## **New Safety Recall Advanced Communication – P23050614**

Chrysler Group LLC (Chrysler) announced a safety recall on certain 2013 and 2014 model year (FF) Fiat 500 Battery Electric Vehicles (BEV).

Some Fiat 500 Battery Electric Vehicles have a Power Inverter Module (PIM) that may contain cooling plates that leak coolant into areas of high voltage circuitry. This can result in an overcurrent electrical condition, which will cause the high voltage battery manual service disconnect fuse to open. An open high voltage battery manual service disconnect fuse will cause a loss of vehicle propulsion without warning.

Chrysler will conduct a voluntary safety recall on all involved vehicles to replace the Power Inverter Module on all involved vehicles.

Dealers will be notified of the launch of this safety recall by way of established methods used in the past.

We ask that you please take the time to ensure that your personnel are aware of this communication and are prepared to execute a customer friendly process for inquiries on involved vehicles.
