

Safety Defect and Noncompliance Report Guide for Vehicles
PART 573 Defect and Noncompliance Responsibility and Reports (1)

On August 31st, 2009, Glaval Bus in conjunction with Luminator Holding, LP [MFR] decided that a defect which relates to motor vehicle safety exists in the motor vehicles listed below, and is furnishing notification to the National Highway Traffic Safety Administration in accordance with 49 CFR Part 573 Defect and Noncompliance Responsibility and Reports.

Date this report was prepared: **October 26th, 2009.**

Furnish the manufacturer's identification code for this recall (if applicable):
CAGE Code 17744

1. Identify the full corporate name of the fabrication manufacturer of the vehicle being recalled. If the recalled vehicle is imported, provide the name and mailing address of the designated agent as prescribed by 49 U.S.C. §30164.

Glaval Bus, A Division Of Forest River, Inc.

Identify the corporate official, by name and title, whom the agency should contact with respect to this recall.

Rob Froelich; Design Engineer

Telephone Number: **(574) 262-2212 ext. 3665** Fax Number: **(574) 264-9036**

Name and Title of Person who prepared this report:

Rob Froelich
Design Engineer

Signed:

Each manufacturer must furnish a report, to the Associate Administrator for Enforcement, for each defect or noncompliance condition which relates to motor vehicle safety.

This guide was developed from 49 CFR Part 573, "Defect and Noncompliance Responsibility and Reports" and also outlines information currently requested. Any questions, please consult the complete Part 573 or contact Mr. George Person at (202) 366-5210 or by FAX at (202) 366-7882.

RECEIVED
2009 OCT 28 A 3:48
OFFICE OF DEFECTS
AND NONCOMPLIANCE

I. Identify the Vehicle Models Involved in the Recall

2. Identify the Vehicles Involved in the Recall, for each make and model or applicable vehicle line (provide illustrations or photographs as necessary to describe the vehicle), provide:

****Please see attached documentation labeled "Supplement Documentation"****

Make(s): _____ Model Years Involved: _____ Model(s): _____
Production Dates: Beginning _____ Ending: _____
VIN Range: Beginning: _____ Ending: _____
Vehicle Type: _____ Body style: _____
Descriptive information which characterizes/distinguishes the recalled vehicles from those model vehicles not included in the recall:

Make(s): _____ Model Years Involved: _____ Model(s): _____
Production Dates: Beginning _____ Ending: _____
VIN Range: Beginning: _____ Ending: _____
Vehicle Type: _____ Body style: _____
Descriptive information which characterizes/distinguishes the recalled vehicles from those model vehicles not included in the recall:

Make(s): _____ Model Years Involved: _____ Model(s): _____
Production Dates: Beginning _____ Ending: _____
VIN Range: Beginning: _____ Ending: _____
Vehicle Type: _____ Body style: _____
Descriptive information which characterizes/distinguishes the recalled vehicles from those model vehicles not included in the recall:

Identify the approximate percentage of the production of all the recalled models manufactured by your company between the inclusive dates of manufacture provided above, that the recalled model population represents. For example, if the recall involved Widgets equipped with certain items of equipment from January 1, 1996 through April 1, 1997, then what was the percentage of the recalled Widgets of all Widgets manufactured during that time period.

Vehicles produced during recall timeline: 6,732

Vehicles involved in recall: 161 USA; 10 Canada – Total Of 171 Units

Percentage of recalled vehicles vs. produced: 2.392% (US ONLY)

II. Identify the Recall Population

3. Furnish the total number of vehicles recalled potentially containing the defect or noncompliance.

Vehicles Model	Year	Number of Potentially Involved:
-------------------	------	------------------------------------

****Please see attached documentation labeled "Supplement Documentation" ****

Total Number Potentially Affected by the Recall: 161

4. Furnish the approximate percentage of the total number of vehicles estimated to actually contain the defect or noncompliance: 100%

Identify and describe how the recall population was determined -- in particular how the recalled models were selected and the basis for the beginning and final dates of manufacture of the recalled vehicles:

Luminator Holding, LP sent us the make, model and part numbers of the signs to be identified in this recall. We (Glaval) then searched through our manual files (for 2001) and electronic files (from 2002 on) to link the signs to the buses.

III. Describe the Defect or Noncompliance

5. Describe the defect or noncompliance. The description should address the nature and physical location of the defect or noncompliance. Illustrations should be provided as appropriate.

Signs involved in this recall are equipped with the 506746 connector board that is used to "daisy chain" the side destination sign to other signs in the sign system. When there is no rear sign, or there are multiple side signs, one connector is left uncovered by the missing cable. This creates an open connector condition that allows debris to collect inside the connector and provides a path for moisture to ingress along the pins of the connector down to the PWA board itself causing corrosion on the solder connection between the open connector and PWA board. The corrosion allows for a conductive path between battery voltage and ground. This corrosion will allow a potential short and the sign will fail. In rare instances, this corrosion will cause the sign to smoke and possibly flame. The photos below (taken from the sample population) show the impact of the corrosion on the board itself after the connector barrel has been removed.

Corrosion starting on battery voltage pin

Corrosion advanced to a conductive condition

Describe the cause(s) of the defect or noncompliance condition.

Accumulation of moisture under the connector. None of the connectors which have a cable attached to them show any sign of corrosion. The base of the connector is too close to the board to effectively coat the solder connections with conformal coating (a corrosion preventative). This corrosion creates the conductive path between battery voltage and ground pins. Certain cleaning practices, (i.e. spraying water and cleaning agents) used at the Transit Authorities facilities introduces more moisture into the connector and increases the likelihood of the corrosion.

Describe the consequence(s) of the defect or noncompliance condition.

This corrosion will allow a potential short and the sign will fail. In rare instances, this corrosion will cause the sign to smoke and possibly flame.

Identify any warning which can (a) precede or (b) occur.

In some situations the circuit breaker will trip. This is not a consistent occurrence.

If the defect or noncompliance is in a component or assembly purchased from a supplier, identify the supplier by corporate name and address.

Luminator Holding , LP

900 Klein Road, Plano, Texas 75074

Identify the name and title of the chief executive officer or knowledgeable representative of the supplier:

David Major, Controller

IV. Provide the Chronology in Determining the Defect/Noncompliance

If the recall is for a defect, complete item 6, otherwise item 7.

6. With respect to a defect, furnish a chronological summary (including dates) of all the principle events that were the basis for the determination of the defect. The

summary should include, but not be limited to, the number of reports, accidents, injuries, fatalities, and warranty claims.

The following events lead to the identification of the root cause. Each event occurred on a bus without a rear sign and with a single open connector on the side destination sign.

1. Thermal Event Atlanta, MARTA, January, 2006 (smoke and fire, sign destroyed, unable to determine root cause)
 2. Thermal Event Atlanta, MARTA, December, 2008 (smoke only, sign intact, partial root cause identified)
 3. Electrical Event Richmond, January, 2009 (smoke only, tripped breaker 3 times then failed)
 4. Thermal Event, St. Louis, June, 2009 (smoke only, root cause fully determined)
 5. Thermal Event, MARTA, Atlanta, August, 2009 (smoke and fire, sign destroyed, fleet replacement completed 08/21/09)
7. With respect to a noncompliance, identify and provide the test results or other data (in chronological order and including dates) on which the noncompliance was determined.

V. Identify the Remedy

8. A description of the manufacturer's program for remedying the defect or noncompliance. This program shall include a plan for reimbursing an owner or purchaser who incurred costs to obtain a remedy for the problem addressed by the recall within a reasonable time in advance of the manufacturer's notification of owners, purchasers and dealers, in accordance with §573.13 of this part. A manufacturer's plan may incorporate by reference a general reimbursement plan it previously submitted to NHTSA, together with information specific to the individual recall. Information required by §573.13 that is not in a general reimbursement plan shall be submitted in the manufacturer's report to NHTSA under this section. If a manufacturer submits one or more general reimbursement plans, the manufacturer shall update each plan every two years, in accordance with §573.13. The manufacturer's remedy program and reimbursement plans will be available for inspection by the public at NHTSA headquarters.

On all buses built in 2007 or older the connector board will be replaced with a newly designed board. The new board eliminates the possibility of arcing by putting the ground and battery voltage on separate layers of the board. The traces have also been moved to allow the maximum spacing. In addition conformal coating has been applied below the connector and a cap is installed on all open connectors to prevent the incursion of moisture and debris which would allow corrosion to develop. On all buses built since 2008, there has been no evidence of corrosion. By cleaning the connector with a moisture displacing corrosion inhibitor and subsequently capping the open connector with a vinyl cap, the conditions that allow the moisture to ingress and produce the corrosion will be eliminated.

9. Clearly describe the distinguishing characteristics of the remedy component/assembly versus the recalled component/assembly.
1. New Connector Board, part number 508331-001 (replaces 506746-001, see Appendix 2 for drawings).

2. Ground and power on two separate layers of PWA.
3. Traces are more widely spaced.
4. Connector assembled to the board with a gap so the conformal coating can be applied to the connector solder joints.

Identify and describe how and when the recall condition was corrected in production. If the production remedy was identical to the recall remedy in the field, so state. If the product was discontinued, so state.

Since May of 2009, all signs built by Luminator have been shipped with a vinyl cap covering all connectors. These caps are to remain in place unless a cable is attached to the connector. The connector board change has gone in effect as of 09/20/2009.

VI. Identify the Recall Schedule

10. Furnish a schedule or agenda (with specific dates) for notification to other manufacturers, dealers/retailers, and purchasers. Please, identify any foreseeable problems with implementing the recall.

Glaval plans to mail the end users and dealers the week of November 2nd, 2009, dependant upon approval of "End User Letter" submitted to NHTSA with this document.

11. Furnish Recall Communications

12. Furnish a final copy of all notices, bulletins, and other communications that relate directly to the defect or noncompliance and which are sent to more than one manufacturer, distributor, or purchaser. This includes all communications (including both original and follow-up) concerning this recall from the time your company determines the defect or noncompliance condition on, not just the initial notification. *A DRAFT copy of the notification documents should be submitted to this office by Fax (202-366-7882) for review prior to mailing.*

Note that these documents are to be submitted separately from those provided in accordance with Part 579.5 requirements.

We have not made any attempt to communicate with the dealers/end user's to date without approval of our end user letter from NHTSA.

**GLAVAL/LUMINATOR RECALL 09E-054**

Models Involved: Easy On, Concorde, Universal, Primetime, Apollo and Titan

Model Years: 2001 Through 2009

Produced from January 1st, 2001 through September 30th, 2009.
