Subject: Recall instructions

Safety Recall Repair Instructions For KYMCO SUPER 8 50X and 150X Models

Potential Hazard:

When the front suspension is fully compressed, the front brake hose may come into contact with the front tire, possibly wearing a hole in the front brake hose and loss of braking.

Solution:

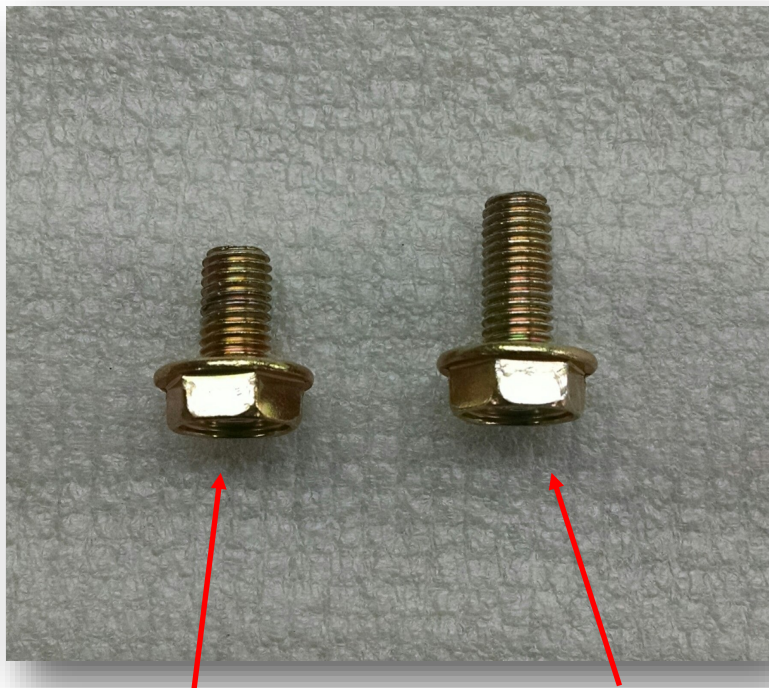

KYMCO USA will provide at no cost the hardware necessary to relocate the front brake hose clamp.

If the front brake line has sustained damage, KYMCO USA will provide a new front brake hose in addition to the relocation hardware.

Original clamp

Replacement clamp

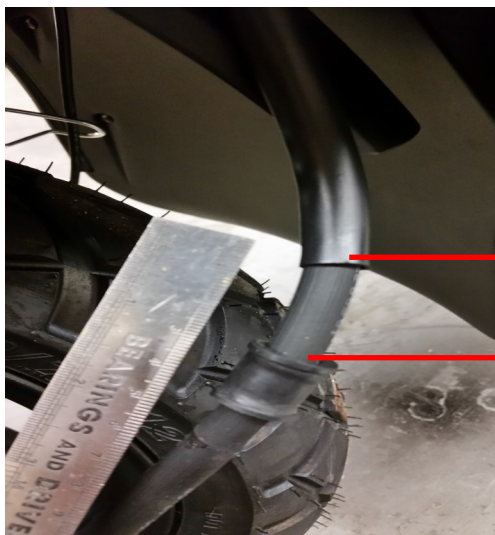

Original bolt

Replacement bolt

Using a 10mm socket, remove the two bolts holding the brake hose clamp and the reflector to the lower fork tube.

40mm

The grommet located on the existing brake hose must be relocated. Move the grommet 40mm higher than its current position. The grommet is glued to the brake hose, so you must use a small flat blade screw driver to break the grommet free from the hose. Use caution and do not damage the hose during this process.

The protective cover may need to be trimmed back in order to move the grommet 40mm. Using the provided super glue, reattach the grommet to the brake hose.

Using the supplied hardware, reattach the reflector and front brake hose to the lower fork

If the front brake hose shows ANY signs of wear, it should be replaced with part number 45126-KKD6-E00.

Please refer to the appropriate KYMCO Online Service Manual for information on performing this repair.

To receive the Recall Kit, order part number RECALL03.

Reimbursement Amount:

Hardware replacement: 0.3 Hrs. Job Code SBX50/150

Brake hose replacement: 0.8 Hrs. Job Code SBX50/150BL

If your dealership has any questions related to this recall or how to file for reimbursement, please do not hesitate to contact your KYMCO USA Technical Representative.

Thank you for your attention to this matter and for your continued support of KYMCO USA products.

Best Regards,
