Date: May 2011

Subject: Upcoming Campaign Revision – Extension to Safety Recall 20L8

Dear Audi Dealer Principal, Service Manager, and Parts Manager:

This is to inform you that Audi has notified the NHTSA of an extension to the voluntary safety recall campaign 20L8 regarding potential fuel leaks in some 2001-2004 model years Audi A6, 2002-2003 model years Audi S6 and 2003 model year RS6 vehicles with 4.2L engines.

What is the problem?

The aging of the plastic material in the fuel tank rollover valve – combined with bending stress from the ventilation line to the rollover valve nipple – may lead to cracking of the nipple. If this happens, a fuel leak may result. A fuel leak in the presence of an ignition source could lead to a vehicle fire.

What does the repair procedure involve?

To prevent or repair cracking at the nipple, dealers will reinforce the nipple on the rollover valve on the affected vehicles at no cost to customers. Audi expects that dealer notification will take place in or about June 2011. Customer notification will take place in June, 2011.

Parts Allocation Information

You will receive an initial allocation of parts for this campaign prior to the initiation of this safety recall.

As always, any press/media related questions should be directed to the Audi public relations team.

Any customers with questions unable to be answered by this announcement should be directed to Audi Customer CARE at (800) 253-2834.

Thank you for your cooperation and assistance in this important matter.
