November 12, 2014

On [REDACTED] you purchased two truck bodies from PJ's Truck Bodies & Equipment that could possibly have a problem with the Muncie Power Products pressure switch.

Muncie Power Products, has sent out a letter which I have attached detailing that there could possibly be a problem with the pressure switch diaphragm and it could become brittle depending on the equipment operation and time in service. If the diaphragm becomes brittle, the transmission fluid could seep thru construction screw thread on the side of the switch, and could possibly cause a fire.

The replacement parts are available in a kit form to relocate the switch with an alternative diaphragm and tube assembly, supplied by Muncie, at no cost to your customer.

We have called a couple of times and left a voice mail for the title clerk requesting the end users names and address. Since we do not have access to whom these trucks were sold, I am sending this letter to you in hopes that we can obtain this information and advise the customer of the problem. The VIN numbers in question are [REDACTED] and [REDACTED].

Thank you for your prompt attention in this matter.

Pamela G. Faircloth
