## **New Safety Recall Advanced Communication – S58081016**

FCA US LLC (“FCA US”) announced a safety recall on certain 2015 model year (DJ/D2/DD) RAM Trucks.

Some of the above vehicles may have been built with inadequate front track bar frame bracket welds. A broken track bar frame bracket weld(s) could cause the bracket components to separate from the frame and diminish steering response. A change in the vehicle’s handling characteristics could cause a crash without warning.

FCA US will conduct a voluntary safety recall to inspect the frame and either weld a new track bar bracket to the original frame or replace the original frame with a new frame.

Dealers will be notified of the launch of this safety recall by way of established methods used in the past.

We ask that you please take the time to ensure that your personnel are aware of this communication and are prepared to execute a customer friendly process for inquiries on involved vehicles.
