Collins Bus Corporation Recall # 05V011 Inspection And Repair Procedure

1. Locate the fuel sender access plate in the bus floor above the Ford fuel tank. Remove the cover plate. This will provide access for inspection and repair.

2. Locate the fuel lines drawing fuel from the top of the Ford fuel tank. Follow these lines forward as they pass near the steel structure under the bus floor.

3. Inspect the steel structure near the fuel lines for the presence of protective rubber parts. Use this drawing to determine if the protective rubber parts are installed, missing, or improperly installed.

4. If rubber parts are missing or improperly installed, this must be corrected. Install the protective rubber parts, or "pinchwelt", over any exposed metal edges with which the flexible fuel lines may come into contact. The pinchwelt will simply snap over the metal edges and requires no tools for installation. Install these parts as shown on the attached drawing. Contact Collins Bus Customer Service to obtain the protective rubber parts.

5. Carefully inspect the fuel lines in areas which may have come into contact with metal edges. If the fuel lines are damaged, the fuel lines must be replaced. If you do not feel you have the proper tools or expertise to replace the fuel lines, you may opt to take the vehicle to a local Ford dealer.

6. Should you have questions or require assistance, please contact Collins Bus Corporation Customer Service at 1-800-533-1850.
