Ravi –

Thank you for the update. I reviewed this vehicle and it was repaired by replacing the starter motor, no 12V battery or electrical system issues found.

Regards,
Michael Clark

Subject: RE: MY21 Bronco Sport - Loss of Power investigation

Right, I filtered on those but many of these comments mention being at a stop light or stop sign which supports the theory of the issue occurring during an auto start/stop.

I thought I had heard someone mention there were a smaller number of reports occurring while the vehicle was in motion with a speed greater than 0. Was hoping we might already have a list of these occurrences to review, but if not I will continue looking through the file available.

Thanks,
Mike

Subject: RE: MY21 Bronco Sport - Loss of Power investigation

Hi Sarra,

Thank you for the data and for all the material you shared previously. It's a lot of information, but very helpful.

With so many of these claims noting that the vehicle was stopped or in an auto start/stop event and the technician comments stating the battery test failed, I think the team is already on the right track in understanding a majority of these reported failures.

Going through the full list of claims, I have only seen a few that had other issues noted that could potentially explain a loss of power while the engine was running (alternator replacements and loose cable connections to the alternator or battery post).

Was there already a short list prepared of certain VINs or claims where the loss of power was reported to occur while in motion? I'm wondering if there are any details in the customer/technician comments or any other information we can find out about those specific VINs that could help identify other potential causes.

Thanks,
Mike

Subject: MY21 Bronco Sport - Loss of Power investigation

Hi Michael, Jorge,

Thank you for your support in this investigation. Back in November 2023 NHTSA contacted Ford and shared customer complaints regarding loss of motive power while driving. The team started to investigate and look at the MY21 Bronco Sport, Escape and Maverick warranty claims and read through the customer complaints. One observation is that Bronco Sport warranty claims are at a higher frequency than Escape and that one difference is that Bronco Sport uses an EFB and Escape uses an AGM battery. Also the majority of failures are occurring in hot weather states.

The team is still looking to get parts back for teardown and conduct testing to recreate the failure mode. In the meantime you both have been recommended to support in the root cause investigation from a vehicle system integration standpoint. Since the file is too large I included the link to the recent warranty claims for Bronco Sport and Escape so that you can read through the customer comments. There may be some details that help steer the direction of the investigation.

Main tab with all the data is labeled 'CDRReport' and the customer comments are in column BL. I filtered the data to look at claims in US, MY21, Bronco Sport and Escape. The search criteria I used for warranty claim search is on the tab 'Search Criteria-Disclaimer' . I went through the claims and categorized for no crank/no start/batt dead and then for when a customer says they lost power while driving. Please have a look and we can discuss more at the next 14D meeting.

[redacted]

Kind Regards,

Sarra Yako

Subject: RE: Power Loss- Bronco Sport 12V Battery

Miguel,
Can you order a few HTIS (24 to 36 month) batteries with similar Customer Comments to be shipped to Cross and Black?

Many of these state that the vehicle died at the stop light.
The customer descriptions in MY21 Filtered Claims, column BL,:

> Row 17: CUSTOMER STATES VEHICLE SHUT OFF AT STOP LIGHT WITH AUTO START STOP FEATURE AND WOULD NOT START BACK UP. VEHICLE WENT COMPLETELY DEAD WITH THE DASH AND LIGHTS NOT ILLUMINATING. CUSTOMER WAS ABLE TO JUMP VEHICLE BUT AS SOON AS IT IS SHUT OFF THE VEHICLE WILL NOT START BACK UP WITHOUT JUMP.
> Row 19: CUSTOMER STATES WHILE STOPPED AT STOP LIGHT ALLLIGHTS ON DASH CAME ON AND ENGINE STALLED. STARTSTOP BUTTON BEGAN BLINKING. EV ENTUALLYEVERYTHING WENT BLACK.
> Row 24: C/S THAT VEHICLE DIED AT STOPLIGHT YESTERDAY (5/14) AND HAD NO POWER AT ALL, NOT EVEN HAZARD LIGHTS. VEHICLE TOWED IN.

- Kurt Kilian

Subject: CX430_21-23MY_VEHICLES VOLUME/C31 REPAIRS

Hello Gordon,

Find the vehicle volume & C31 repairs per state on CX430, the power point has a couple of plots I could do, but Excel files contain the full data to get a better view.
I'm also attaching two Excel files with fireworks charts for CX430 by Engine and Trim level only 21MY as per requested by Kurt.
Let me know if would be useful to have also 22 and 23MY compared.

Let me know if this data is useful or if I should look for any further information.

Bryan Zamora
ESE Power Supply
Warranty Analyst
