URGENT SAFETY RECALL NOTICE

WHY DOES MY [2004] [GSX-R750] NEED REPAIR?

After a long-term service life of the motorcycle without changing the brake fluid, the brake fluid can deteriorate and absorb moisture. The brake piston inside the front brake master cylinder of some motorcycles may not have uniform surface treatment. This combination of conditions can lead to corrosion of the brake piston. Corrosion of the brake piston generates gas, which may not be adequately purged from the master cylinder due to the side position location of the reservoir port. Gas remaining in the master cylinder can affect braking power by reducing proper fluid pressure transmission to the front brake. Over time, as gas continues to slowly accumulate above the reservoir port, the front brake lever may develop a “spongy” feel and stopping distances may be extended, increasing the risk of crash.

SUZUKI WILL REPAIR YOUR VEHICLE FREE OF CHARGE (PARTS AND LABOR).

Your dealer will replace the front master cylinder and flush hydraulic system of old brake fluid. The brake hydraulic system will then be refilled with fresh brake fluid and bled to remove any air. This procedure will take approximately two hours to complete. Parts are available now, and there will be no charge to you for any recall service-related parts or labor.

HOW DO I SCHEDULE MY FREE REPAIR?

YOUR BEST OPTION

Simply call your Suzuki Recall Resolution Specialist at

1-855-215-5335

Monday through Friday, 8 AM to 7 PM EST and we'll get you scheduled for this free repair at a time that is most convenient for you.

or...

Call your Suzuki dealer directly to schedule a service appointment.
