Ref: Kalmar Ottawa Models 30, 50, 60T, 4x2 DOT/EPA and 6x4 DOT/EPA

Gentlemen:

We are writing to advise that Kalmar Trailer Handling of Kalmar Industries Corp. has determined that a safety related defect exists in it's models Ottawa 30, 50, and 60, and Ottawa 4x2 DOT/EPA and Ottawa 6x4 DOT/EPA vehicles manufactured between September 26, 2006 and August 27, 2007.

Pursuant to 49 CFR 573.6 C the following information is provided:

Manufacturer's Name:

Kalmar Trailer Handling, Kalmar Industries Corp.

Identification of motor vehicle and defect:

The affected vehicles are the models Ottawa 30, 50, 60T, 4x2 DOT/EPA and 6x4 DOT/EPA terminal tractors manufactured between September 26, 2006 and August 27, 2007.

Total number of vehicles potentially containing this defect:

915

Description of the defect:

The defect is in the heater/defroster duct routing under the dash panel in the cab. The heater/defrost duct material has a steel reinforcing spiral molded into the flexible material used to form a 2 1/2 " diameter hose routing hot or cold air to outlet receptacles in the cab. If the ducting is not properly routed and secured, unexpected chaffing of the hose material with steel spiral reinforcement against electrical connectors may cause an electrical short, resulting in a spark and potential fire.

Chronology of events that was the basis for determination that the defect related to motor vehicle safety:

DATE	EVENT
July 5, 2007	Customer reported a warranty claim incident where the Heater/AC duct chaffed and shorted out the low-air buzzer under the dash.
August 17, 2007	Kalmar production line in Ottawa MAU reported an incident where the Heater/AC duct chaffed against a power stud on the firewall, causing smoke and a fire.
August 20, 2007	Director of Engineering was informed by Kalmar Quality Assurance manager of production line incident, who in turned reported to the Management Team. Director of Engineering requested Customer Service to search the warranty files for similar incidents of vehicles in field service.
August 28, 2007	Engineering requested Purchasing to immediately acquire heater/AC duct hose with non-metallic reinforcement and instigated an immediate production line change to reflect the material change.
August 29, 2007	Quality Assurance confiscated the current stock of heater/AC duct with steel spiral reinforcement so as to not allow installation on any production vehicles.
October 17, 2007	Information gathered by Customer Service department and presented to Director of Engineering and Kalmar Legal department indicated that 6 other incidents since January 1, 2007 on Off-Highway vehicles may have similar circumstances.
November 13, 2007	Director of Engineering met with other Kalmar officials and it was determined that a potential defect exists and, thus, the notification to NHTSA should occur.

Based on this information and our in-house incident, it was determined that certain trucks produced from September 26, 2006 through August 27, 2007 may have been manufactured incorrectly. Therefore, our enclosed list is of those units.

Enclosed is a copy of the notification letter that will be sent to all customers shown on our listing. In the cases where the customer is not known, the letter will be sent to the selling dealer. Notification shall begin upon receipt of confirmation from your office with a recall campaign ID number. Expected time frame to initiate notification is December 3, 2007 and should be complete by December 21, 2007.

This notification letter has been sent to the Office of Defect Investigation for your review.

This notice is for your information only. We do not feel that the situation requires action on the part of NHTSA. Kalmar does feel that it is our duty to correct the situation and will send the required parts to correct the situation when the customer determines the defect is existing on their vehicle. Kalmar Industries, Corp. will persist in it's communications with customers to assure these vehicles are appropriately repaired.

Thank you for your attention concerning this matter. If you have questions, or if we can provide additional information, please contact us.

Sincerely

A handwritten signature in black ink, appearing to read 'Keith Pfannenstiel', written over a horizontal line.

Keith Pfannenstiel, P.E.

Dear Customer:

This notice is sent to you in accordance with the requirements of the National Traffic and Motor Vehicle Safety Act.

Kalmar Trailer Handling of Kalmar Industries Corp. has decided that certain models Ottawa 30, 50, and 60T, and Ottawa 4x2 DOT/EPA, and 6x4 DOT/EPA manufactured between September 26, 2006 and August 27, 2007 may contain a potential safety related defect. It has been determined that if the heater/AC duct under the dash was not properly routed or secured, chaffing may occur, exposing the steel spiral reinforcement. If this reinforcement is contacted with an electrical power connector, such as the power stud on the firewall, it may cause an electrical short resulting in a spark and potential fire. This may result in significant property damage.

The defect is in the Heater/AC hose ducting, which may have steel spiral reinforcing and or improper routing or securement away from electrical connectors.

Instructions on how to inspect your vehicle for the presence of the defective heater/AC hose duct and the measure to take to remedy this defect if it exists is provided with this letter.

If after inspection, you determine that your vehicle has the improper Heater/AC hose, you should contact the Kalmar Customer Service Department at 785-229-6327. We will provide you with replacement Heater/AC hose. We ask that you perform this inspection and any required repairs without delay and then return the attached confirmation form.

If you prefer, you can contact your local Kalmar Ottawa Dealer to have them perform the inspection and any necessary repairs.

Kalmar will reimburse (.5 hours) labor per unit to perform this inspection, and a total of (2.5 hours) if it is necessary to remedy the situation. Labor claims should be submitted to Kalmar Trailer Handling Customer Service for payment. All claims for reimbursement must include documentation for labor hours and travel (if any) and a completed confirmation of repair form (enclosed). If you have any questions regarding this repair, contact your Kalmar-Ottawa Dealer or Kalmar-Ottawa Customer Service Department at (785) 229-6327.

Kalmar Industries Corp.

Ottawa Serial Number _____

VIN _____

Date Repair Performed _____

On the above date, I, _____ (name) performed the repairs on the above listed serial number in accordance with the Kalmar Industries Corp. letter dated November 21, 2007, regarding the Heater / AC Duct hose per the procedures supplied. I tested the unit upon completion of the repair for proper operation.

Signed: _____

Print Name: _____

PROCEDURE FOR IDENTIFYING AND REPLACING METALLIC REINFORCED HEATER & AIR CONDITIONING FLEXIBLE DUCTING

1. Locate the flexible ducting that is attached to the blower motor assembly and diffuser ball that is mounted under the dash. See figure 1.
2. Locate the flexible ducting that is attached to the blower motor assembly and diffuser ball that is mounted in the engine gauge and warning panel. See figure 2.
3. Using a magnet, touch along the ridge of the flexible ducting's reinforcement. Be sure to test both pieces. If the magnet does not stick, then you already have the non-metallic reinforced ducting and no change is necessary. If the magnet does stick, then contact Kalmar Customer Service to request the non-metallic reinforced ducting and continue to step 4.
4. Remove the ducting from the blower motor assembly by removing the retaining clamps and pulling on the ducting. Retain clamps.
5. Remove the ducting from each of the diffuser balls by holding the diffuser ball and pulling on the ducting. Do not discard yet.
6. Using the old ducting, removed in step 5, as templates cut the new non-metallic reinforced ducting to length. Now discard the old ducting.
7. Install the new non-metallic reinforced ducting by pushing it on to the diffuser balls.
8. Slide the clamps, removed in step 4, over the ducting.
9. Install the new ducting onto the blower assembly by pushing it on and then slide the clamps into place and tighten.
