Recall Number 14C09 - Stoplamp Switch Adjustment and Description:

What is the Issue? On your vehicle, it may be possible the stoplamp switch was installed incorrectly. This may result in a delay in stoplamp illumination when the brake pedal is depressed. Additionally, the AdvanceTrac warning light may illuminate. In situations of light brake application, the brake stoplamps may not illuminate. The delay or loss of brake stoplamp function may increase the risk of a crash.

Because you may have to press harder than normal on the brake pedal to disengage cruise control, we recommend you not use the cruise control system until this recall is completed.

Recall Number 14C10 - Seat Frame Clearance Adjustment and Description:

What is the Issue? On your vehicle, reduced clearance between the front passenger seat frame and adjacent seat track may cause the Occupant Classification System to inaccurately register the weight of a passenger. This may result in non-deployment of the passenger airbag when an adult occupant is present. Non-deployment of an airbag could increase the risk of injury in certain crashes. As always, Ford strongly recommends all occupants wear their seat belts.

What Are We Asking You To Do?

Please contact your dealer to schedule an appointment to have these important service procedures completed. If you do not already have a servicing dealer, you can access www.Fordowner.com for dealer addresses, maps and driving instructions.

The vehicle owner is responsible for having these service actions performed. Ford Motor Company reserves the right to deny coverage for any vehicle damage that may result from failure to have these recalls performed on a timely basis. Therefore, please have this recall performed as soon as possible.
