Safety Recall Technical Advisory (R60)

In November of 2015, FCA released Safety Recall R60 – Occupant Restraint Control Module.

Upon further investigation, it has been determined that the WG model vehicles equipped with Right Hand Drive (RHD) (sales code 5I9) **may not have a functioning seatbelt warning chime/light** after the new Occupant Restraint Control (ORC) module has been installed.

Presently there is no remedy for the condition on the above mentioned WG model RHD vehicles. FCA is working with suppliers to acquire new ORC modules for involved WG model RHD vehicles.

Until new ORC modules for WG model RHD vehicles become available, the recall cannot be performed on these models. **No attempt should be made to complete Safety Recall R60 on WG model RHD vehicles until further notice.**

NOTE: Owner letters have been mailed to customers with WG model RHD vehicles. Should a WG model RHD vehicle owner arrive at your dealership requesting Safety Recall R60, please inform the customer that **the recall has been temporarily suspended for involved WG model vehicles equipped with RHD.** They should be rescheduled for a future service appointment once the required ORC modules become available.

Thank You
