Clune Electric >

No damage. Shows that the circuit works normally when the charger (green indicator light) works and only has an issue when car is plugged in

Ok so when the car is plugged in, it is causing the damage ?

Something on the load side, in this case the car, seems to be causing the circuit to malfunction

Thanks, I had feeling that was the case. Jeep didn't want to hear it.

And the load side would mean when it is plugged in and charging correct ?

Yes. In this case the vehicle would be the load on the circuit.

And it's causing a circuit malfunction

Crazy

That's what it looks like
