From: Brad Ortloff, Manager of Campaign Administration

Subject: 2007-11 CR-V Front Passenger's Airbag Inflator Kit – INSPECT BEFORE INSTALLATION-**UPDATE**Yesterday, May 15th, American Honda identified a concern with the following airbag inflator kit:

Part Number	Part Description	Action
04790-SWA-407	2007-11 CR-V Front Passenger's Airbag Inflator Kit	Inspect Before Installation

This kit is part of service bulletins:

16-048: *Safety Recall: Takata Front Passenger's Airbag Inflator (Phase 1)*; and17-002: *Safety Recall: Takata Front Passenger's Airbag Inflator (Phase 2)*

Prior to beginning repair on any 2007-11 CR-V vehicle with part number 04790-SWA-407, ensure that the wire harness included in the kit is correct according to the attached image.

Today, we are requesting an **additional** inspection procedure to ensure that you are using a good inflator kit.

- The yellow wire should measure 225mm and the red wire should be 530mm (image attached).
- The incorrect wire harness will also have a black felt tape around the red wire near the 2 pin prong that is in the center of the wire harness (image attached).
- Do **not** replace the incorrect harness with a harness from another kit; you **must** keep the incorrect harness within the inflator kit packaging that it was originally shipped.
- If the harness does not match the correct images, keep the kit separate from your other stock and email the following information to ahm_inflator_swap@ahm.honda.com with the subject line "PN 04790-SWA-407 Harness Issue":
 - Dealer #
 - Dealer Contact Info
 - Part Number (should be 04790-SWA-407)
 - Kit Lot Date (on Honda Label on outside of box)
 - Kit Serial # (on white label on outside of box)
- If the wire harness is correct, you may proceed accordingly and install the inflator kit per the applicable service

bulletin. Please continue to repair vehicles using good inflator kits.

Please click [here](#) for the attached image.

Thank you very much for your understanding and cooperation!

UPDATED INFORMATION

The RED wire should measure 530 mm which runs the entire length of the harness (from the 4 pin prong to the 2 pin prong at the end)

GOOD

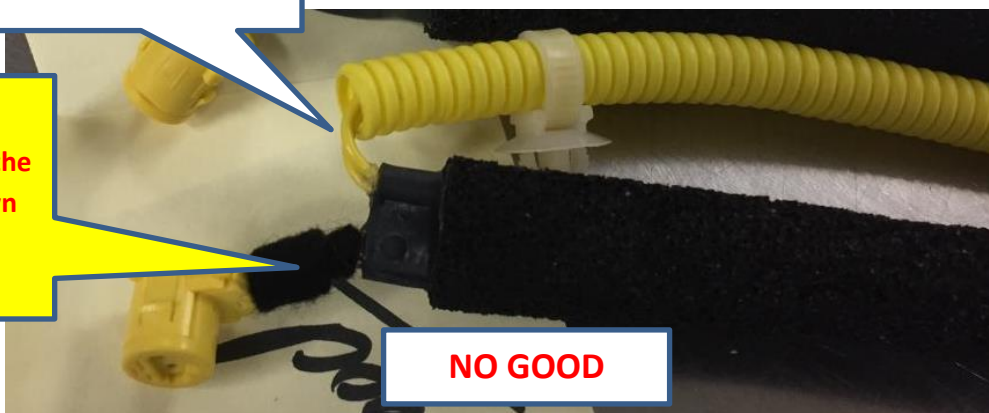

The YELLOW wire should measure 225 mm (from the 4 pin prong to the center 2 pin prong)

GOOD

This is the incorrect wiring harness. The yellow wire was INCORRECTLY installed. (DO NOT USE!)

Black felt tape should not cover the red wire as shown here

NO GOOD

ORIGINAL PHOTOGRAPHS

This is the correct wiring harness you should see for this kit. The red wire should run through the full length of the harness from the 4 pin prong to the 2 pin prong.

GOOD

GOOD

Red wire should run from the 4 pin to 2 pin prong

4 pin prong

2 pin prong
