RECALL MGMT DIV.

The nature of the defect is that some refrigerators have boiler tubes that may develop a fatigue crack. The consequences of the defect could be leaking pressurized coolant solution into an area where an ignition source may be present. If this were to occur under certain conditions, the coolant could ignite and result in a fire.

R-Vision is not currently aware of any casualties or losses related to this issue.

573.5(c)(8)

The remedy provided by Dometic Corporation will involve a rework for the potential defect at no charge for parts or labor. Dometic Corporation will be conducting the recall campaign on behalf of the Company and reporting quarterly reports to NHTSA.

Respectfully,
