Recall Number and Description: 13S01 - 3rd Row Seat Latch Striker Corrosion Repair

What is the Issue?

If your vehicle is operated in high corrosion areas for an extended period (where salt is used on the roadways during winter months), it is possible that the sheet metal that supports the folding 3rd row seat latches could corrode and compromise the forward mounting point of the 3rd row seat. The seat belts and the permanent mounting attachment at the rear of the seat are unaffected. Initially, this condition may result in seat movement when passengers sit on or put weight on the seat, or difficulty latching the seat in the seating position. As the corrosion progresses, the seat latch strikers may become detached from the vehicle and the 3rd row seat may not fully latch into its seating position. In the event of an impact to the rear of the vehicle, an unlatched seat may increase the risk of personal injury.

What Are We Asking You To Do?
