[Alexander,](#)

We have been working together with VCC in this matter and we have also delivered the needed spare parts for the action mentioned in the letter attached. Our estimations is that VCC will be able to rebuild most of the cars with new unit and new location of it.

The unit is a unique product to VCC so no other car manufacturer is receiving such a component/ECU.

I hope that this information answers your open point.

Subject: NHTSA Recall# 08V-033

Andre,

Hello. Pertaining to Volvo's defect filing 08V-033, did Bosch sell these PEMs to any other vehicle manufacturer that imports their vehicles into the United States?

The referenced recall documentation is provided.

Thank you,
Alex Ansley
