Date: April 10, 2008

Subject: Upcoming Safety Recall 07273
Window Regulator Bolts

Models: 2003-2004 Pontiac Vibe Equipped with Power Windows

To: All Pontiac Dealers

Attention: Dealer Operator, General Manager, Sales Manager, Service Manager, Used Car Manager, Parts Manager and Warranty Administrator

Based on information from the National Highway Traffic Safety Administration (NHTSA) website, the media may report that General Motors will be announcing a safety recall involving all 2003-2004 model year Pontiac Vibe vehicles equipped with power windows.

On some of these vehicles, bolts in the front door that attach the window to the window regulator may begin to loosen, resulting in a popping or clicking sound when the window is operated. If either bolt continues to loosen and separates from the window regulator, the glass may shatter during window operation.

To correct this condition, dealers are to replace the window regulator bolts in both front doors.

A total number of 122,593 vehicles are involved. Based on expected parts availability, GM anticipates releasing the recall bulletin and mailing customer notification letters in late May 2008.

GMVIS information will not be available for this recall until the recall bulletin is released to dealers.
