New Safety Recall Advanced Communication – S39051116

FCA US LLC (“FCA US”) announced a safety recall on certain 2016 model year (KL) Jeep Cherokee.

Some of the above vehicles may have been built with a right front halfshaft that was not heat treated properly during the manufacturing process. An improperly heat treated right halfshaft could fracture without warning. A fractured right halfshaft could damage underbody components and cause a crash without warning.

FCA US will conduct a voluntary safety recall to replace the right front halfshaft.

Dealers will be notified of the launch of this safety recall by way of established methods used in the past.

We ask that you please take the time to ensure that your personnel are aware of this communication and are prepared to execute a customer friendly process for inquiries on involved vehicles.
