

Question 18:

18. Furnish Thor's assessment of safety recall 23V351, including how it is similar to this investigation, how it differs from this investigation, and explain any conversations that you've had with the supplier concerning that recall.

Response:

TMC only has access to the publicly available information to evaluate recall 23V-351, which was issued by the REV Group. As a result, it can only assess that information.

Similarities include:

- The recall focuses on a hitch receiver manufactured by Lippert Components.

Differences include:

- The failure mode of the REV recall appears to be different from the failure mode of the TMC subject vehicles. The failure on the REV recall is with the hitch receiver portion and not the mounting brackets.

TMC has had no conversations with the REV Group or Lippert Components regarding recall 23V-351.
