C&B Quality Trailer Works Inc.

Head of recalls: Road Safety & Motor Vehicle Reg (Transport Canada)

To Whom It May Concern:

We are writing to you to bring you to the knowledge of an issue with one of our trailer models. Our company has been brought to the awareness of an issue with one of our trailer models that we want to submit for recall status.

The issue lies on a small grouping of stock trailers (trailers intended for livestock transport), in both the bumper pull, and gooseneck variety, with the rear gate of said trailers. The gate design of said trailers was developed to close in a fashion that doesn't require the operator to maneuver any type of handle or catch, latching upon the closing of the gate/door (similar to a car/truck door when pushed closed).

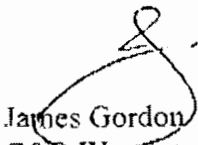

Said stock trailers have a release located on the outside, driver side, wall accessible from within the trailer, through the openings in the side walls. It has come to our awareness that some people are not able to operate the exterior release handle from within the trailer, through the openings in the sides of the trailer walls, due to misc factors (e.g. arm length). We believe that some users within said trailers, would not be able to open the rear gate/door once closed and inside.

We have developed a measure to be taken to remedy said defect and have already started forwarding it to our dealer network in which the trailers were sold. As well, we are developing the recall letter for the owners, as well as the cover letter (I.E. cover letter words of "SAFETY," "RECALL," & "NOTICE," as well as all the required statements of description and measures/repairs).

Our company is also putting together a list of all the trailers in accordance to their VIN, dealer through which it was distributed, and if sold, the owner. This list will be attached in accordance to your requirements.

We would like to point out the fact that said defect does not pose a danger to owners/users pulling said trailers in proper legal use, or to other motorists. The defect only affects operation of the rear door and the correlation to where the user is located (i.e. inside the trailer).

Respectfully,

James Gordon
C&B Warranty Dept.
