RE: Recall 06V298

Dear Ms. Timian:

As you requested, this letter outlines the issues encountered during the validation process concerning the repair parts needed for Recall 06V298 and the timing of those events.

1. At the beginning of November, 2006 the first design of the cushion drive failed to meet Polaris' internal durability goals during on-road testing.
2. A new design was developed and on-road testing began in mid November, 2006.
3. Towards the end of December 2006 it was determined that this design did not yet meet Polaris' internal durability goals.
4. At the beginning of January, 2007 Polaris consulted with a company that had significant experience with cush drive design and application.
5. In February of 2007 this company presented Polaris with a completed cushion drive design.
6. Prototype parts for this latest design were received in March of 2007 and testing began.
7. At the beginning of April, 2007 the new design had passed phase one testing programs.
8. By the beginning of May, 2007 all testing was completed and the new design had proved to work as intended and had met all durability specifications.
9. By the middle of May, 2007 parts were available for dealers to order.

Thank You,

Don Good
