Recall Number and Description: **14C08 - Front Passenger Safety Belt Buckle Replacement**

What is the Issue? On your vehicle, the belt tension sensor in the front passenger safety belt buckle may not have been calibrated, which can result in the misclassification of the front passenger seat occupant (e.g., a child-sized occupant may be classified as an adult, or an adult-sized occupant may be classified as a child). Misclassification of the front passenger seat occupant does not meet the requirements of FMVSS 208. This potentially increases the risk of injury in certain crashes.

Recall Number and Description: **15S19 - Fuel Tank, Vapor Line, and Parking Brake Cable Heat Shielding**

What is the Issue? On your vehicle, it may be possible for the underbody temperature to exceed design limits under certain driving conditions. If the fuel tank and vapor lines are exposed to elevated temperatures for a prolonged period of time, they may develop a fuel or vapor leak. A fuel leak in the presence of an ignition source can lead to a fire. If the parking brake cables are exposed to elevated temperatures for a prolonged period of time, the parking brake may not engage or disengage correctly, and may fail to hold the vehicle on a hill. As a result, the vehicle may move unexpectedly, which may increase the risk of injury.

What Are We Asking You To Do?

Please contact your dealer to schedule an appointment to have these important service procedures completed. If you do not already have a servicing dealer, you can access www.Fordowner.com for dealer addresses, maps and driving instructions.

The vehicle owner is responsible for having these service actions performed. Ford Motor Company reserves the right to deny coverage for any vehicle damage that may result from failure to have these recalls performed on a timely basis. Therefore, please have this recall performed as soon as possible.
