Ms. Nancy Lummen Lewis Associate Administrator for Enforcement National Highway Traffic Safety Administration 1200 New Jersey Ave. S.E. Washington, D.C. 20590

Re: Roush Performance Products, Inc.; Defect Information Report

Dear Ms. Lewis:

Roush Performance Products, Inc. ("Roush"), has decided to conduct a voluntary safety recall of certain vehicles that are equipped with Roush CleanTech Propane Autogas Fuel System conversion kits ("Kits") as original equipment. Roush has determined that some of these vehicles may contain a safety defect because of the potential, in severe environments, for galvanic corrosion of the aluminum fuel line fitting where it contacts the brass supply valve housing on the fuel tank. Roush's Defect Information Report is enclosed.

If you have any questions about this report, please contact me at gary.jurick@roush.com, or by telephone at (734) 466-6242.

Sincerely,

Gary Jurick, Vice President & General Manager

Enclosure

DEFECT INFORMATION REPORT

1. Manufacturer's name/address:

Roush Performance Products, Inc. ("Roush") 12445 Levan Road Livonia, Michigan 48150

2. Vehicles involved in this defect notification:

Vehicles that are equipped with ROUSH CleanTech Propane Autogas Fuel System conversion kits ("Kits") as original equipment.

The Kits were supplied by:

Roush CleanTech, LLC ("CleanTech") 12170 Globe Street Livonia, Michigan 48150 Phone: (734) 779-7786

The vehicles covered by this report were manufactured between October 2010 through December 2013. This date range is based on information received from CleanTech regarding which Kits are covered by its defect determination in Recall 14E-035.

3. Total number of vehicles covered by this recall:

Thirty-seven (37)

4. Approximate percentage of vehicles estimated to actually contain the defect:

Unknown.

5. Description of the defect:

CleanTech has informed Roush that in severe environments, the aluminum fuel line fitting in the Kits can experience galvanic corrosion where it contacts the brass supply valve housing on the fuel tank. See Recall 14E-035. This could result in a leak of the propane fuel, which could lead to a fire.

6. Chronological summary of events leading to this determination:

In June 2014, CleanTech informed Roush that it had decided that certain Kits contain a safety-related defect. Although Roush is not aware of any fires or other adverse safety consequences associated with this problem in the vehicles built by Roush, under the circumstances, Roush has decided to undertake this recall of vehicles equipped with those kits as a cautionary measure.

7. Program for remedying the defect (including program for reimbursement, if applicable):

Roush will notify the owners of all vehicles covered by this report in order to arrange for the free replacement of the existing aluminum fuel line fittings with a new stainless steel fittings. The repairs will be performed at no charge to the vehicle owners. A draft of the owner notification letter will be provided for your review when it is available.

As all affected vehicles are still under warranty, the owner notification letter will not include information about potential reimbursement.

8. Schedule for Customer Notification:

To be determined.
