Description of the Safety Risk : Carbon monoxide poisoning and or death

Description of the Cause : The refrigerator cabinet is not 100% sealed to the main cabin which could permit carbon monoxide to enter the main cabin.

Identification of Any Warning that can Occur : Carbon monoxide detector alarm going off.

Supplier Identification :**Component Manufacturer**

Name : NR

Address : NR

NR

Country : NR

Chronology :

On March 11th, 2016 one of our dealers in the field notified us of a potential defect stating that while they were doing their pre-delivery inspection they could smell the refrigerator burning off, leading them to believe that the compartment was not sealed to the main cabin. Upon notification an immediate audit was done of the manufacturing facility where visual confirmation of units in production validated the dealers concern. All units were quarantined to our grounds and production facility.

Description of Remedy :

Description of Remedy Program : NR

How Remedy Component Differs from Recalled Component : NR

Identify How/When Recall Condition was Corrected in Production : NR

Recall Schedule :
