New Safety Recall Advanced Communication – R26052715

FCA US LLC announced a safety recall on certain 2003 model year (DR) RAM Trucks.

Some of the above vehicles may have been built with passenger airbag inflator housings that may rupture, due to excessive internal pressure, during normal airbag deployment events. This condition is more likely to occur if the vehicle has been exposed to high levels of absolute humidity for extended periods of time.

An airbag inflator rupture, during airbag deployment events, could result in metal fragment(s) striking, and potentially seriously injuring, the vehicle occupant(s).

FCA will conduct a voluntary safety recall on all involved vehicles to replace the passenger side airbag inflator.

Dealers will be notified of the launch of this safety recall by way of established methods used in the past.

We ask that you please take the time to ensure that your personnel are aware of this communication and are prepared to execute a customer friendly process for inquiries on involved vehicles.
