ATTN: DEALER PRINCIPAL, GENERAL MANAGER, SERVICE MANAGER & PARTS MANAGER

SUBJECT: POWER WINDOW-VENT SWITCH SAFETY RECALL - ADVANCED COMMUNICATION

The following advanced information is being provided in the event you receive customer inquiries. We will communicate the timing of the Safety Recall dealer instructions for replacement of the power window-vent switches through the normal channels of communication through DMail and DealerCONNECT. Thank you for assisting with handling inquiries, and we are working to provide information, updates, and instructions as quickly as possible.

Statement: Power Window-Vent Switch

Chrysler Group is replacing window switches in an estimated 780,000 minivans equipped with third-row power window vents following incidents of overheating.

Chrysler Group is unaware of any related injuries or accidents. Affected customers will be contacted directly and advised when they may schedule service. Associated costs will be borne by the Company.

In the interim, customers may visit their dealers after May 14 and have the vent switches disconnected. This will eliminate any risks associated with the issue and affects only third-row window-vent operation.

Alerted by warranty data, Chrysler Group engineers launched an investigation and found a link between short circuits and beverage spills on the vent switch, as well as direct exposure to moisture from rain, snow, or car washes.

Short circuits may cause overheating. However, known incidents total 36 – less than 0.005 percent of the vehicles subject to this campaign.

Affected are certain model-year 2010-2014 Dodge Grand Caravan and Chrysler Town & Country minivans, assembled between August 25, 2010 and October 31, 2013. An estimated 644,850 are in the U.S.; 106,980 are in Canada; 8,009 are in Mexico, and 20,638 vehicles are outside the NAFTA region.

Customers who are concerned may call **1-800-853-1403**.
