Dear Toyota Scion Owner or Lessee:

This notice is sent to you in accordance with the requirements of the National Highway Traffic and Motor Vehicle Safety Act.

Southeast Toyota Distributors, LLC. has determined that a defect which relates to motor vehicle safety exists in certain 2006 and 2007 Toyota Scion Models xA and xB which are equipped with a cruise control unit which was manufactured from September 1, 2006 to January 15, 2007.

What is the problem?

On occasion, while the cruise control is engaged, if the cruise control "On/Off" switch is pressed once, the throttle does not return to idle. When the "On/Off" switch is pressed a second time, the throttle will return to idle.

In the worst case, An accident could be caused in the event that the cruise control does not allow the engine to return to idle on the first depression of the "On/Off" switch.

To avoid the risk of accident, do not use the cruise control on your car until it has been checked and, if necessary, replaced.

The safety devices built into the cruise control unit will, however, still disengage the throttle if the driver steps on the brake while the cruise control is still "on".
