**Recall Number and Description:** 14S10 - Right-Hand Front Halfshaft Retention Inspection/Repair

**What is the Issue?** On your vehicle, it may be possible that the right-hand halfshaft was not fully inserted on the intermediate shaft during assembly. A halfshaft that is not fully seated may move outward over time, which can result in noise, vibration, damage to the part, and/or halfshaft disengagement from the intermediate shaft. If the two shafts fully disengage, the halfshaft will no longer transmit torque to the wheel, and the vehicle will experience loss of drive function. Additionally, if the two shafts are disengaged, unexpected vehicle movement may occur if the gearshift lever is placed in the "Park" position without the park brake being applied, increasing the risk of a crash.
