Description of Defect :

Description of the Defect : Toyota Motor Engineering & Manufacturing (Toyota) is recalling certain model year 2008-2014 FJ Cruiser, and Tacoma vehicles. The affected vehicle may have been manufactured with incorrect spare tire size and/or cold tire inflation information on the placard. Thus, these vehicles fail to comply with the Federal Motor Vehicle Safety Standards No. 110, "Tire Selection and Rims for Passenger Cars."

Description of the Safety Risk : If the occupant inflates the tire to the incorrect pressure marked on the placard it could increase the risk of a vehicle crash.

Chronology :

In June 2014, a port technical engineer identified a discrepancy between the replaced tire placard on the B-Pillar and the actual original spare tire installed on a 2014 MY Tacoma equipped with TMS accessory wheels and tires. Toyota began an investigation and found that the size and/or the cold tire pressure specified for the spare tire on the placard was incorrect for the involved vehicles. As a result of the investigation, it was determined on July 29, 2014 that the tire placard used when TMS accessory wheels and tires were placed on vehicles prior to first sale did not meet the requirements of S4.3 of FMVSS 110.

Description of Remedy :

Description of Remedy Program : For the involved vehicles, overlay stickers to correct the tire placard will either be mailed to owners or provided to dealers for placement over the incorrect information on the placard. The owner letter will instruct vehicle owners who have paid to have this condition remedied prior to this campaign to seek reimbursement pursuant to Toyota's General Reimbursement Plan. Owners may contact Toyota customer service at 1-800-331-4331.
