(8 pages)

Mr. Daniel C. Smith
Associate Administrator for Safety Assurance
National Highway Traffic Safety Administration
400 Seventh Street, S.W.
Washington, DC 20590

Dear Mr. Smith:

Subject: Ford Recall No. 07S50 -- Certain 2008 model year F-250/350/450/550 Trucks with 6.4L Diesel Engines

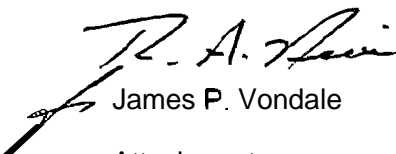

Summary

Ford Action -- Ford is conducting a voluntary safety recall involving certain 2008 model year F-250/350/450/550 6.4L diesel engine trucks to examine the location of the positive (B+) battery wire near the lower splash shield and if necessary reposition the wire.

- Number of Vehicles Involved -- Approximately 1,022 vehicles in the United States and Federalized Territories.
- Affect on Vehicle Operation -- Insufficient clearance of the battery positive (B+) wire to the right hand splash shield bolt may result in the battery B+ wire contact with the splash shield bolt. Long term contact may cause wire chafe, resulting in copper wire being exposed, if this condition occurs, the battery B+ wire could short to ground. Ford is not aware of any melting or shorting incidents related to this condition on vehicles in service. However, past similar conditions have shown the potential for fire. In an abundance of caution, Ford is proceeding with an inspection and, if necessary, repositioning of the battery B+ wire.
- Service Procedure -- Owners will be instructed to take their vehicles to a Ford or Lincoln/Mercury dealer to have the battery B+ wire location inspected and if necessary repositioned.

Attached is the detailed information required by the applicable portions of 49 CFR Part 573 - Defect and Noncompliance Report.

Sincerely,

James P. Vondale

49 CFR Part 573 - DEFECT INFORMATION REPORT
Ford Recall No. 07S50 - Certain 2008 Model Year
F-250/350/450/550 Trucks with 6.4L Diesel Engine

Pursuant to Part 573 of Title 49 of the Code of Federal Regulations, Defect and Noncompliance Reports, Ford Motor Company submits the following information concerning a safety recall action that it is voluntarily initiating.

573.6 (c) (2) - Potentially Affected Vehicles

Vehicles potentially affected are certain 2008 model year F-250/350/450/550 vehicles with 6.4L diesel engines built from December 18, 2006 through January 28, 2007 at the Kentucky Truck Plant.

Although Ford vehicles are not produced in VIN order, and we typically cannot provide VIN specific information, in this instance Ford is able to provide the specific VIN list - see Attachment II.

573.6 (c) (3) - Estimated Population of Vehicles Potentially Affected

Approximately 1,022 vehicles in the United States and Federalized Territories.

573.6 (c) (4) - Estimated Percentage of Affected Vehicles with the Defect Condition,

Unknown

573.6 (c) (5) - Description of the Defect

Insufficient clearance of the battery positive (B+) wire to the right hand splash shield bolt may result in the battery B+ wire contact with the splash shield bolt. Long term contact may cause wire chafe, resulting in copper wire being exposed. If this condition occurs, the battery B+ wire could short to ground. Ford is not aware of any melting or shorting incidents related to this condition on vehicles in service. However, past similar conditions have shown the potential for fire. In an abundance of caution, Ford is proceeding with an inspection and, if necessary, repositioning of the battery B+ wire.

573.6 (c) (6) - Chronology of Events

On January 23, 2007 engineering reviewed a 2008 F-250 test vehicle that had completed structural durability testing. The review found the battery B+ wire had contact with the right hand splash shield attachment bolt. Further examination of the parts showed that the B+ wire had been chafed with no signs of a short or electrical arcing. Engineering continued their investigation to determine the cause of the contact, which included a field study and review of the assembly process. On March 2, 2007 engineering reported to the Ford Critical Concern Review Group (CCRG).

On March 19, 2007, a Technical Review Committee (TRC) was held to review field and engineering investigation data.

On March 23, 2007, a special Field Review Committee approved a field action.

573.6 (c) (8) - Service Program

Owners will be instructed to take their vehicles to a Ford or Lincoln/Mercury dealer to have the battery B+ wire location inspected and, if necessary, repositioned. There will be no charge to owners for this service.

Mailing of owner notification letters will begin March 30, 2007 and be completed on March 30, 2007. A copy of the notification letters to dealers and owners from Ford will be forwarded to the agency when available.

In accordance with Part 573.13 (d)(1), Ford is excluding reimbursement for costs incurred by owners for repair of this problem because Ford's original warranty program would provide for a free repair for this concern for customers.

573.6 (c) (9) - Press statement and Dealer/Owner Letters

Ford does plan to make a statement to the media concerning the subject matter of this action.

573.6 (c) (1) - Recall Number

Ford has assigned recall number 07S50 to this action.
