Description of Defect :

Description of the Defect : PT. Gajah Tunggal Tbk, manufacturer of the subject tires, has determined that the subject tires may be prone to developing a crack in the lower sidewall area of the tire.

FMVSS 1 : NR

FMVSS 2 : NR

Description of the Safety Risk : The cracking could result in air pressure loss and, in a worst instance, the air pressure loss could disable the tire. If the tire is not replaced, the loss of air pressure could result in a potential loss of control of the vehicle and increase the risk of a vehicle crash.

Description of the Cause : The crack may be attributable to an anomaly in the lower sidewall area of the tire and can manifest into an external visible crack usually after the tire is in service for several months.

In most instances, the crack happens on one side of the tire (OSS or opposite serial side), that is usually mounted inboard on the vehicle thereby making visual detection difficult.

Identification of Any Warning that can Occur : A visible crack on the lower sidewall of the tire.
