Dear Isuzu Ascender Owner:

This notice is sent to you in accordance with the requirements of the National Traffic and Motor Vehicle Safety Act.

WHAT IS THE CONDITION

The manufacturer General Motors has decided that a defect which relates to motor vehicle safety exists in certain 2003 Ascender vehicles that have ever been registered in corrosion areas. The rear side doors on these vehicles may not latch or may not unlatch properly due to corrosion caused by road splash, such as water and road salt. Depending on the location of the corrosion in the latch, the door may either be difficult to open from the inside or outside, or may bounce back when the door is swung shut from the outside. The driver information center may or may not indicate that the door is ajar. If the door is not latched properly and it goes unnoticed, it may open while the vehicle is in motion. If the occupant is unbelted, they may fall out of the vehicle and personal injury could occur.

WHAT WE WILL DO

To correct this condition, your Isuzu dealer will install a seal to prevent water intrusion into the latch. The latch will also be inspected and replaced if necessary. This service will be performed for you at **no charge**.
