SUBJECT: R24 Power Distribution Center Electrical Connector Safety Recall Supplement TechTube—Available

FCA Performance Institute has released a new TechTube (**course code TT06005**).

**TT06005** TechTube supports the procedures in Safety Recall R24, affecting specific 2015 Chrysler 200s. The issue is spread terminals in one of the PDC connectors causing intermittent electrical faults. The focus of this TechTube is to supplement the 3.6L repair procedure. Refer to the recall for the complete repair procedures on both the 3.6L and 2.4L.

This TechTube provides details regarding the following:

- Identifying and accessing the proper PDC harness connector to be replaced on a 3.6L application
- Proper wire harness splicing techniques

This TechTube presentation is intended to support the recall documentation. **Always refer to the published recall procedure for the most complete and up to date procedures.**

It is the goal of FCA Performance Institute to make training as effective and convenient as possible for our dealers. Please take a moment at the end of the course to fill out the survey.

Sincerely,

FCA Performance Institute
