Safety Recall

ALERT

Date: April 15, 2008 **Number:** SRA-533-009
To: All U.S. & Canadian Distributors
Attention: Service Manager, Warranty Manager, Parts Manager, Dealer Principal
From: Regulatory Affairs Department
Subject: Safety Recall, SC0339, Bendix MV-3™ Dash Control Valve.

Safety Recall Summary:

On certain Mack model vehicles manufactured from January 2008 through February 2008, Bendix has determined that a manufacturing defect exists in MV-3™ valve bodies manufactured by a supplier. The supplier of the molded valve body used an incorrect core pin in the injection mold, causing the valve body to be oversized in the double check valve seat area. The oversize condition can allow the rubber double check valve to become lodged in the body opening under certain circumstances. If the double check valve becomes lodged, in the event of a primary reservoir failure, air pressure can leak past the lodged double check valve thereby depleting the secondary reservoir, causing a reduced ability for modulating the emergency brakes.

The number of vehicles affected is approximately 66 (34 US, 15 Canada and 17 Export).

Dealer's Responsibility:

The National Traffic and Motor Vehicle Safety Act and Canadian Motor Vehicle Safety Act requires dealers to ensure that all new and used vehicles are free of safety defects and comply with all relevant safety standards at the time of delivery to the consumer.

Dealers should make their personnel aware of the safety recall. In the event that a dealer has a vehicle included in the safety recall in their inventory to be sold, the condition must be corrected before releasing it to a customer.

Release Schedule:

- Repair Instructions are tentatively scheduled for release no later than May 2, 2008.
- Vehicle list is tentatively scheduled to be posted on the Trucks Dealer Portal April 15, 2008.
- Owner Notices are scheduled to be mailed on or before May 9, 2008.
