW8E[redacted]	FORD MOTOR COMPANY	MAVERICK	2022	CA	Sunnyvale	ELECTRICAL SYSTEM	Total loss of electric power. There are no dashboard lights or indicators. There were no warning signs or indicators. The car drove fine to work but was dead by lunch time. Battery reads above 12V.

3FTTW8E3[redacted]	FORD MOTOR COMPANY	MAVERICK	2022	MD	Catonsville	ELECTRICAL SYSTEM	I was driving East on Rte 70 near Mt. Airy, MD at approximately 2 am the morning of Sunday, Oc. 11. at approximately 65 mph. In and instant all power to the vehicle went dead. The engine stopped and all electrical components went dead. Most importantly, my lights went out, the power steering was inoperable, and the brakes went out. It was absolutely terrifying. Because of the lack of brakes, I narrowly avoided colliding with an 18-wheeler. I was able to pull the car off the road on the right side and allow the vehicle to drift to a stop (again, no brakes) over the course of 1/4 - 1/2 mile. I called a tow truck. They towed the vehicle to Apple Ford in Columbia, MD. I am told by the Dealer that this most likely an issue with the battery wiring harness, and that Ford is aware of the issue. It's unfathomable to me that Ford would not issue a recall for this extraordinarily dangerous issue. I have contacted Ford directly. They have been nothing short of abusive. Their IVR phone system seems intentionally designed to confuse and frustrate callers. I have attempted to escalate the issue to a supervisor, given the extremely dangerous nature of the issue. The representatives and customer advocates in the Ford Customer Relations depaterment have not been helpful at all.

Two VINs I would like to know the Service History (at some point prior to their stall date, were these vehicles batteries physically removed for some service reason or procedure):

- MRA94091
- MRA90930

For these 2 VINs, customers reported they were able to start these vehicles "later" (e.g. 1.5hrs after stall incident).

Subject: 31 NHTSA claims

Team,
I went through the ODI report references from NHTSA and was able to link the complaint number to the VIN per what I extracted from the CIVIQ system. Please have a look. There are two NHTSA ODI#s that I still need to search to get the VIN numbers for.

In any case, these claims should be looked at for connected vehicle data, repair notes, and part of the root cause response summary. Thank you.

[redacted]	ODI/Source ID #	Incident Date	Model	City	Component	Consumer Comments
	11488542	10-08-2022	BRONCO SPORT	Kaufman	UNKNOWN OR OTHER	I was waiting to turn at a red light when the engine shut down and I lost all power including all lights and locking mechanisms. I was unable to get it off the road because it was locked in gear. It had to be towed and dropped off at the dealer. It is still there at this time.
	11504039	08-28-2021	BRONCO SPORT	Lindale	ELECTRICAL SYSTEM	Charging System The vehicle safety systems and monitoring systems shut down due to battery charging system failures. Problem confirmed by Ford engineers. And Ford service where the vehicle is still sitting. Vehicle has been at dealership 90% since 8/2022. They and Ford engineers do not know what's wrong or why it will not keep a charge. Battery replaced, alternator and more but it still is unsafe to drive. Have too many warnings to count. And we have taken it to dealer for repair but nothing fixes it. And even the Ford engineers do not understand why it fails.
	11506114	02-07-2023	BRONCO SPORT	Brookshire	ELECTRICAL SYSTEM	While driving the vehicle the warning system activated and the entire car shut down. I was stranded in an intersection of a busy street during a heavy traffic period. I was unable to start the vehicle, use my hazards, or put the car in neutral to push it to a safe location.
	11506164	02-07-2023	BRONCO SPORT	Rancho Cucamonga	ELECTRICAL SYSTEM	2nd time in a month this car has shut off completely while in motion. Both times in an intersection. No power to even turn on hazards to let traffic know I was stuck. Finally gets some power and hazards are able to come on but they are faulty and glitch, do not stay consistently on. Ford had no answers for me a month ago and just sent me home.
	11513866	03-25-2023	BRONCO SPORT	Scottsdale	ELECTRICAL SYSTEM	On 3/25/23, I was driving down a 40mph road. I had been stopped at a stoplight and as soon as I started to drive again, the car started moving forward and then completely shut down. The entire engine, all power (dashboard lights, display screen, everything). I panicked and went to go turn the caution lights on--they wouldn't work. As people behind me started honking, I tried to roll down my window to motion them on---the window wouldn't roll down. I had no choice but to open my car door, and stick my hand out to start waving people on behind me. Knowing this was a dangerous situation to be stuck in the middle of the road with no way for cars behind me to know I was stalled, I called 911. They transferred me to the local police department and within 10 minutes, an officer got behind me and turned his lights on to notify other cars to slow down and go around. After about 45 minutes of waiting for a tow truck, the police were getting concerned because of the continued safety risk. So they had another officer jump my car. That got it into the parking lot of a CVS, where it immediately died again. When it's dead, it tries to revive itself and periodically, lights will come on and start flickering. You then go to try to turn it on and are unable to. The latter situation has happened to me twice in the past (where it will not turn on, lights flicker, etc). However, in both of those former situations, my car was parked (once at my apartment complex and once at church) so there was not as much of a safety concern .However, for it to completely dead stop in the middle lane of an extremely busy road on a Saturday at 4:30p was extremely concerning. What is more concerning is that this car is <2 years old and should NOT be doing this. The 2 other times Ford has looked at this, they run diagnostic tests and say everything looks fine to us. As of right now, my car got towed to my Ford dealership and given today is a Sunday, I am awaiting their call on Monday.
	11514767	01-15-2023	BRONCO SPORT	Nuevo	ENGINE AND ENGINE COOLING	The contact owns a 2021 Ford Bronco Sport. The contact stated that while driving at an undisclosed speed, the vehicle lost motive power, stalled, and then failed to restart. The loss of power train message was displayed. The vehicle was towed to the local dealer where it was diagnosed that the battery and control module needed to be reprogrammed. The vehicle was repaired. The manufacturer was not contacted. Additionally, the contact received NHTSA Campaign Number: 22V859000 (Fuel System, Gasoline); however, the part to do the recall repair was not yet available. The local dealer was contacted. The contact stated that the manufacturer had exceeded a reasonable amount of time for the recall repair. The manufacturer was not made aware of the issue. VIN tool confirms parts not available. The failure mileage was approximately 3,500.

[redacted]	11522221	05-08-2023	BRONCO SPORT	San Benito	ENGINE	The contact owns a 2021 Ford Bronco Sport. The contact stated that while approaching a stop light, the vehicle stalled. The contact pushed the vehicle off the roadway. There were no warning lights illuminated. The vehicle was towed to the local dealer however, the mechanic was unable to determine the cause of the failure. The vehicle was not repaired. The manufacturer was contacted and referred him to the NHTSA Hotline and another dealer. The failure mileage was approximately 19,000.
	11532731	07-17-2023	BRONCO SPORT	Sacramento	ELECTRICAL SYSTEM	I was driving down a city street in Sacramento and the car just suddenly stopped- engine and everything was off. I could not get the car to turn back on. Emergency lights would not come on, it was if the entire electrical system was out. I was in the middle of the road, so needed to put hazards on to warn others and I could not. Cops came to place flares to warn other drivers after 35 minutes. No warning codes or anything to let me know what was happening. Having car towed. 10 minutes before tow truck arrived, vehicle started, so I was able to move it to a safer place. But the car was inoperable for about an hour and a half.
	11533264	07-15-2023	BRONCO SPORT	West Union	ELECTRICAL SYSTEM	The vehicle completely quit in heavy traffic. There were no warning signs, nothing, just completely dead. I had no option to put on hazard lights etc. Had this happened on the interstate, it would have been incredibly dangerous. It was still unsettling traveling home with others which included an 11 year-old. The police helped us get it started with a jump-box but on the way home it started to bonk out again which included a message regarding the system shutting down. I got home where the vehicle started lighting up and then it was dead yet again. A major safety issue. The vehicle has only 32K miles on it - a 2021. Ridiculous.
	11538770	08-13-2023	BRONCO SPORT	North Hollywood	ELECTRICAL SYSTEM	On 2 occasions, 7/30/23 and 8/13/23, my 2021 Bronco suddenly stopped working with no warning whatsoever. I had no way to put on any Emergency Flashers because there was no power. The same day as the first incident, the car was brought to my local Ford Dealer and they couldn't find any problem. When they inspected it the next morning, it started right up.I had been driving the car for 2 weeks and it happened while I was driving again on 8/13/23. It died the exact same way, with no warning and no way for me to alert other drivers around me. My vehicle is currently at the Ford Service Department and they are trying to find the problem.
	11538977	08-09-2023	BRONCO SPORT	Key Largo	ELECTRICAL SYSTEM	I currently am at 14,000 miles on my2021 Bronco Sport. I have had no issues prior to what happened to me on August 9th. While I was at a light my car went completely black with no warning and I was not able to put on hazard lights or put it in neutral to get off the busy highway. I had to call 911 as cars were zipping up close to mine and I was only able to wave my arms to get them to see my car was unoccupied. I was screamed at, honked at all while frantic trying to explain to the 911 operator that I needed a deputy to come and put his lights on behind my car to prevent an accident. My car sat in the middle of the highway with no warning lights on until a tow truck arrived. We then found out there is a way to release the gear and put it into neutral so we could push it to the side of the road. The car was towed to the house where I then had to have another tow truck come get it and tow it to the dealership where i was already waiting for a part. (Differential) At this point it has now been 8 days and i have no updates on what actually happened to my car but in my discovery I have read that this is a more common occurrence than not. Just while waiting in the Enterprise waiting room, waiting for my rental I met a girl with the same exact issue. How many others is this happening to and when will Ford recall this model car before someone is killed? I want answers and want to make sure when they say my car is fixed that it truly is fixed. I am scared to death to drive it now that I even have purchased road flares so I am ready for the next break down, because I truly believe it will happen again.
	11544129	09-08-2023	BRONCO SPORT	Davie	FORWARD COLLISION AVOIDANCE: AUTOMATIC EMERGENCY BRAKING	The contact rented a 2021 Ford Bronco Sport. The contact stated that while driving at approximately 30 MPH, the vehicle stopped unintendedly without the brake pedal being depressed. The vehicle then lost power and was not able to be restarted. The vehicle was towed to Enterprise Rental Car. The vehicle was not diagnosed or repaired. The manufacturer was notified of the failure. The failure mileage was 25,000.

3FMCR9	[redacted]	11544366	09-12-2023	BRONCO SPORT	Webb	ELECTRICAL SYSTEM	When trying to start the vehicle, it would not crank. Instead, all dash indicator lights, interior lights, and exterior lights began flashing. Numerous random error messages began flashing on the dashboard screen. Then a large plume of smoke began coming out from under the hood and there was an acrid burning smell. No flames were visible so the fire department would not respond when called and advised to have it towed. After much difficulty loading onto a tow truck (the parking brake would not disengage--dash indicated a parking brake fault as one of the many errors--so it had to be dragged onto the flatbed tow truck) the vehicle was towed to the local dealership in Dothan, AL. Per the dealership, there was an underhood fire involving the starter and battery. We are unable to inspect the damaged components. They stated they are unable to remedy the smoke smell that has permeated the vehicle despite the disabling lung conditions of one of our family members. We have tried numerous times over the last 9 months to get the dealership to perform service required by NHTSA Recall # 22V859, but they keep stating the parts are unavailable. They will not say whether this underhood fire is directly related to the recall already in effect.
3FMCR9	[redacted]	11546110	08-06-2022	BRONCO SPORT	Conroe	FORWARD COLLISION AVOIDANCE: AUTOMATIC EMERGENCY BRAKING	Around 08/22 backup camera failed and now there is a dent in the tailgate area. I have documentation from the dealership, finally that the backup camera was not working properly. On about May 23, 2023, I stopped at a local grocery store for just a few items. When I came back out my car would not even attempt to turn over (approx. 24,000 miles). Had to wait three hours for roadside assistance to use a jump box to get it started (would not jump-start like a normal vehicle). The next morning it was dead again, and I had to call an Uber to get my child to school, not acceptable. I took it to the dealership again, and after three days they replaced the battery.....I had not even owned the vehicle for two years, it had 6 miles on it when I bought it, and it needs a new battery? Now it is 09/22/23, the dealership has had my car since the morning of 09/13/23 and I still don't have it back. There are issues with the safety features (lane departure doesn't work, front crash assist goes off randomly, backup camera STILL doesn't work half of the time, keep hands on steering wheel alert when both hands are on steering wheel, key not detected alert after I've been driving and the key is with me, stereo still playing when I disconnect the phone and exit out of all music apps on phone it just still plays music even music that I have never listened to). There is more but I cannot remember it all at the moment, and I don't have all of my records because they are with my car that I have not had in my possession in quite a while. DON'T BUY A BRONCO! BUY A JEEP!!!! That is what I have learned from this, my first and only Ford and I can't wait to go back to Mopar products. I have truly bought a lemon!

VIN	Manufacturer	Model	Model Year	State/Province	City	Component	Consumer Comments
3FMCR9A	FORD MOTOR COMPANY	BRONCO SPORT	2021	SC	Lexington	ELECTRICAL SYSTEM	I was on my way to work and as I approached a 4-way intersection, the auto-stop feature on the vehicle shut the engine off. The vehicle's instrument panel started blinking then went completely black. The vehicle became completely disabled... the hazard lights were only functioning intermittently. I tried to re-start the vehicle without success and was not able to shift to neutral. The vehicle was in the middle of the road, so I called a tow to carry it to the dealership. The dealership was able to replicate the issue and blamed it on a 'dead-calf battery. The dealership even said that the vehicle did the same thing to the monce their booster pack was removed, so a simple jump from another vehicle would not have temporarily solved the issue. Before the incident, the vehicle gave absolutely NO warning or indication that the battery levels were low. I cannot believe that with all of the modern vehicle technology available, Ford did not develop a 'low-battery' warning light for their vehicles. I expect Ford to pay for every tow needed in the future due to a dead battery that completely disables the vehicle in the middle of the street.
3FTTW8F	FORD MOTOR COMPANY	MAVERICK	2022	HI	Paia	ELECTRICAL SYSTEM	I was driving back home from errands and during a stop, the entire car suddenly powered off and became unresponsive. I couldn't even flash my hazards and was stuck in the middle of a busy intersection. Also couldn't put it in neutral since the gear shifter is electronically powered. Some bystanders tried to jump my car, but it took 6 solid tries before they could restore power. I drove it another 1000 ft, trying to head to a service center and this time it completely powered off while in motion. I had to fight with the steering wheel to pull it to the shoulder as the power steering went out and the car started making clicking noises. The entire car was completely dead, once again. A tow truck diagnosed the battery as still healthy and suspects a deeper electrical fault with the car. It has been towed to the dealer for service under warranty, but I am reading that I am not the only one with this issue. A lot of folks are getting battery swaps and having the issue recur later. Could this be a wiring harness fault, or a much more pervasive electrical issue? The entire episode was terrifying, and I could have gotten into a major accident if this was on a busier road.
3FTTW8F	FORD MOTOR COMPANY	MAVERICK	2022	AL	Prattville	ELECTRICAL SYSTEM	I pulled my 2022 Maverick into my parking spot at work and everything went dead. I had to use my key to open my tailgate. The tow service jumped the battery and it started, however, when they went to take it off the tow truck at the Ford dealership, it had to be jump started again. I was told the battery was bad and they changed it. The vehicle worked fine for three days and on the morning of the fourth day I had difficulty starting the vehicle. The first three times I turned the key all I heard was clicking and it started on the fourth try. I then drove it straight to the dealership where it has been for the past 8 days.
3FMCR9B	FORD MOTOR COMPANY	BRONCO SPORT	2021	FL	Gainesville	ELECTRICAL SYSTEM	On Monday 7-24-2023 5:00pm rush hour in Downtown Gainesville Fl at a red light in the left lane about to turn left my car completely shutoff with no warning. It was if someone disconnected the battery completely from the car. No lights, No screen, No ignition. The traffic light turned green and I immediately pressed my foot on the brake and tried to start the engine. I noticed there were not lights, no sounds and no reaction from the engine. Windows would not go down either. I tried too put the hazards on to signal people and they had no power. The car was completely dead in the road. I jumped out of the drivers seat to warn people to go around me but traffic was whipping around me so I started to panic. I got back in the drivers seat to try and restart the car a few more times. I pressed the ignition and noticed the dash board and welcome screen flashing on and off repeatedly without success. I wanted to put the car in neutral, but the shifter was stuck I drive and the emergency electric brake was engaged. After about 30 minutes the police came to direct traffic and he stayed with us for almost 2 hours while we waited for a tow truck. In the mean time we tried jumping the battery and for a split second the car lights on the inside all came on. Every light in the car lit up for a split second and then it totally died again. The wheels were locked so it had to be dragged onto a flat bed truck and taken to Parks Ford Gainesville. The next day I were told by Levin, a service technician at Parks Ford that he could not locate the issue but he called it a Catastrophic Fail and he had to call in a Master technician to look at my car and that would be the end of this week or beginning of next. This is a very dangerous thing.
3FMCR9B	FORD MOTOR COMPANY	BRONCO SPORT	2021	FL	Homosassa	ELECTRICAL SYSTEM	This vehicle is just two years old and has 38,000 miles. Meticulously maintained from day one. It is equipped with the start/stop feature. On July 8, 2023 when stopping for traffic at a U-turn lane on a heavy traveled highway the engine shut off and the entire vehicle went dead, leaving the car unable to re-start or move. Since there is no fail safe means of taking the vehicle out of gear (automatic transmission) it could not be moved out of harms way. The Hazard flashers also would not work due to the electrical failure. Emergency vehicles arrived and saved us from a rear end collision by blocking the lane of travel. Vehicle has an extended service plan and was towed to the nearest Ford dealer where a system check was performed and revealed that the battery had failed. According to the service adviser this is a common occurrence with the Bronco Sport model and they have anticipated a safety recall which has yet to be issued. The replacement of the battery at my expense corrected the problem. I wish to point out the fact that the failure of the battery in this model vehicle creates a highly dangerous situation which could lead to injuries or death. I can see no reason for the failure of the battery since it gave no indications of being in a low charge state. It merely failed without warning. The vehicle is not equipped with analog gauges so the state of charge is in no way indicated without selecting an onboard computer AP. Again, this vehicle gave no indication of a problem before failing and leaving no means of getting it into neutral so that it could be safely removed from traffic.
3FTTW8E	FORD MOTOR COMPANY	MAVERICK	2022	TX	League City	ELECTRICAL SYSTEM	Car electrical system was completely dead at only 9500 miles and required a jumpstart and battery replacement
3FTTW8E	FORD MOTOR COMPANY	MAVERICK	2022	CA	Sunnyvale	ELECTRICAL SYSTEM	Total loss of electric power. There are no dashboard lights or indicators. There were no warning signs or indicators. The car drove fine to work but was dead by lunch time. Battery reads above 12V.
3FTTW8E	FORD MOTOR COMPANY	MAVERICK	2022	MD	Catonsville	ELECTRICAL SYSTEM	I was driving East on Rte 70 near Mt. Airy, MD at approximately 2 am the morning of Sunday, Oc. 11. at approximately 65 mph. In and instant all power to the vehicle went dead. The engine stopped and all electrical components went dead. Most importantly, my lights went out, the power steering was inoperable, and the brakes went out. It was absolutely terrifying. Because of the lack of brakes, I narrowly avoided colliding with an 18-wheeler. I was able to pull the car off the road on the right side and allow the vehicle to drift to a stop (again, no brakes) over the course of 1/4 - 1/2 mile. I called a tow truck. They towed the vehicle to Apple Ford in Columbia, MD. I am told by the Dealer that this most likely an issue with the battery wiring harness, and that Ford is aware of the issue. It's unfathomable to me that Ford would not issue a recall for this extraordinarily dangerous issue. I have contacted Ford directly. They have been nothing short of abusive. Their IVR phone system seems intentionally designed to confuse and frustrate callers. I have attempted to escalate the issue to a supervisor, given the extremely dangerous nature of the issue. The representatives and customer advocates in the Ford Customer Relations depatement have not been helpful at all.

Subject: 2021-2022 Bronco Sport Warranty Search Help - Electrical Symptoms
Attachments: 2021-2023 Bronco Sport VOQs_Possible LOMP_17-Oct-2023.xlsx

Hi Tom, REDACTED FOR PRIVILEGE

[redacted]

My 2021 Bronco failed our family on Friday. The Bronco failed to start upon pressing the start and brake pedal. The main console panel started flashing then cycling through all kinds of failure alerts. There was a series loud noises from the engine, the headlights flashed off and on for over 3 minutes and then the engine started smoking. The doors would not open and we were stuck inside while the engine was smoking. That smoke came through the air vents as well. Finally, I was able to get my door open though couldn't open my son's rear passenger side door from the outside. He was stuck inside for what seemed like forever. He was able to open it finally and I carried him inside. My son's legs are paralyzed and he does not walk. My main concern was getting him to a safe place as I was scared to death that the engine was going to explode in that moment. The engine smoke started to ease up however the electrical burning smell was overwhelming. This all took place in my garage. The trunk would not unlock and my key fob would not engage with the vehicle at all during this time. The trunk hatch lock finally disengaged and I was finally able to get his wheelchair out. Everything failed. I could not get the Bronco into neutral at any point.

I pulled VOQs for 2021-2023 Bronco Sport and marked some in the attachment as potentially responsive for similar allegations. (Please see Col AD of the "Deduped" tab). I did not see any potentially responsive reports for 2023MY, only 2021-2022.

As requested at detections, we were asked to search for warranty claims with similar combinations of symptoms. Could you please consider these VOQs and think about an organized CDR search to provide the warranty detail requested? I hope as you consider these that patterns/trends emerge that could help target the search.

Once we have the summary, we can plan to share the summary with both the BCM team (also as requested, I believe I have contacts) and with CCRG at an upcoming detections meeting.

After you've considered the scope, let's discuss time estimate to complete.

Thanks and please let me know if you'd like to discuss.

Best Regards,
Travis Henney
Automotive Safety Office-Senior Safety Engineer
