New Safety Recall Advanced Communication – R09022415

FCA US LLC announced a safety recall on certain 2011 model year and all 2012 and 2013 model year (WD/WK) Dodge Durango and Jeep Grand Cherokee vehicles.

Some of the above vehicles may experience a failure in the electric fuel pump relay located within the Totally Integrated Power Module-7 (TIPM-7). A vehicle with a failed fuel pump relay may intermittently or permanently:

- not start.
- not start on the first attempt.
- not stay running upon startup.
- cause the engine to stall while driving.
- cause the electric fuel pump to remain energized after vehicle shutdown.

Chrysler will conduct a voluntary safety recall on all involved vehicles to install a standalone external electric fuel pump relay.

Dealers will be notified of the launch of this safety recall by way of established methods used in the past.

We ask that you please take the time to ensure that your personnel are aware of this communication and are prepared to execute a customer friendly process for inquiries on involved vehicles.
