Dear

What is the reason for this notice?

Our records indicate that a SAFETY RECALL has not been completed on this vehicle; refer to the address card for the affected VIN. During certain driving conditions, a combination of high stress exerted from the continuous variable transmission (CVT) programming along with potential drive pulley shafts manufactured with low hardness, the drive pulley shaft may break during operation. If the drive pulley shaft breaks the vehicle may lose acceleration or the front wheels may lock up, increasing the risk of a crash.

What should you do?

Call any authorized Honda dealer and make an appointment to have your vehicle's CVT software updated. This work will be done *free of charge*.
