New Safety Recall Advanced Communication – R27061715

FCA US LLC announced a safety recall on certain 2014 and 2015 model year (KL) Jeep Cherokee vehicles.

Some of the above vehicles may experience a corrosion induced high resistance short circuit in the power liftgate control module electrical connector(s). The power liftgate control module electrical connector(s) could allow water intrusion and cause the module to become inoperative and/or cause a fire.

FCA will conduct a voluntary safety recall on all involved vehicles to inspect the power liftgate control module for evidence of water intrusion and electrical connector corrosion. Where water intrusion is identified, the vehicle will be repaired to eliminate the water intrusion. On vehicles found with corrosion in the power liftgate control module electrical connector(s), the module and electrical connector(s) will also be replaced.

All involved vehicles will then receive a waterproof power liftgate control module cover after repairs are complete.

Dealers will be notified of the launch of this safety recall by way of established methods used in the past.

We ask that you please take the time to ensure that your personnel are aware of this communication and are prepared to execute a customer friendly process for inquiries on involved vehicles.
