IMPORTANT SAFETY RECALL

THIS NOTICE APPLIES TO YOUR VEHICLE(S) LISTED AT THE END OF THIS NOTIFICATION LETTER

Dear Cat Product Owner:

This notice is sent to you in accordance with the National Traffic and Motor Vehicle Safety Act. Caterpillar has decided that a defect which relates to motor vehicle safety exists on some Caterpillar 2015 CT660 and CT681 On-Highway Trucks equipped with certain brake actuators.

You may have received a letter dated February 12, 2015 regarding this matter. Since then, additional affected vehicles have been identified.

Certain Haldex Life Seal Type 30/30 Long Stroke Air Brake Actuators manufactured January 9, 2014, to October 28, 2014 may be defective. The affected actuators may have an incomplete attachment of the internal rubber diaphragm to the actuation mechanism of the parking brake section of the Life Seal actuator. If the diaphragm is not completely attached, there may be internal leakage from the service section past the diaphragm, potentially trapping air pressure in the parking brake section. This air pressure in turn, if not vented, may prevent full release of the actuator unit, and may induce brake drag and may result in overheated wheelend service brakes. Vehicle drivers may notice overheated wheel ends during pre or post-trip walk-around inspections. Mechanics may notice overheated wheel ends during routine or periodic maintenance. This increases the risk of a fire and may result in smoke and thermal damage to the vehicle as well as possible injury to persons outside the vehicle.

Components necessary for the remedy are not available at this time. When available, Caterpillar will issue another notice to you.
