

Mack Trucks, Inc.

Safety Recall ALERT

Date: August 16, 2007 **Number:** SRA-533-006
To: All U.S. & Canadian Distributors
Attention: Service Manager, Warranty Manager, Parts Manager, Dealer Principal
From: Regulatory Affairs Department
Subject: Safety Recall, SC0328, SR7™ Spring Brake Modulating Valve

Safety Recall Summary:

On certain Mack model vehicles manufactured from November 2005 through May 2007, Bendix has determined that a manufacturing defect exists in the internal rubber check valves inside the SR-7™ spring brake modulating valve. The internal check valve rubber can become deformed over time and can potentially result in the check valve not properly seating. The resulting leakage can cause a delay in the application of the spring brakes (i.e. park brakes) when the driver applies the park brakes.

The number of vehicles affected is approximately 24,003 (19,548 US; 1,833 Canada; 2,622 Export).

Dealer's Responsibility:

The National Traffic and Motor Vehicle Safety Act and Canadian Motor Vehicle Safety Act requires dealers to ensure that all new and used vehicles are free of safety defects and comply with all relevant safety standards at the time of delivery to the consumer.

Dealers should make their personnel aware of the safety recall. In the event that a dealer has a vehicle included in the safety recall in their inventory to be sold, the condition must be corrected before releasing it to a customer.

Release Schedule:

- Repair Instructions are tentatively scheduled for release no later than September 21, 2007.
- Vehicle list is tentatively scheduled to be posted on the Trucks Dealer Portal August 24, 2007.
- Owner Notices are scheduled to be mailed on or before October 1, 2007.

Questions:

Contact the Regulatory Affairs Department at vtna.regulatoryaffairs@volvo.com if you have questions.
